SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Rexford Industrial Realty, Inc. (Rexford, or the "Client") to perform a Phase I Environmental Site Assessment (ESA) and Phase II subsurface investigation of the property located at 14005 Live Oak Avenue in Irwindale, California[1] (herein referred to as the "facility" or the "site;" see Figures 1 and 2). Ramboll's assessment was conducted in connection with a potential purchase of the site.

The objective of the Phase I ESA, which was conducted in accordance with the scope and limitations of American Society for Testing and Materials (ASTM) International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard") and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312), and the scope of services identified in the February 5, 2021 Master Environmental Consulting Services Agreement (MSA) between the Client and Ramboll, was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard (see Section 8).

1.1 Site Summary

H. N. and Francis C. Berger Foundation, a Delaware Corporation, owns the two-story BNY Mellon-occupied office building located in Irwindale, California. The approximately 5.12-acre site includes one parcel with the following Assessor Identification Number (AIN): 8535-001-033.

The site is improved with one approximately 56,510-square-foot building and associated surface parking areas. The site has been occupied by BNY Mellon (formerly The Bank of Mellon) since at least 2003 for the purpose of conducting investment banking payment processing activities.

Historically, between the 1940s and the 1990s, the site was part of a larger concrete pipe manufacturing operation operated by US Pipe and Foundry. Two on-site buildings associated with the manufacturing operation were demolished in c. 1992. The current two-story building and associated surface parking lot were constructed in 1992. Between 1992 and 2003, Hughes Markets Incorporated occupied the office building. Since at least 2003, the site has been utilized by Mellon (later BNY Mellon) as a bank payment processing center.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site located at 14005 Live Oak Avenue in Irwindale, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.5 of this report. This assessment has revealed no RECs in connection with the site.

1.2.1 Historical RECs (HRECs)

The following HRECs related to potential contamination concerns were identified:

- **1986 and 1989 Removal of USTs and Sump**. A filling station formerly was located on the site. Filling station operations included the use of three USTs (one 10,000-gallon diesel fuel, one 10,000-gallon gasoline, and one 1,000-gasoline USTs) which were removed from the site in 1986. During the removal of the former fuel tanks, five soil samples were collected from the tank excavation area and each sample was analyzed for petroleum hydrocarbons; detected TPH concentrations in the five samples ranged from less than 10 mg/kg to 560 mg/kg. The LACDPW issued a letter on February 10, 1987 stating the soils were not suitable as fill material and must be

[1] A former address associated with the site is listed as 14041 Live Oak Avenue, Irwindale, California.

manifested and transported to a hazardous waste disposal facility. The contaminated soil was removed for offsite disposal. Additional sampling was performed in 1987 in the area of the previous 1,000-gallon UST, as requested by the Los Angeles Fire Prevention Division because the two soil samples collected in this area during the 1986 sampling event detected TPH concentrations at 560 and 200 mg/kg. Two soil samples were collected from the 1,000-gallon tank excavation area, one from the east end and from the west end. Each sample was analyzed for TPH and TPH was not detected in either sample. On March 30, 1987, closure was granted for the three tanks, and a NFA status letter was issued for the three USTs by the LACDPW.

In March 1989, two additional USTs (a 3,000-gallon waste oil UST and associated 500-gallon sump (a.k.a. a UST) with a corresponding motor oil AST) that were not associated with the filling station were removed from the site under the oversight of the LACDPW, Waste Management Division. Soil samples collected beneath the north and south ends of the 3,000-gallon tank were analyzed for TRPH and volatile aromatics. Detections of TRPH ranged from 33 to 4,780 mg/kg. One sample indicated low levels of toluene (0.58 mg/kg). According to the LACDPW, the reported acceptable level of petroleum hydrocarbons to be left in soil was 100 mg/kg, and therefore, the TRPH-impacted soil was excavated in April 1989. An additional eight samples were collected beneath the 3,000-gallon tank following excavation activities and indicated TRPH in soils ranged from less than 1 mg/kg to 93.8 mg/kg. Closure was issued by the LACDPW on February 25, 1991.

- **1991 Removal of Underground Storage Tanks (USTs).** As stated above, a filling station formerly was located on the site. Filling station operations included the use of five documented USTs, two of which (one 10,000-gallon diesel fuel and one 10,000-gallon gasoline USTs) were removed from the site in 1991 and the remaining three of which were removed in 1986 (described under HRECs, Section 6.1.2). With regard to the two USTs removed in 1991, soil samples were collected from beneath the tanks to evaluate if soils had been impacted by the potentially leaking USTs; analytical results indicated non-detect concentrations of total petroleum hydrocarbons as gasoline (TPHg) beneath the gasoline tank and low concentrations of total recoverable petroleum hydrocarbons (TRPH) below the diesel fuel tank. Additional samples subsequently were collected beneath the diesel fuel tank to assess the magnitude and extent of the TRPH impacts; soil samples were non-detect for TRPH but indicated low concentrations of toluene, xylenes, and ethylbenzenes. The impacted soil was removed and stockpiled on-site and later moved to another location off-site in case further treatment was deemed necessary. According to documents reviewed by Ramboll, no soil stockpiles were left at the site. A closure report was submitted to the Los Angeles County Department of Public Works (LACDPW) in 1991, however, the LACDPW subsequently requested additional sampling (including sampling and testing for methyl-tertiary-butyl [MTBE]) prior to granting closure. A 2000 soil boring investigation was completed in the area of the former USTs with the goal of obtaining closure status for the two formerly 10,000-gallon USTs during which five additional soil borings were drilled and sampled for TPH and metals at locations around the former USTs. Results of the laboratory analysis during the 2000 investigation "showed no indication of petroleum hydrocarbons remaining in the soil, and lead concentrations were indicative of background levels in soil for the area." Following the additional investigation, the LACDPW issued closure certification on September 14, 2005 for the two former USTs removed in 1991.

1.3 Other Findings

Although not considered to be RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Past Industrial Operations at the Site.** Between the late 1940s and the early 1990s, the site, as part of a larger property (US Pipe and Foundry), was used in concrete pipe manufacturing operations. Operations related to the pipe manufacturing company conducted at the site included a headquarters office building, a large automotive service garage (with a waste oil sump and associated tank), and gasoline/diesel fuel filling station (with several underground storage tanks [USTs]), a cesspool (septic tank), and a railroad line with loading and unloading activities. These former industrial operations included or may have included the use of petroleum products, solvents, adhesives, paints, metals, acids, caustics, corrosives, and/or other chemicals, including potential solvent use in the service garage area. Subsurface investigations performed at the focused on the removal and subsequent assessment of former USTs at the site (as described in the ensuing sections of this report), and limited soil sampling was performed in the vicinity of the service garage and cesspool including trenching and surface sampling. Soil samples were tested for solvents, CAM metals and benzene, toluene, ethylbenzene, and xylenes (BTEX). Samples collected around the former cesspool indicated low concentrations of ethylbenzene (3 micrograms per liter [µg/L]), below screening levels. The one soil sample collected around the garage area did not detect volatile organic compounds (VOCs) via USEPA Method 8240. Ramboll requested information from the Los Angeles Regional Water Quality Control Board (LARWQCB) and additional agencies (see Section 2.1) for the current and former site addresses in an attempt to further assess environmental concerns associated with the former industrial operations performed at the site; however, only limited information has been provided to date. To address the largely unknown historical features and nature of historical activities, Ramboll conducted a subsurface investigation at the site that included collection of soil and soil vapor samples in January 2022. Based on the results of the limited soil and soil vapor sampling conducted as part of this subsurface investigation, Ramboll concluded the following: total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) were not detected in soil above applicable screening criteria; arsenic was the only metal detected in soil at concentrations above screening levels but below established California background levels. In soil vapor, no VOCs were reported above applicable DTSC/USEPA commercial existing building screening levels using the 0.001 attenuation factor (AF). Benzene was reported in only one sample above applicable DTSC/USEPA commercial existing building standards using the screening level calculated using the highly conservative 0.03 AF. Based on the subsurface investigation conducted by Ramboll (see Section 6 for additional details), it is unlikely the historical operations have significantly impacted the subsurface and no additional sampling is recommended.
- **San Gabriel Valley (Area 2) Baldwin Park, CA National Priorities List (NPL).** The site is located within the Baldwin Park Operable Unit (BPOU) of the San Gabriel Valley superfund site, which comprises approximately eight square miles of contaminated groundwater. The main contaminants of concern are chlorinated volatile organic compounds (VOCs), namely tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride, perchlorate, n-nitrosodimethylamine, 1,2,3-trichloropropane, and 1,4-dioxane. Since 2006, groundwater plumes have been controlled through the use of groundwater extraction wells, treatment of VOCs with air stripping or liquid phase granular activated carbon (LPGAC), ion exchange, and ultraviolet light and hydrogen peroxide system. Treated groundwater is conveyed to the public water

distribution system. The most recent "Five-Year Review" was completed in 2017 and concluded that the superfund site remedy continued to be protective of human health and the environment. Although the site is located within the boundaries of the BPOU, according to the most recent Annual Performance Evaluation Report conducted by the EPA (dated April 2021) which includes the BPOU, the site is located at least 0.7-mile crossgradient of the identified VOC contaminant plume.

The site is listed in the Well Investigation Program (WIP) database related to the BPOU site investigation. The WIP is a program that was implemented to identify facilities that may have contributed to groundwater impacts associated with San Gabriel Valley Area 2. The status of the WIP listing for the site is listed as "backlog;" however, no subsurface investigations appear to have been conducted at the site with respect to the WIP listing. The WIP program is no longer in use. Existing WIP cases that are still begin assessed or remediated are overseen under the SLIC Program. A listing of "backlog" is not anticipated to cause for concern to the site.

Based on the available information, there is no indication that groundwater contamination associated with the BPOU is migrating to the site. If contamination associated with the BPOU is found to have migrated onto the site, it is expected that any investigation/remedial activities would be the responsibility of the entity(ies) named in the listing or other designated responsible party and not the owner of the Property.

A discussion of *de minimis* conditions, and non-scope considerations identified during this review is presented in Section 6 of this report.

2. INTRODUCTION

2.1 Scope of Work for the Phase I

Ramboll was retained by Rexford to conduct a Phase I ESA of the site in Irwindale, California. The Phase I ESA relied upon the references noted below and included the following tasks consistent with the ASTM Standard and the scope of services identified in the MSA between the Client and Ramboll:

- A visit to the site by Stephanie Eckelman of Ramboll on December 6, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Limited photographs taken during the site visit[2] are presented in Appendix A.
- An interview during the site visit with the following individual (year of initial hire at the site indicated in parentheses): Lourdes Paez, Facility Manager with BNY Mellon (2014). The aforementioned individual is referred to herein as "facility personnel." The facility personnel interviewed by Ramboll was identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR, Inc. (EDR; see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The USEPA's EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - A review of the California Water Resources Control Board's GeoTracker website (GeoTracker), which provides information with respect to releases to soil and groundwater in the site vicinity.
  - A review of the California Department of Toxic Substances Control's (DTSC's) EnviroStor (EnviroStor) website, which provides information with respect to property cleanups in the site vicinity.
  - A review of the California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.
  - A review of the National Pipeline Mapping System (NPMS) Public Viewer website, which provides information regarding the locations of hazardous liquid and gas pipelines on and in the vicinity of the site.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.

[2] Due to security concerns, the facility personnel requested photos be limited to storage closets and exterior photos only.

  - Historical and site-specific information obtained from the Los Angeles County Assessor Portal, the LACDPW, and the Los Angeles County Fire Department – Health Hazardous Materials Division (County Fire Department - HHMD) for the current site address. In addition, Ramboll requested records from the County Fire Department – HMMD for the former site addresses; however, personnel from this agency reported having no records pertaining to the former site addresses. Ramboll also requested information from the following local agency for the current and former site addresses: City of Inglewood Building Department (Building Department),. Lastly, Ramboll requested information from Los Angeles County Public Health Investigator (PHI); however, the agency referred Ramboll to the Fire Department - HHMD for records pertaining to the site (see above).
  - A Freedom of Information Act (FOIA) request to the DTSC and LARWQCB for information related to the site. Pertinent historical and site-related information contained in the DTSC and LARWQCB records has been incorporated into the appropriate sections of this report.
- A review of documents available on the GeoTracker database and in the LACDPW records, including the following:
  - *Soil Sample Analysis for United Concrete Pipe Company at 14041 Live Oak Drive, Baldwin Park*, prepared by Brown and Caldwell and dated January 1987 (the "1987 Brown and Caldwell report");
  - *Tank Closure Report prepared for Rudy's Service Station,* prepared by Terra Tech Labs, Inc., dated July 8, 1989 (the "1989 Tank Closure Report").
  - *Preliminary Endangerment Assessment (PEA) for the United Concrete Pipe Manufacturing Facility*, prepared by Woodward-Clyde Consultants, dated June 14, 1990 (the "1990 PEA").
  - *Soil Boring Investigation Former Hughes Market Facility, LACDPW Closure Permit #7963B*, prepared by URS/Dames & Moore, dated November 1, 2000 (the "2000 Soil Boring Investigation").
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, and/or hydrologic sources as provided in the EDR database report and previous investigation reports, as listed above.
- A review of a Preliminary Title Report issued by Chicago Title Company for the site on October 27, 2021.
- A review of any information provided by the User of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Rexford in a Work Order entered into in November 2021. Although Ramboll did not conduct surveys for the presence of asbestos, lead-based paint, mold, or radon, an assessment of the potential presence of such was evaluated based solely on the date of construction of the building at the site for the potential presence of asbestos and lead-based paint, information provided during the site visit for the potential presence of mold, and information provided in the EDR report for the potential presence of radon.

2.2 Scope of Work for the Phase II Subsurface Investigation

- Pre-Field Activities, Mobilization, Geophysical Survey and Utility Clearance,
  - Prepare a Health and Safety Plan, notify Underground Service Alert (Dig Alert), and contract with a private utility subcontractor. The geophysical contractor cleared proposed boring locations for obstructions or anomalies.
- Soil and Soil Vapor Sampling
  - Advance 11 soil borings at the site and collect soil samples for analysis.
  - Install temporary soil vapor probes and collect soil vapor samples for analysis.
- Data Evaluation and Reporting
  - An analysis and review of the findings from the sampling event are included within this report.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered likely to represent an environmental concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of Rexford Industrial Realty, L.P. and/or its subsidiaries, as their interests may appear, for the transaction at issue concerning the site and may not be relied upon by any other person or entity without Ramboll's prior express written permission, except as set forth in the Master Services Agreement between Ramboll and the Client (the "MSA"). In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA shall control.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, Ramboll can neither warrant nor guarantee the extent to which the information provided to Ramboll was accurate and complete; however, Ramboll evaluated the reliability and thoroughness of such information. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this

report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

Other issues considered outside the scope of the ASTM Standard and this review include regulatory compliance, lead in drinking water, wetlands, polychlorinated biphenyls (PCBs) in building materials, cultural and historical resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

BNY Mellon leases the two-story office building located at 14005 Live Oak Avenue in Irwindale, Los Angeles County, California. The approximately 5.12-acre site is located approximately 2 miles north of the City of Baldwin Park.

According to the Los Angeles County Assessor Portal, the assessor's identification number (AIN) for the site is 8535-001-033. The site is improved with an approximately 56,289-square-foot two-story office building, which is located in the central portion of the site. The remaining portions of the site are improved with landscaping and surface parking areas. Additional features on-site include two diesel fuel powered emergency generators located along the northern edge of the building, and a guard shack located along the western site entrance.

The primary site access is via Stewart Avenue at the western site boundary. Additional site access is via Live Oak Avenue to the south of the site. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 417 feet along the northeastern site boundary to 409 feet along the southwestern site boundary.
Topographic Gradient	USGS topographic map; visual observations; Google Earth	Relatively flat on-site, with a gentle downward slope to the southwest. Regional topography slopes generally south-southwest.
Local Land Use	Visual observations	The facility is located in a predominantly commercial land use area. North: Rivergrade Road, followed by AP Express Champion Logistics warehouse and shipping company, Charlies Produce, Cacique Inc and WorldPack AP Express warehouse. West: The site is bounded on the west by Steward Avenue, followed by Condor Outdoor Products warehouse with a Shell Gas station beyond. South: Live Oak Avenue, followed by Cremi Mix Inc. (dairy supplier), Kids Cars LA-Ride on Cars (toy store), and a residential area. Southeast: Waste Management headquarters and truck parking. East: To the northeast a semi-truck parking lot and vacant land with Arrow Highway beyond. Directly east is a vacant, undeveloped parcel of land. Ramboll did not observe any conditions on adjacent properties that indicate a potential contamination concern to the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Nearest Residence	Google Earth	Approximately 520 feet south of the site beyond Live Oak Avenue.
Hydrology		
Storm Water Runoff	Visual observations	Stormwater follows a slight slope southwest on the site and drains to stormwater drains located through the site which discharge to drains located along Live Oak Avenue or Stewart Avenue.
Nearest Surface Water Body to the Site	USGS topographic map	The facility is located approximately 0.75 mile southwest of the Santa Fe Dam Recreational Area.
Flood Plain	FEMA*	The site is located outside of a flood zone.
Wetlands	NWI*	There are no federally-designated wetlands on-site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; EPA Superfund Sites webpage	Based on topography, groundwater flow direction is anticipated to flow to the south-southwest. According to the information provided on the EPA Superfund webpage, groundwater flow monitored for the San Gabriel Superfund Site indicates groundwater flow is generally to the southwest.
Depth to Groundwater	GeoTracker; 1990 PEA	Information is not available for the site. According to information provided in the United Concrete PEA, in a well sampled east of the site on the adjacent property, groundwater is anticipated to be deeper than 170 feet below ground surface (bgs).
On-site Wells	Visual observations; CalGEM; Database report	No oil and gas, monitoring, or production wells on the site.
On-Site Hazardous Liquid and Gas Pipelines	NPMS Public Viewer website	There are no gas transmission or hazardous liquid pipelines on or within 0.25 mile of the site.
Nearest Groundwater Supply Wells	Database report	There are no public water supply wells located within one mile of the site. Numerous State registered private or municipal wells that may be used for water supply are located within one mile from the site.
Geologic Conditions	1990 PEA	According to the 1990 PEA, soils in the vicinity of the site consist of sands with gravel. Alluvial deposits consist primarily of gravel, sand, silt, and clay.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Site Utility Information		
Heating and Cooling Equipment	Visual observations; Facility Personnel	Natural-gas fired heating units supply building heat. The building is cooled with four large air conditioning units.
Natural Gas Service	Facility Personnel	The site is provided with natural gas service by Southern California Gas Company.
Use of Fuel Oil for Building Heat	Facility Personnel	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Facility personnel	The facility receives drinking water from the Los Angeles County Water District.
Sanitary Sewer	Facility personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Visual observations; Facility personnel	No current septic systems were observed on the site. One historic cesspool (septic system) was formerly located at the site west of the current building.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

3.2 Current Use of Site

3.2.1 Current Operations

The site is currently occupied by BNY Mellon as a processing center which involves the accepting of payments and transactions from customers, processing same, and submitting the funds to the business's bank account. Ancillary operations at the facility include administrative and janitorial activities. Building, diesel fuel emergency generator, and hydraulic elevator maintenance, as well as landscaping and pest control services, are contracted to outside vendors. The facility does not maintain any raw materials and does not conduct any manufacturing or fabrication activities at the site. Janitorial supplies, including hand soap and sanitizer, are used in small quantities (containers of one gallon and smaller). Petroleum use (hydraulic oils and diesel fuel) on site includes two hydraulic elevators and an emergency generator, respectively. Facility personnel knew of no use of chlorinated

solvents by the Company. According to facility personnel, BNY Mellon's operations have remained generally consistent during its period of occupancy at the facility.

3.2.2 Waste Management

Hazardous wastes are not routinely generated at the site, other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries).

Nonhazardous waste generated at the site consists of general trash. General facility trash is collected in an on-site uncovered dumpster for removal by Athens Services. The dumpster is positioned on pavement in the northeastern portion of the parking lot.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and kitchen areas, is discharged to the municipal sanitary sewer system. The facility does not generate process wastewater other than floor mop water, which is discharged to the municipal sanitary sewer system from sinks located in the janitorial closets.

Storm water at the site enters storm drains in paved areas of the site. These storm drains discharge the storm water to the municipal storm sewer systems located on Live Oak Avenue or Stewart Avenue.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products from the facility's natural gas fired backup generators and comfort heating system.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in November 2021 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM Standard.[3] A copy of the EDR database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by EDR (see Appendix B) and also searched the California GeoTracker and EnviroStor databases. The site is listed on several environmental databases, as discussed in Table 2. As noted previously, the site historically was part of a larger 74-acre property listed as 14041 Live Oak Avenue. Therefore, many of the listings for the site address were not for features/issues on the site but pertain to features/issues on the larger property.

Table 2: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Ralphs Grocery Company (former Hughes Family Market) is listed on the Los Angeles County Hazardous Materials System (HMS), Cleanup Program Sites Spills, Leaks, Investigations and Cleanups (CPS-SLIC), and California Environmental Reporting System (CERS) databases. The CPS-SLIC and CERS listings relate to the removal of a 2,000-gallon waste oil UST located on the adjacent parcel to the east in April 1991. During tank removal, confirmation sampling indicated petroleum impacts were reported beneath the former UST. Following excavation activities, confirmation soil samples indicated low concentrations of TPH remained in soil at the site. The Los Angeles Co HMS permit is listed as closed.	Ramboll reviewed GeoTracker and agency documents regarding the CPS-SLIC investigation and determined that the listing was associated with the adjacent property and not the site, and that there was no indication that this subsurface soil release had adversely impacted the site. Thus, this listing is not further discussed.
Hughes Markets is listed on the Resource Conservation and Recovery Act - Small Quantity Generators (RCRA-SQG) database as a hazardous waste generator. According to the database, no manifests were generated from the site. No violations were reported. Ralphs Grocery Co is listed in the DTSC Hazardous Waste Tracking System (HWTS) database for generating hazardous wastes including 0.231 ton of aqueous solution with total organic residues less than ten percent in 1996.	These listings do not suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2

[3] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 2: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Ralphs Grocery Co/ Hughes Markets Inc. is listed on the Statewide Environmental Evaluation and Planning System UST (SWEEPS UST) and UST databases for three 12,000-gallon diesel fuel USTs located at the site (later determined to be off-site adjacent to the northeast) with an "active" status as of August 11, 1992. No further information is provided in the database.	A review of GeoTracker documents indicated that two 12,000-gallon diesel fuel UST and one 12,000-gallon gasoline USTs were removed from the adjacent property to the north of the site in 2003 on behalf of The Realty Associated Fund V. L.P. The USTs were reportedly installed in 1992 and last used in 1998. Records reviewed from the LACDPW indicated the USTs were located on the adjacent parcel to the north (and not on the site) which formerly shared an address with the site. The USTs received closure from the LACDPW following the removal of gasoline-impacted soil. The USTs are not a concern to the site.
The Realty Associates Fund is listed on the LOS ANGELES CO. HMS database, likely pertaining to the former closed USTs removed from the adjacent property listed/described above.	The listing is for an adjacent property and does not suggest a contamination concern to the site.
The Koll Co./United Concrete Pipe, 14041 East Live Oak Avenue, is listed on the Leaking Underground Storage Tank (LUST), CPS-SLIC, LA Co. Site Mitigation, RCRA-SQG, and CA ENVIROSTOR databases. As noted previously, the 14041 East Live Oak address is for the larger property, including the site. The ENVIROSTOR database lists the status as a Historical Site with No Further Action as of September 1990. A Preliminary Endangerment and Assessment Report was prepared for the entire property including the site in June 1990. The EDR database indicated the entire property including the site was issued a NFA status "*based on lack of significant hazardous constituents in the soil. Mineral oil was the primary contaminant in the soil (located on the adjacent property) which is not considered to be hazardous. The site manufactured large concrete pipe sections to be used for pipelines and sewers*". No contaminants were reportedly detected in the soil. The site address (listed as City of Irwindale) transported 0.417 ton (two 55-gallon drums) of unspecified oil-containing waste from the site address in 2010. It is unclear if this listing was for the site or adjacent property. In 1989, 1X United Concrete Pipe Corp transported 5.125 tons of asbestos containing waste and 120 tons of contaminated soil from a site clean-up. This listing likely pertains to former building demolition activities in preparation for the current building construction as well as adjacent property construction activities.	These listings are further discussed in Sections 4.4. and 6.1.

Table 2: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
The site address listed as United Concrete Pipe is listed on the LUST database. It is unclear if this listing was for the site or adjacent property. The site address listed as The Koll Co/United Pipe Concrete is listed on the CPS-SLIC database with an Open-Inactive status as of 1965. The lead agency is the LARWQCB. The LA Co. Site Mitigation database indicated the site was abated on May 1, 1991. The CERS listing relates to the site being a Cleanup Program Site. As noted in Section 6, the site received closure from the LARWQCB. It is unclear if this listing was for the site or adjacent property. GeoTracker database documents indicate at least seven diesel fuel and gasoline USTs (between 1,000 and 10,000 gallons in size) were listed at the site as being installed between 1940 and 1979.	
The site address (noted as Hughes Markets at 14005 Live Oak) as well as the larger property are listed on the WIP database pertaining to its association with the San Gabriel Valley Area 2 National Priorities List.	The site and the larger property are listed in the WIP database related to the San Gabriel Valley (SGV) site investigation. The SGV is a regional National Priorities List (NPL) property, with known and potential groundwater contamination extending across a wide geographic area. The status of the site is listed as "Backlog." The WIP is a program that was implemented to identify facilities that may have contributed to the groundwater plume associated with the SGV Area 2. The WIP program is no longer in use. Existing WIP cases that are still begin assessed or remediated are overseen under the SLIC Program. This matter is further discussed in Sections 4.4 and 6 of this report.

Notes:

* The site address is also listed on the following databases related to regulatory compliance: Enforcement and Compliance History Information (ECHO), Hazardous facility and manifest data (HAZNET), EMI and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination.

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed on Table 3 on databases indicative of a potential contamination concern.

Table 3: Contamination-Related Database Listings for Adjoining Properties 1

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Fuller & Associates/Sunburst Drapery Cleaners Fireproofing 14160 Live Oak Ave (adjacent to the south)	The property is listed on the EDR Historical Cleaners database from 1986 through 2014. The property is listed as using perchloroethylene (PCE) in 1984. The property utilized a "dry to dry" non-vent perchloroethylene machine equipped with a vapor recovery unit with a compress and condenser. The property is listed on the CPS-SLIC database as a Cleanup Program Site with contaminants of concern including PCE and TCE impacts to drinking water. The status of the property is "Open-Site Assessment" as of March 2018.	According to documents reviewed on GeoTracker for the property, subsurface investigations have been ongoing at the property since 1996 under regulatory oversight by the LARWQCB. Multiple subsurface investigations (soil and soil vapor) conducted at the property indicate the bulk of PCE impacted soil remains beneath the building with the most recent maximum PCE detections up to 6.5 micrograms per kilogram (µg/kg) at five feet bgs. No TCE was detected above laboratory reporting limits. The most recent investigation included the installation of three multi-nested soil vapor wells installed at the property between 5 and 40 feet bgs to monitor PCE in the soil vapor. Indoor air sampling did not indicate the presence of PCE or TCE above DTSC screening levels. Although indoor air samples did not detect PCE or TCE, the LARWQCB required additional subsurface vapor sampling to assess potential health risks to residents south of the property. Additional subsurface sampling planned includes installing a soil vapor well to a depth of 80 feet bgs along the southern portion of the property. Groundwater was not encountered during the multiple subsurface investigations conducted at the property. Because this off-site and downgradient property is currently under active oversight by the state agency, and its soil vapor plume has been defined to be at least 900 feet southeast and downgradient of the site, it is unlikely that this property has the potential to impact the site. Thus, this off-site and downgradient listing does not represent a significant environmental concern to the site.
Irwindale MRF and Transfer Station 220 Arrow Highway (Adjacent to the east of the site)	The property is listed on the Solid Waste Information System (SWF)/Active, Closed or Inactive Landfills (LF) database.	The property is listed as a "proposed/planned" transfer station (non-disposal only) property for construction/demolition waste and recycling only to be operated by Athens Services. Due to the planned operation status, this off-site listing does not represent a significant environmental concern to the site.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
The Realty Associates Fund VLP (former Hughes Family Market) 5305 North Rivergrade Rd (adjacent to the northwest)	This property (formerly listed under the same address as the site) is listed on the LUST database with a Case Closed status.	Ramboll reviewed GeoTracker documents which list three former USTs removed from the property in 2003. Excavation activities conducted included the removal of 47 tons of petroleum impacted soil. At the direction of the LACDPW, additional confirmation sampling was conducted in 2005. The results of the assessment indicated total petroleum hydrocarbon impacts as gasoline (maximum concentration of 240 mg/kg) and diesel fuel (maximum concentration 7,800 mg/kg) were limited to shallow soils in the vicinity of the former fuel dispensers at depths of approximately 20 feet bgs. The LARWQCB. granted closure to the property in March 2007. Based on the localized soil contamination and the case closed status of this property, this off-site listing does not represent a significant environmental concern to the site.
Multiple Properties (Adjacent to the south across Live Oak Avenue)	Several properties located adjacent to the south of the site beyond Live Oak Avenue are listed in the CA WIP database with a status reported as either "historical" or "not reported." No further information is provided.	The properties are listed in the WIP database related to the "SGV Area 2 site investigation." The WIP is a program that was implemented to identify facilities that may have contributed to the groundwater plume associated with the SGV Area 2 that is discussed above. The WIP program is no longer in use. Existing WIP cases that are still begin assessed or remediated are overseen under the SLIC Program. This matter is further discussed in Sections 4.4 and 6 regarding the SGV Area 2 NPL.

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.

4.1.3 Database Review for Other Surrounding Properties

Ramboll identified one non-adjoining property that represents a potential contamination concern to the site due to past releases on this property and possible migration onto the site, as detailed in Table 4.[4]

Table 4: Summary of Environmental Database Listings for Surrounding Properties that Represent a Potential Contamination Concern

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
San Gabriel Valley (SGV) Area 2- BPOU Sunset & San Bernardino Freeway Baldwin Park (approximately 0.7 mile southeast)	SGV is a regional NPL, with known and potential groundwater contamination extending across a wide geographic area. The contaminants of concern are chlorinated VOCs (specifically PCE, TCE, carbon tetrachloride, perchlorate, n-nitrosodimethylamine, 1,2,3-trichloropropane, and 1,4-dioxane), and the contamination has migrated off-site to the southwest.	The SGV Area 2 is a Superfund listing for groundwater contamination underlying portions of the cities of Azusa, Irwindale, Baldwin Park, West Covina, La Puente, and Industry. The SGV Area 2 is currently undergoing groundwater remediation under the supervision of USEPA. Potentially Responsible Parties (PRPs) have been named and do not include current or prior occupants of the site, and the Company is not considered a PRP for the Superfund listing. The site is located within the BPOU, however, plume maps indicate that the extent of groundwater contamination has been delineated to within 0.7 mile east of the site with a groundwater flow direction to the southwest. Groundwater remediation including five large ground water treatment systems is ongoing. The USEPA periodically monitors the air inside homes and businesses where vapor intrusion was found. Vapor intrusion evaluation is on-going; however, details of which homes or businesses are being monitored was not provided. The contamination is being addressed with regulatory oversight. Based on the available information, there is no indication that groundwater contamination associated with the BPOU is migrating to the site and it is therefore not a significant environmental concern. This matter is further discussed in Section 6.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by EDR. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by EDR; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site other than the following: General American Life

[4] In its evaluation, Ramboll considered only non-adjoining properties listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the site from the noted off-site property are unlikely).

Insurance is listed at East Live Oak and Rivergrade Road, adjacent to the west of the site. The property is listed on the California Integrated Water Quality System (CIWQS) for a storm water construction permit. The permit was issued in 1998 and terminated in 2001. No issues or violations were listed associated with this listed orphan property.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

According to a historical Preliminary Endangerment Assessment prepared by Woodward-Clyde, the site is an approximately 5.12-acre portion of an approximately 74-acre concrete pipe manufacturing property which was constructed as early as 1936. Operations related to the pipe manufacturing company conducted at the site included a headquarters office building, a large automotive service garage and gasoline/diesel fuel filling station, and railroad line with loading and unloading activities. US Pipe and Foundry operated at the site from the 1940s through the 1990s. US Pipe and Foundry (later owned by The Koll Company) operated from the 1940s through 1992 when the two former buildings at the site were demolished to make room for the present-day two-story office building. Between 1992 and 2003, Hughes Markets Incorporated occupied the office building and utilized it as a headquarters building with a sign/print shop located on the first floor. Mellon Financial (later BNY Mellon) has occupied the site since 2003.

A summary of Ramboll's key observations from the available historical sources is presented in Table 5.

Table 5: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
Aerial Photographs (1928, 1938, 1948, 1952, 1964, 1977, 1979, 1981, 1983, 1990, 1994, 2002, 2005, 2009, 2012, 2016) Satellite Imagery [1] (1994-2021)	The site appears as largely undeveloped (and later graded) land in the 1928 and 1938 photographs. In 1948, two long rectangular buildings appear in the central and southern portions of the site with associated vehicles and storage containers. The buildings remain relatively unchanged from the 1940s through the early 1990s. Staining is observed along the western portion of the garage area in the 1960s and 1970s. The 1977 photograph depicts two long rectangular-shaped storage containers located along the northern border of the site; soil staining is visible to both the west and east of the central building (former garage area). The 1981 photograph depicts multiple areas of exterior product storage (likely concrete pipe) along the central and western portions of the site. The 1994 photograph depicts the building in present day configuration with a square-shaped building in the central portion of the site surrounded by surface parking lots.
Topographic Maps (1894 to 2012)	The 1896 through 1925 topographic maps depict the site as vacant undeveloped land. The 1939 map depicts a small building on the eastern portion of the site, and to partially include a larger building located to the northeast of the site. The 1953 through 1981 maps depict two rectangular buildings at the site; one in the northern and central portion of the site and one along the southern border of the site. A railroad spur appears to run along the southern portion of the site. No development is depicted in the 2012 map; however, the site is located in an urban developed area.

Table 5: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
City Directory Abstracts (1964, 1970, 1994, 1995, 1999, 2000, 2001, 2004, 2009, 2015)	The occupants of 14041 Live Oak Avenue are listed as United States Pipe & Foundry/United Concrete Pipe Corporation from at least 1975 through 1994. The occupants at 14005 Live Oak Avenue are listed as Hughes Markets Inc. Corporation (1994-2003), and Mellon Financial (2009).
Assessor Portal	The Assessor portal records indicate that the site was improved with one 56,289 square foot, two-story commercial office building which was constructed in 1992. The site was formerly part of a larger site, parcel number 8535-001-021, and was split into two parcels in 2000.
Preliminary Title Report	According to the Preliminary Title Report, no environmental liens or AULs were identified for the site.

Notes:

[1] In addition to aerial photographs provided by EDR, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

EDR reported that Sanborn fire insurance map coverage is not available for the site.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site appear to have been undeveloped land in the early 1920s and 1930s. By the 1940s, the site appears to be part of a larger property to the north and east which is occupied by concrete pipe manufacturing facilities. Manufacturing activities on the larger property appear to be conducted from the 1940s through the 1980s. By the early 1990s, the manufacturing buildings were demolished, and manufacturing activities ceased. The property to the east of the site appears vacant graded land, the property to the northeast appears converted into a paved surface parking lot, the property to the north across Rivergrade Road appears converted into warehousing, while the property to the west across Stewart Avenue appears to be graded land. By the early 2000s, the vicinity appears similar to present day configuration. Environmental concerns associated with the adjacent properties to the north and east are further discussed in Section 6.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the current and former site addresses. An overview of the findings of this review is presented in Table 6

Table 6: Local and State Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
Los Angeles County Assessor Portal	The Assessor portal records indicated that AIN 8532-001-033 was improved with an approximately 56,298 square foot "commercial two-story office" building in 1992. The previous AIN for the site was 8535-001-021 which was split in May 2000 to create a second parcel with a separate AIN, 8532-001-033.
City of Irwindale Building Department (Building Department)	Building Department files included the following: 14041 Live Oak[5] Avenue 1933-permit to erect a steel aggregate bin 1936-permit to erect a manufacturing pipe building 1940-permit to construct a new concrete pipe manufacturing building 1943-permit for a new tool storage house used with fleet mechanics 1944-construction of an "acetylene generator house" 1945-permit to construct a new building for "bending, threading and cutting small pipe" and to construct a Motor Repair Shop 1953-add a wing to the existing concrete manufacturing building 1957-sewer-sewage disposal permit for a septic tank, seepage pit or pits and/or other drain field (domestic use only), and a building permit to construct an office building, a "cage machine building", a steel frame for a concrete mixer, and a six ton monorail for moving concrete pipe 1958-permit to construct a "craneway cover" 1962-permit for transformer storage and a batch plant 1964-permit to construct a boiler house 1967-permit for a vertical pipe coating machine, another boiler house, and a new batch plant 1968-permit to construct a new "switch gear building", a building for "steam curing boxes", and multiple overhead craneway's 1992-permit issued to Koll Co. to demolish all onsite buildings 14005 Live Oak Avenue: 1992-building permit to construct a new building for Hughes Markets, in addition to a Certificate of Occupancy for Hughes Markets. 2000-building permit to demolish interior portions of the building for The Realty Associated Fund V 2002-building permit for tenant improvements for Mellon Financial Corporation 2004-tenant improvement permits 2013-permit to install an emergency generator issued to Hughes Markets Inc. to be used by Bank of New York Mellon

[5] As noted elsewhere in this report, the historical address of 14041 Live Oak Avenue was used for a larger manufacturing property of which the site was a small portion with limited manufacturing activities. It is likely the majority of the building permits listed for 14041 Live Oak Avenue are for off-site activities and not the site.

Table 6: Local and State Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
Los Angeles County Fire Department – Health Hazardous Material Division (Fire Department – Haz Mat Division)	Ramboll requested records from the Fire Department – Haz Mat Division related to the current and former site addresses. On November 29,2021 the Fire Department – Haz Mat Division communicated that it had no records for the address of 14005 Live Oak Avenue. Records regarding the 14041 Live Oak Avenue were not received as of the date of this report.
Los Angeles County Fire Department – Health Hazardous Materials Division (County Fire Department - HHMD)	The County Fire Department – (HMMD) reported having no records for the 14005 Live Oak Avenue address. As of the date of this report, a response has not been received for the historical address at the site of 14041 Live Oak Avenue.
Los Angeles County Department of Public Works (LACDPW)	The LACDPW records for the 14005 Live Oak Avenue address included the following: 1949-Industrial Survey for United Concrete Pipe Corporation (14041 Live Oak Avenue)-noting "*discharge of lime sludge from the manufacture of acetylene gas for use in steel pipe fabrication is washed into a drain or sewer system that empties into a pit, where the liquid seeps into the soil. The pH of the soil is 11 and is being discharged at the rate of 10 gallons per minute*". A corresponding map indicates the pit is off-site to the north of the site across Arrow Highway. 1990s-multiple documents from the Public Works department regarding an on-site clarifier (sample box only) used in silk screen and printing, and an ownership change from Hughes Markets to Ralphs Markets. Three USTs were permitted at the 14005 Live Oak Avenue address (later ascertained to be off-site) 1993-an application for closure for the sample box in the sign shop 1998-Ralphs Grocery Company merged with Hughes Markets and "took control" of the three off-site USTs. 2000-a letter to the County Los Angeles Fire Department indicated the Hughes Family Market was out of business as of March 2000. 2000-closure authorization for removal of the industrial waste facility. 2001: a Hazardous Materials inspection document stated that the building was gutted and remodeled and the former clarifier (sample box) was removed. 2003: the larger property split into two properties, with the site retaining the 14005 Live Oak Avenue address, while the larger property to the north was issued a new address, 5305 Rivergrade Road.
Department of Toxic Substances Control (DTSC)	The DTSC records for the 14041 East Live Oak Avenue address included the following: 1989 – A Preliminary Endangerment Assessment (PEA) checklist used by DTSC to prepare the documents described previously. 1990 – A preliminary draft of DTSC's letter with PEA Review Comments to Allstair Callender of Woodward-Clyde Consultants, as well as a completed PEA for the larger property including the site.

4.4 Previous Environmental Assessments and Activities

Based on a review of agency records, prior soil sampling and remediation activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.[6]

- **1989 Terra Tech Waste UST and Sump Closure Activities.** In March 1989, Terra Tech was contracted by Rudy's Service Station Repair and Maintenance Inc. (a division of United Concrete Pipe Corporation) to remove a 3,000-gallon waste oil UST and associated 500-gallon sump (with a corresponding motor oil above ground storage tank [AST]) under the oversight of the LACDPW, Waste Management Division. The tank and sump were removed from the site in March 1989. Soil samples collected beneath the north and south ends of the 3,000-gallon tank hold at approximately 10 feet bgs were analyzed for hydrocarbons via USEPA Method 418.1 and USEPA Method 8020 for volatile aromatics. Detections of TRPH ranged from 33 to 4,780 mg/kg. One sample indicated low concentrations of toluene (0.58 mg/kg). According to the LACDPW, the reported "acceptable level" of petroleum hydrocarbons to be left in soil was 100 mg/kg. Soil excavation activities were conducted in April 1989. An additional eight samples were collected beneath the 3,000-gallon tank between 14 and 16 feet bgs following excavation activities. Confirmation sampling indicated TRPH in soils ranged from less than 1 mg/kg to 93.8 mg/kg. The confirmation samples were not analyzed for aromatics due to the no-to-low detections in the more contaminated samples collected prior to soil excavation activities. Because the post-excavation (deeper floor and wall) samples indicated TRPH concentrations less than the LACDPW accepted action level of 100 mg/kg, no further sampling or analyses were performed. Approximately 152 tons of TRPH impacted soil were removed and disposed of off-site.

  On October 18, 1990, Woodward-Clyde Consultants issued a letter stating that the 500-gallon sump was located directly above the 3,000-gallon tank, and that the releasing agent received from the tanks was "Form oil C-572," a mineral oil. Woodward-Clyde Consultants noted that mineral oil had negligible water solubility and no potential carcinogenic properties. Woodward-Clyde also stated that no health or cleanup standards were established for mineral oil. Based on the characteristics of mineral oil, Woodward-Clyde requested closure based on this information. A final closure report detailing the results of the soil additional sampling in the areas southeast of the former 500-gallon concrete sump and 3,000 gallon UST was submitted to LARWQCB on October 29, 1991 and closure for the entire site was issued by the LARWQCB on February 25, 1991.

- **Woodward-Clyde 1990 Preliminary Endangerment Assessment (PEA).** Between 1988 and 1989, The Koll Company (at the time owner of the larger 74-acre property, including the site) contracted with Woodward-Clyde Consultants (Woodward-Clyde) to conduct site assessments of an approximately 74-acre property (approximately 5.12-acres of which comprises the site) including sampling and analysis of soil and groundwater in identified areas of concern. In June 1990, following completion of the subsurface investigation work described above, a PEA was prepared for the site by Woodward-Clyde in anticipation of developing an approximately 55-acre portion of the larger property (including the site) into a commercial park with office and light industrial buildings. The remaining portion of the larger property was purchased by the City of Irwindale for retail development. According to the PEA, a garage, a vehicle fueling area, a portion of the office building, a septic tank (cesspool), and a portion of a railroad tie were located on the

[6] Historical records for the site include a 2,000-gallon waste oil UST listed at the site, however, additional review of records regarding the waste oil tank determined that the waste oil UST was located off-site along Arrow Highway.

site prior to its re-development in the early 1990s. The vehicle fueling area (located in the central portion of the site) contained two 10,000-gallon USTs, and one 1,000-gallon UST; the garage area (also located in the central portion of the site) contained a 3,000-gallon waste oil sump with a 500-gallon waste oil holding tank, and a former septic tank (cesspool); and an engine steam cleaning area located west of the garage area included several 55-gallon drums of hydraulic oil and thinner with possible solvent use. The portion of a former office building (located on the southern portion of the site) had an electrical transformer in a basement crawlspace, possibly containing oils with PCBs. A portion of the railroad area (located on the northern portion of the site) had surface staining associated with rail crane maintenance. Additionally, surface spills occurred at several locations during the plant's operations. Closure of the three USTs, the waste sump, and the 3,000-gallon waste oil UST by the LACDPW is described in the bullets below.

During the 1988/1989 subsurface investigation, sampling (including soil and cesspool water sampling) was conducted at multiple locations around the larger property, including four locations at the site (one by the waste oil sump/tank, five by the 1,000 and 10,000-gallon USTs, and one within the garage and cesspool area). Groundwater was estimated to be present at approximately 170 feet bgs and was not encountered during the subsurface sampling. Areas of concern noted by Woodward-Clyde are below.

Garage area - The suspected steam cleaning and solvent use area (located along the western edge of the garage area of the site) was trenched and excavated, but no evidence of the presence of solvents, such as odor or elevated OVA readings was observed in soil samples collected from the trenches. Subsequent soil sampling conducted in the garage area in December 1988 indicated no VOCs were detected via USEPA Method 8240 in the single sample collected in this area, Sample G-1, which was sampled on December 29, 1988. The California Regional Water Quality Control Board issued a letter to The Koll Company dated February 8, 1991, that stated that area G (near the garage) "was not adequately assessed to determine if soils and potentially groundwater have been contaminated with VOCs." The letter stated that although one grab soil sample was collected at a depth of one foot and analyzed by EPA Method 8240 and did not identify VOCs, "it does not constitute adequate assessment of the area." No additional analysis was conducted on the sample since solvent use was listed as the concern with the garage area. In the letter, the LARWQCB recommended that a quantitative active soil gas survey be conducted to assess soils in the area. No additional documentation was made available to Ramboll confirming additional sampling events subsequently were performed in this area. However, Ramboll conducted additional subsurface investigation in this area (SB/SV-6) as discussed further in Section 6.

Cesspool - One aqueous sample was collected from the cesspools/septic tank and analyzed for solvents via USEPA Method 8240 or USEPA Method 601/602, and via USEPA Method 200.7 for CAM metals. Woodward-Clyde concluded that the sampling results indicated the septic tank likely received sanitary water and not solvent or waste streams from the manufacturing process. Samples collected around the former cesspool/septic tank (CES2) indicated low concentrations of ethylbenzene (3 micrograms per liter [µg/L]) when sampled via USEPA Method 8010 for volatile organic compounds, benzene, toluene, ethylbenzene, and xylenes (BTEX) and CAM metals.

Fueling UST Area - Three former USTs mentioned above (ranging in capacity from 1,000 to 10,000-gallons) stored gasoline and diesel fuel. The fueling tanks and "affected soil" were removed from the site with closure permits from the LACDPW between October 1987 and March 1989. Five soil samples were collected from the excavation in December 1986 and analyzed for petroleum hydrocarbons using USEPA Method 8015. Total fuel concentrations ranged from less

than 10 mg/kg to 560 mg/kg. The LACDPW issued a letter on February 10, 1987 stating the soils were not suitable as fill material and must be manifested and transported to a hazardous waste disposal facility. The contaminated soil was removed for offsite disposal. According to a letter dated February 19, 1987, issued by Brown and Caldwell, two soil samples were collected on February 11, 1987, using a clam bucket digger to collect soil at an approximate depth of three feet below the previous samples (report dated January 19, 1987), as requested by the Los Angeles Fire Prevention Division. Two soil samples were collected from the 1,000-gallon tank excavation area, one from the east end and one from the west end. Each sample was analyzed for petroleum hydrocarbons using USEPA Method 8015. Total fuel hydrocarbon concentrations in the two samples were non detect at the laboratory method detection limit of 5 mg/kg. On March 30, 1987, closure was granted, and a No Further Action (NFA) status letter was issued for the three USTs by the LACDPW. Two additional 10,000-gallon gasoline and diesel tanks remained at the site (which were later removed in 1991 as discussed below).

Sump and Waste Oil Tank Area - Part of the waste sump and tank area was excavated and two samples were collected, at about one foot up from the bottom of the tank at both ends. The samples were analyzed for hydrocarbons via USEPA Method 418.1 and reported detections of 38 and 607 mg/kg above the previously mentioned LACDPW screening level of 100 mg/kg of petroleum in soil. The waste oil sump area was excavated in March 1989 and the sump, tank and approximately 150 tons of "affected soil" were removed and disposed of off-site. No confirmation sampling was noted following excavation activities.

The Los Angeles County Department of Health Services (DHS) issued a letter in response to the 1990 PEA report. The PEA report indicated that the site had been appropriately characterized and sampled. Samples throughout the larger property were analyzed for flammability (EPA Method 1010), pH (EPA Method 8270), volatile organics (EPA Method 8240), semi-volatile organics (EPA Method 8270), and acute aquatic toxicity. The analysis revealed that there were no significant concentrations of hazardous substances. The DHS letter stated that the demolition and development of the site and the larger property (that occurred in the early 1990s) "would adequately mitigate hazards associated with historical activities" (former USTs, and offsite settling ponds and on and off-site cesspools).

- **URS/Dames & Moore 2000-2005 UST Closure Certifications.** As noted previously, the previous site occupant, United Concrete Pipe Manufacturing, operated approximately five diesel fuel and gasoline USTs at the site associated with historical fueling operations. The tanks ranged from 1,000-gallons to 10,000-gallons. The three tank removals and subsequent closure were discussed previously.

  Two additional 10,000-gallon USTs, one diesel fuel and one gasoline, were removed in 1991 at the current office building location by URS (formerly known as Woodward-Clyde) for Mission -Koll in anticipation of future construction activities. Soil samples were collected to evaluate whether the soil under the tanks had been impacted by petroleum hydrocarbons. Soil samples were collected beneath the tanks at a depth of approximately 15 feet bgs. Soil samples beneath the gasoline tank were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by USEPA Method 8015 Modified and soil samples collected beneath the diesel fuel tank were analyzed for TRPH by EPA Method 418.1. Analytical results indicated non-detect concentrations of TPHg beneath the gasoline tank and one sample beneath the north end of the diesel tank contained 186 mg/kg of TRPH, above the previously mentioned LACDPW screening level of 100 mg/kg of petroleum in soil. Additional samples subsequently were collected beneath the diesel fuel tank to assess the

magnitude and extent of the TRPH. Samples were collected at a greater depth (20 and 25 feet) and were non-detect for TRPH but indicated low concentrations of toluene, xylenes, and ethylbenzene. On May 4, 1991, four additional samples were collected near the area where the original TRPH was detected. All samples were non-detect except for one sample that contained 2 micrograms per kilogram (µg/kg) of toluene, below USEPA screening levels. The soil was removed and stockpiled onsite and later moved to another location off-site in case further treatment was deemed necessary. The stockpiled soil was reported to show "no sign of discoloration." The stockpile was reportedly removed from the site and disposed of property as hazardous waste. A closure report was submitted to the LACDPW in 1991, however, the LACDPW requested additional sampling (including sampling and testing for MTBE).

In 2000, a soil boring investigation was completed by URS Corporation (URS) with the goal of obtaining closure status for the two 10,000-gallon USTs removed in 1991. In July 2000, URS personnel met with the LACDPW to discuss specific steps necessary to close the former USTs. In accordance with the LACDPW guidelines, further soil investigation including sampling for MTBE was required before closure would be granted. The LACDPW indicated that five soil borings around the former UST cluster should be drilled at depths of 40 feet bgs (25 feet below the base of the UST inverts) to assess the condition of the subsurface soil. In August 2000, five soil samples were collected from borings at 8, 16, 24, 32, and 40 feet bgs and analyzed for TPH by EPA Method 8015-Modified for carbon chain C44 and BTEX/MTBE by EPA Method 8020. Soil samples collected as feasibly close to 32 and 40 feet were additionally analyzed for lead by EPA Method 6010B. Results of the field monitoring indicated the presence of some residual hydrocarbons in vapor-phase as measured by the photo ionization detector (PID). Results of the laboratory analysis during the 2000 investigation "showed no indication of petroleum hydrocarbons remaining in the soil, and lead concentrations were indicative of background levels in soil for the area." The LACDPW issued closure certification on September 14, 2005 for the former USTs.

4.5 Interviews

Ramboll conducted an onsite interview with the Facility Manager with BNY Mellon with regards to the operations and environmental history; Ramboll incorporated the responses into the applicable sections of this report.

4.6 User-Provided Information

Ramboll provided Rexford with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. In returning the questionnaire, the User did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on December 6, 2021. During the site visit, observations of both the interior of the building and exterior portions of the site were made to evaluate if any RECs, as defined in Section 7, are present. Ramboll did not observe the roof of the building.

5.2 General Site Setting and Observations

Ramboll made observations concerning the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the site	See Section 3.2
9.4.2.2	Past use(s) of the site	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the site in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	 **Formerly Present** (See Section 5.2.2) **Present** (see Section 5.2.3)
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Formerly Present** (see Section 4.4)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) **Present** Unlikely **Present** Unlikely
Interior Issues		
9.4.3.1	Heating/cooling systems	Present (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Absent
9.4.3.3	Floor drains and interior sumps	See Section 3.2.3
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.5)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	See Section 3.2.3
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	**Formerly Present** (see Table 1)
Non-Scope Considerations		
N/A	Asbestos Containing Materials	(see Section 5.2.6)
N/A	Lead-Based Paint	(see Section 5.2.7)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Water Intrusion/Mold	(see Section 5.2.8)
N/A	Radon	(see Section 5.2.9)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include diesel fuel for the two emergency generators and hydraulic oils utilized in the two hydraulic elevators.

Chemical storage at the site is limited to janitorial supplies (stored in the janitorial closets). Wastes are collected in dumpsters which are positioned on pavement in the northeast corner of the parking lot. No visual evidence of significant release was observed in these areas. Chemicals are not stored in exterior areas of the site.

5.2.2 Underground Storage Tanks

Seven USTs were formerly located at the site and were removed between 1987 and 1991. Pertinent information regarding these USTs is provided in Table 8. Information related to the closure activities is provided in Section 4.4. The site is listed on the Leaking Underground Storage Tank (LUST) database. Further information regarding these closure activities is included in Section 4.4.

Table 8: Underground Storage Tanks

Number and Size (gal.)	Contents	Location	Key Dates	Regulatory Closure Granted?	Notes
Decommissioned/Closed-in-Place/Removed					
1x10,000	Diesel fuel	West of garage building	Installed in the 1940s; Removed December 1986	Closure issued on March 30,1987 by the LACDPW	Tank #5: carbon steel single walled tank, closed.

Table 8: Underground Storage Tanks

Number and Size (gal.)	Contents	Location	Key Dates	Regulatory Closure Granted?	Notes
1 x 10,000	Gasoline	West of garage building	Installed in the 1940s; Removed December 1986	Closure issued on March 30,1987 by the LACDPW	Tank #6: carbon steel single walled tank, closed.
1 x 1,000	Gasoline	West of garage building	Unknown installation date; Removed December 1986	Closure issued on March 30,1987 by the LACDPW	Tank #7: carbon steel single walled tank, closed.
1 x 500	Waste Oil	Southeast corner of former garage building	Installed in 1948; Removed March 1989	Closure certification letter issued on February 25, 1991 by the LACDPW	Tank #8 (sump): removed from site, drained oil sump, closed.
1 x 3,000	Waste Oil	Southeast corner of former garage building	Installed in 1974; Removed March 1989	Closure certification letter issued on February 25, 1991 by the LACDPW	Tank #8: steel tank, closed.
1 x 10,000	Diesel fuel	Southwest of the garage	Installed in 1986; Removed on April 23, 1991	Closure Certification Letter issued on September 14, 2005	Tank #9: Double walled, , closed.
1 x 10,000	Unleaded Gasoline	Southwest of the garage	Installed in 1979; Removed on April 23, 1991	Closure Certification Letter issued on September 14, 2005	Tank #4: carbon steel single walled tanks, closed.

In addition, during Hughes Markets' occupancy (1990s), a clarifier (sample box only) was installed on the first floor of the office building. The clarifier was utilized in association with Hughes Market's sign and printing production office. A silver recovery unit was installed in connection with the clarifier. The silvery recovery system recovered silver from photo-processing waste, reducing the amount of metals in the effluent water according to EPA pollution prevention requirements for silver-bearing wastes.

LACDPW records indicated the building was "gutted and renovated extensively" prior to BNY Mellon's occupancy of the site between October 2000 and February 2001. The clarifier (sample box) was filled and the floor resurfaced. No environmental concerns or violations were reported by the LACDPW in connection with the former clarifier and no sampling was required. In December 2002, the site received closure from the LACDPW for the sampling box used in connection with the photography shop for Former Hughes Markets Corporate Headquarters located at 14005 Live Oak Avenue. The sample box was removed and "nothing was visible in the area shown in the closure diagram." Facility personnel was unaware of additional information regarding the clarifier.

5.2.3 Aboveground Storage Tanks

Although not typically identified as an AST, two hydraulic elevator systems with corresponding hydraulic reservoirs are located at the site. The elevators contain hydraulic reservoirs that appear to be less than 55 gallons in size. Facility personnel knew of no leaks or spills relating to the ASTs, and Ramboll saw no visual indication of leaks or releases from the hydraulic reservoirs during the site visit.

Historically, a motor oil AST (unknown size or installation date) was formerly associated with the sump pump tank along the southeast corner of the former garage building.

5.2.4 Polychlorinated Biphenyls

During the site visit, Ramboll observed one pad-mounted transformer immediately north of the building. The unit was not labeled as to its PCB content. Because the unit was likely installed at the time of the site development in 1992, after the 1979 federal ban on the manufacture of PCBs, it is unlikely that the unit contains PCBs. As noted above, two hydraulic elevators are located in the northern portion of the site. Given that the hydraulic oil for the elevators is expected to have been routinely replaced by the elevator service company, it is unlikely that the hydraulic oil contains PCBs. No visual evidence of significant staining or releases was observed near the hydraulic oil reservoirs.

Because the building was constructed after the 1979 federal ban on the manufacture of PCBs, it is unlikely that hydraulic oils in the elevators or other types of electrical equipment, such as capacitors or light ballasts, contain PCBs.

5.2.5 Stains or Corrosion on Interior Floors, Walls, Ceilings, Soil or Pavement

Ramboll observed visual evidence of minor pavement staining in the parking lot areas; facility personnel stated the staining likely resulted from minor drips from employee vehicles parked in these areas. Pavement in the vicinity of the observed staining appeared to be in good condition, with no visual evidence of major cracking.

5.2.6 Asbestos-Containing Materials

An asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work. However, Ramboll made limited visual observations[7] of representative building materials in those areas accessed during the site tour to identify readily apparent presumed asbestos-containing materials (PACMs) and suspect ACMs. The Occupational Safety and Health Administration's (OSHA's) definition of PACMs is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the

[7] Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACMs and suspect ACMs.

past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

The building at the site was not constructed prior to 1981; thus, none of the building materials at the site are considered PACM. Asbestos has continued to be used in some building materials since that time, although it was phased out of use in many building materials during the early 1980s, thus it is unlikely that ACM remains in building materials. Facility personnel knew of no ACMs within the building and a comprehensive asbestos survey has not been conducted. However according to the EDR database, 1X United Concrete Pipe Corp transported 5.125 tons of asbestos containing waste from the site in 1989, prior to the construction of the present-day office building. Ramboll was not provided with addition information regarding historical asbestos removal activities at the site.

There are no regulatory requirements to remove PACMs, suspect ACMs, and known ACMs or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll did not observe any obviously damaged building materials.

5.2.7 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction dates of the building in 1992, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition.

5.2.8 Water Intrusion/Mold

Ramboll did not perform a mold survey at the site; however, no visual indication of recent flooding was identified and Ramboll noted that the site is located outside of a 100-year flood zone. According to facility personnel, the facility has not historically experienced problems with water intrusion and Ramboll did not observe the presence of obvious mold conditions or severe water damage during the site visit in the areas assessed.

5.2.9 Radon

Based on information included in the EDR database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, none of the five properties in the same zip code as the site surveyed reported radon levels which exceeded 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon levels of a first-floor room and a basement at 63 properties were 0.711 pCi/L and 0.933 pCi/L, respectively. Based on the low levels of radon at properties within the vicinity of the site, it is unlikely that Radon is a concern at the site.

6. SUBSURFACE INVESTIGATION

6.1 Scope of Work

Ramboll conducted a limited subsurface investigation at the site that included collection of soil and soil vapor samples (see Figure 3). The scope for the subsurface investigation focused on specific areas of concern identified through the course of conducting the Phase I ESA. The following environmental features and/or concerns were identified that required investigation (summarized in Table 9 below):

Table 9: Sampling Rationale

Boring ID	Sample Intervals (ft bgs)	Maximum Depth (ft bgs)	Analysis	Sampling Rationale/ Targeted Features
SB/SV-1	Soil: 2, 5	15	TPH, metals	SV-1 was advanced in order to evaluate potential environmental impacts along the northern property line in connection with historical uses in this portion of the site and adjoining property.
	Soil Vapor: 5,15		VOCs	
SV-2	Soil Vapor: 5	5	VOCs	SV-2 was advanced in order to evaluate potential environmental impacts along the northern property line in connection with historical uses in this portion of the site and adjoining property.
SB/SV-3 and SB/SV-6	Soil: 5, 10	15	TPH, metals	Based on Ramboll's review of historical aerial photographs, SB/SV-3 and SB/SV-6 were located in an area of heavy staining visible (Figure 2) in historical aerial photographs and areas where significant operations are visible in the photographs.
	Soil Vapor: 5 and 15		VOCs	
SB/SV-4, SB/SV-7, SB/SV-8	Soil: 5,10	15	TPH, metals	SB/SV-4, SB/SV-7 and SB/SV-8 were advanced within the former auto repair garage, where historical hazardous materials usage was likely, such as the use of parts cleaners, oil change operations, and general vehicle maintenance. Potential for deep soil impacts from possible hydraulic lifts/maintenance pits was also be evaluated.
	Soil Vapor: 5,15		VOCs	
SV-5	Soil vapor	5	VOCs	Based on Ramboll's review of historical aerial photographs (Figure 3), SV-5 was located in an area to the east of the garage where historical storage and unknown operations occurred in connection with the service garage.
SB/SV-9	Soil: 5,10	15	VOCs, TPH, metals	SB/SV-9 was advanced within the former waste oil tank and oil sump area, where prior investigations did not test for VOCs and metals.
SB/SV-9	Soil Vapor: 5,15	15	VOCs	SB/SV-9 were advanced within the former waste oil tank and oil sump area, where prior investigations did not test for VOCs and metals.

Table 9: Sampling Rationale

Boring ID	Sample Intervals (ft bgs)	Maximum Depth (ft bgs)	Analysis	Sampling Rationale/ Targeted Features
SB/SV-10	Soil: 5,10	15	TPH, metals	SB/SV-10 were advanced to the south of the garage building where historical features resembling underground fuel tanks and other auto repair related activities are visible in historical aerial photographs.
	Soil Vapor: 5,15		VOCs	
SV-11	Soil vapor	5	VOCs	Based on Ramboll's review of historical aerial photographs (Figure 3), SV-11 was located in parking area to the south of the former service garage in an area of historical truck parking and apparent surface staining. This vapor sample location was also needed to evaluate potential soil vapor impacts to the south.

Notes:
Metals analyzed by USEPA method 6010B/7471A
TPH – total petroleum hydrocarbons analyzed by USEPA Method 8015B
VOCs – volatile organic compounds analyzed by USEPA Method 8260B

Prior to initiation of sampling activities, Ramboll contacted Underground Service Alert (USA) to mark the locations of all major utilities near the site boundaries. In addition to the services provided by USA, Ramboll contracted with Ground Penetrating Radar Systems, Inc. (GPRS), a private utility locating company, to conduct a geophysical survey in the immediate vicinity of the boring locations to identify subsurface structures or underground obstructions.

Ramboll also prepared a site-specific Health and Safety Plan (HASP). The HASP was designed to minimize exposure of Ramboll field personnel to potentially hazardous materials. All field personnel involved in the project were required to implement the procedures presented in the HASP while conducting the fieldwork.

On January 10 and 11th, 2022, Interphase Environmental, Inc. (Interphase), under the oversight of Ramboll, advanced a total of 11 borings at the site to collect soil and soil vapor samples as further described below. During advancement of each boring, soils were continuously logged in general accordance with the Unified Soil Classification System (USCS) and monitored using an organic vapor meter (OVM) photoionization device (PID) equipped with at 10.6-electron-volt lamp calibrated against an isobutylene standard. All drilling activities were conducted under the direct supervision of a California-registered Professional Geologist.

6.2 Field Observations and Lithology

Soil encountered in the soil/soil vapor borings primarily consisted of medium grain sand with gravel from the surface to 5 feet below ground surface (bgs) and fine grain sand with gravel from 5 feet to 15.5 feet bgs, the maximum depth explored. Boring logs are included as Appendix F.

Soil was screened in the field with a PID by placing an aliquot of soil in a Ziploc® plastic bag and sampling the headspace with the PID. PID readings generally did not exceed background levels at all locations, and recorded readings ranged from 0.0 to 0.6 parts per million by volume (ppmv).

Groundwater was not encountered during Ramboll's investigation.

6.3 Soil Sample Collection and Sampling Results

Soil borings were advanced using a combination of hand augering and direct push drilling technology. Ramboll installed a total of eight borings (SB-1, SB-3, SB-4, and SB-6 through SB-10) at the site as depicted on Figure 3 and samples were collected from select depths in general accordance with the sampling plan in Table 9. At boring location SB-4, the proposed soil sample at 10 feet bgs was not collected due to the driller hitting refusal at approximately 7.5 feet bgs.

A total of 15 soil samples were collected and stored in laboratory provided containers labeled with a unique sample number, time, and date, and placed in an ice filled cooler for transportation under chain-of-custody documentation to Eurofins CalScience in Tustin, California, a California-certified fixed analytical laboratory. Soil samples were selectively analyzed for total petroleum hydrocarbons (TPH), metals, and volatile organic compounds (VOCs).

Soil sample results were compared to applicable USEPA/DTSC commercial/industrial soil screening levels. Results for TPH and metals in soils are presented in Table 10. Laboratory analytical reports are provided in Appendix G. In summary:

- TPH and VOCs were not detected above applicable screening levels.
- Arsenic was the only metal detected in soil at concentrations above screening levels. However, the arsenic concentrations are within the naturally-occurring background range of Southern California soil at the Site.

6.4 Soil Vapor Probe Installation and Sampling Results

Ramboll installed 14 soil vapor probes co-located at the soil borings locations described above and three additional soil vapor probes (SV-2, SV-5, and SV-11) as depicted on Figure 3. Soil vapor probes were installed at a depth of 5 feet bgs at all 11 soil vapor probe locations and at a depth of 15 feet bgs at six locations (SV-3 and SV-6 through SV-10). At soil boring locations SB-1 and SB-4, the proposed soil vapor probes at 15 feet bgs were not installed due to the driller hitting refusal at approximately 5.5 and 7.5 feet bgs, respectively.

Soil vapor probes were installed and sampled in accordance with the "Advisory – Active Soil Gas Investigations", jointly developed by the California EPA (CAL EPA), DTSC, and LARWQCB/SFRWQCB, dated July 2015. The soil vapor samples were collected and analyzed by A&R Laboratories under the supervision of Ramboll. The soil vapor samples were analyzed for VOCs by USEPA Method 8260B. Results are presented in Table 11 and laboratory analytical reports are provided in Appendix G.

The VOC concentrations in soil vapor were compared to the DTSC and USEPA commercial soil vapor screening levels calculated using an attenuation factor (AF) of 0.03 and 0.001. The soil vapor screening levels were derived using the DTSC's Human Health Risk Assessment (HHRA) Note No. 3, (DTSC, June 2020) for commercial air and applying conservative default attenuation factors for soil vapor migrating from subsurface to existing commercial building vapor (Cal/EPA 2011). The agency's guidance regarding attenuations factors is currently evolving and is open to interpretation. Therefore, for the purposes of this screening phase of investigations, both the 0.03 and 0.001 AF has been used to evaluate soil vapor data.

In summary, no VOCs were detected at concentrations exceeding current regulatory thresholds, although benzene exceeded the commercial/industrial screening level in one sample when using the highly conservative proposed AF of .03. A total of six VOCs were reported in soil vapor above

laboratory reporting limits including tetrachloroethene (PCE), benzene, toluene, ethylbenzene, o-xylene, and 1,2,4-trimethylbenzene. Benzene was reported at a concentration of 0.020 J µg/L at location SV-3 at a depth of 5 feet bgs. This is slightly above the commercial soil vapor screening level for benzene of 0.014 µg/L when using an AF of 0.03, but below the commercial soil vapor screening level for benzene of 0.42 µg/L when using an AF of 0.001. Benzene was not reported above the laboratory RL in any other samples. PCE was reported above the laboratory reporting limit in four of the 17 soil vapor samples analyzed. PCE concentrations ranged from 0.030 µg/L to 0.060 µg/L, which are below the commercial soil vapor screening levels using both the 0.03 and 0.001 AF. The other VOCs reported above laboratory RLs were not detected above applicable commercial screening levels.

6.5 Site Investigation Conclusions

Based on the results of the limited soil and soil vapor sampling conducted as part of this subsurface investigation, Ramboll concludes the following:

- TPH and VOCs were not detected in soil above applicable screening criteria;
- Arsenic was the only metal detected in soil at concentrations above screening levels. However, the arsenic concentrations are within the naturally-occurring background range of Southern California soil at the Site; and
- In soil vapor, no VOCs were reported above applicable DTSC/USEPA commercial existing building screening levels using the 0.001 attenuation factor (AF). Benzene was reported in only one sample above applicable DTSC/USEPA commercial existing building using the screening level calculated using the highly conservative 0.03 AF.

Because Ramboll's review of the subsurface investigation did not identify TPH or VOCs above screening criteria and detections of arsenic were within naturally-occurring background range, Ramboll does not recommend additional investigation.

7. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 14005 Live Oak Avenue in Irwindale, California in December 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

7.1 Findings, Opinions, and Conclusions

7.1.1 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site located at 14005 Live Oak Avenue in Irwindale, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.5 of this report. This assessment has revealed no RECs in connection with the site.

7.1.2 Historical RECs (HRECs)

The following HRECs related to potential contamination concerns were identified:

- **1986 and 1989 Removal of USTs and Sump**. As indicated previously, a filling station formerly was located on the site. Filling station operations included the use of three USTs (one 10,000-gallon diesel fuel, one 10,000-gallon gasoline, and one 1,000-gasoline USTs) which were removed from the site in 1986. During the removal of the former fuel tanks, five soil samples were collected from the tank excavation area and each sample was analyzed for petroleum hydrocarbons; detected TPH concentrations in the five samples ranged from less than 10 mg/kg to 560 mg/kg. The LACDPW issued a letter on February 10, 1987 stating the soils were not suitable as fill material and must be manifested and transported to a hazardous waste disposal facility. The contaminated soil was removed for offsite disposal. Additional sampling was performed in 1987 in the area of the previous 1,000-gallon UST, as requested by the Los Angeles Fire Prevention Division because the two soil samples collected in this area during the 1986 sampling event detected TPH concentrations at 560 and 200 mg/kg. Two soil samples were collected from the 1,00-gallon tank excavation area, one from the east end and from the west end. Each sample was analyzed for TPH and TPH was not detected in either sample. On March 30, 1987, closure was granted for the three tanks, and a NFA status letter was issued for the three USTs by the LACDPW.

  In March 1989, two additional USTs (a 3,000-gallon waste oil UST and associated 500-gallon sump (a.k.a. a UST) with a corresponding motor oil AST) that were not associated with the filling station were removed from the site under the oversight of the LACDPW, Waste Management Division. Soil samples collected beneath the north and south ends of the 3,000-gallon tank were analyzed for TRPH and volatile aromatics. Detections of TRPH ranged from 33 to 4,780 mg/kg. One sample indicated low levels of toluene (0.58 mg/kg). According to the LACDPW, the reported acceptable level of petroleum hydrocarbons to be left in soil was 100 mg/kg, and therefore, the TRPH-impacted soil was excavated in April 1989. An additional eight samples were collected beneath the 3,000-gallon tank following excavation activities and indicated TRPH in soils ranged from less than 1 mg/kg to 93.8 mg/kg. Closure was issued by the LACDPW on February 25, 1991.

- **1991 Removal of Underground Storage Tanks (USTs).** As stated above, a filling station formerly was located on the site. Filling station operations included the use of five documented USTs, two of which (one 10,000-gallon diesel fuel and one 10,000-gallon gasoline USTs) were

removed from the site in 1991 and the remaining three of which were removed in 1986 (described under HRECs, Section 6.1.2). With regard to the two USTs removed in 1991, soil samples were collected from beneath the tanks to evaluate if soils had been impacted by the potentially leaking USTs; analytical results indicated non-detect concentrations of total petroleum hydrocarbons as gasoline (TPHg) beneath the gasoline tank and low concentrations of total recoverable petroleum hydrocarbons (TRPH) below the diesel fuel tank. Additional samples subsequently were collected beneath the diesel fuel tank to assess the magnitude and extent of the TRPH impacts; soil samples were non-detect for TRPH but indicated low concentrations of toluene, xylenes, and ethylbenzenes. The impacted soil was removed and stockpiled on-site and later moved to another location off-site in case further treatment was deemed necessary. According to documents reviewed by Ramboll, no soil stockpiles were left at the site. A closure report was submitted to the Los Angeles County Department of Public Works (LACDPW) in 1991, however, the LACDPW subsequently requested additional sampling (including sampling and testing for methyl-tertiary-butyl [MTBE]) prior to granting closure. A 2000 soil boring investigation was completed in the area of the former USTs with the goal of obtaining closure status for the two formerly 10,000-gallon USTs during which five additional soil borings were drilled and sampled for TPH and metals at locations around the former USTs. Results of the laboratory analysis during the 2000 investigation "showed no indication of petroleum hydrocarbons remaining in the soil, and lead concentrations were indicative of background levels in soil for the area." Following the additional investigation, the LACDPW issued closure certification on September 14, 2005 for the two former USTs removed in 1991.

7.1.3 Other Findings

Although not considered to be RECs, Ramboll identified the following notable other findings.

- **Past Industrial Operations at the Site.** Between the late 1940s and the early 1990s, the site, as part of a larger property (US Pipe and Foundry), was used in concrete pipe manufacturing operations. Operations related to the pipe manufacturing company conducted at the site included a headquarters office building, a large automotive service garage (with a waste oil sump and associated tank), and gasoline/diesel fuel filling station (with several underground storage tanks [USTs]), a cesspool (septic tank), and a railroad line with loading and unloading activities. These former industrial operations included or may have included the use of petroleum products, solvents, adhesives, paints, metals, acids, caustics, corrosives, and/or other chemicals, including potential solvent use in the service garage area. Subsurface investigations performed at the focused on the removal and subsequent assessment of former USTs at the site (as described in the ensuing sections of this report), and limited soil sampling was performed in the vicinity of the service garage and cesspool including trenching and surface sampling. Soil samples were tested for solvents, CAM metals and benzene, toluene, ethylbenzene, and xylenes (BTEX). Samples collected around the former cesspool indicated low concentrations of ethylbenzene (3 micrograms per liter [µg/L]), below screening levels. The one soil sample collected around the garage area did not detect volatile organic compounds (VOCs) via USEPA Method 8240. Ramboll requested information from the Los Angeles Regional Water Quality Control Board (LARWQCB) and additional agencies (see Section 2.1) for the current and former site addresses in an attempt to further assess environmental concerns associated with the former industrial operations performed at the site; however, only limited information has been provided to date. To address the largely unknown historical features and nature of historical activities, Ramboll conducted a subsurface investigation at the site that included collection of soil and soil vapor samples in January 2022. Based on the results of the limited soil and soil vapor sampling conducted as part of this subsurface

investigation, Ramboll concluded the following: total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) were not detected in soil above applicable screening criteria; arsenic was the only metal detected in soil at concentrations above screening levels but below established California background levels. In soil vapor, no VOCs were reported above applicable DTSC/USEPA commercial existing building screening levels using the 0.001 attenuation factor (AF). Benzene was reported in only one sample above applicable DTSC/USEPA commercial existing building using the screening level calculated using the highly conservative 0.03 AF. Based on the subsurface investigation conducted by Ramboll (see Section 6 for additional details), it is unlikely the historical operations have impacted the subsurface and no additional sampling is recommended.

- **1991 Removal of Underground Storage Tanks (USTs).** As stated above, a filling station formerly was located on the site. Filling station operations included the use of five documented USTs, two of which (one 10,000-gallon diesel fuel and one 10,000-gallon gasoline USTs) were removed from the site in 1991 and the remaining three of which were removed in 1986 with closure (described under HRECs, Section 6.1.2). With regard to the two USTs removed in 1991, soil samples were collected from beneath the tanks to evaluate if soils had been impacted by the potentially leaking USTs; analytical results indicated non-detect concentrations of total petroleum hydrocarbons as gasoline (TPHg) beneath the gasoline tank and low concentrations of total recoverable petroleum hydrocarbons (TRPH) below the diesel fuel tank. Additional samples subsequently were collected beneath the diesel fuel tank to assess the magnitude and extent of the TRPH impacts; soil samples were non-detect for TRPH but indicated low concentrations of toluene, xylenes, and ethylbenzenes. The impacted soil was removed and stockpiled on-site and later moved to another location off-site in case further treatment was deemed necessary. According to documents reviewed by Ramboll, no soil stockpiles were left at the site. A closure report was submitted to the Los Angeles County Department of Public Works (LACDPW) in 1991, however, the LACDPW subsequently requested additional sampling (including sampling and testing for methyl-tertiary-butyl [MTBE]) prior to granting closure. A 2000 soil boring investigation was completed in the area of the former USTs with the goal of obtaining closure status for the two formerly 10,000-gallon USTs during which five additional soil borings were drilled and sampled for TPH and metals at locations around the former USTs. Results of the laboratory analysis during the 2000 investigation "showed no indication of petroleum hydrocarbons remaining in the soil, and lead concentrations were indicative of background levels in soil for the area." Following the additional investigation, the LACDPW issued closure certification on September 14, 2005 for the two former USTs removed in 1991.
- **San Gabriel Valley (Area 2) Baldwin Park, CA National Priorities List (NPL).** The site is located within the Baldwin Park Operable Unit (BPOU) of the San Gabriel Valley superfund site, which comprises approximately eight square miles of contaminated groundwater. The main contaminants of concern are chlorinated volatile organic compounds (VOCs), namely tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride, perchlorate, n-nitrosodimethylamine, 1,2,3-trichloropropane, and 1,4-dioxane. Since 2006, groundwater plumes have been controlled through the use of groundwater extraction wells, treatment of VOCs with air stripping or liquid phase granular activated carbon (LPGAC), ion exchange, and ultraviolet light and hydrogen peroxide system. Treated groundwater is conveyed to the public water distribution system. The most recent "Five-Year Review" was completed in 2017 and concluded that the superfund site remedy continued to be protective of human health and the environment. Although the site is located within the boundaries of the BPOU, according to the most recent

Annual Performance Evaluation Report conducted by the EPA (dated April 2021) which includes the BPOU, the site is located at least 0.7-mile crossgradient of the identified VOC contaminant plume.

The site is listed in the Well Investigation Program (WIP) database related to the BPOU site investigation. The WIP is a program that was implemented to identify facilities that may have contributed to groundwater impacts associated with San Gabriel Valley Area 2. The status of the WIP listing for the site is listed as "backlog;" however, no subsurface investigations appear to have been conducted at the site with respect to the WIP listing. The WIP program is no longer in use. Existing WIP cases that are still begin assessed or remediated are overseen under the SLIC Program. A listing of "backlog" is not anticipated to cause for concern to the site.

Based on the available information, there is no indication that groundwater contamination associated with the BPOU is migrating to the site. If contamination associated with the BPOU is found to have migrated onto the site, it is expected that any investigation/remedial activities would be the responsibility of the entity(ies) named in the listing or other designated responsible party and not the owner of the Property.

7.1.4 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll did identified the following *de minimis* condition related to the site:

- **Pavement Staining.** Ramboll observed multiple areas of exterior pavement where automotive stains were apparent. The stains were limited in areal extent, the underlying pavement appeared to be intact, and no stains appeared to reach storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

7.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations from the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted interviews with representatives of BNY Mellon with tenure at the site dating back to 2014 and reviewed other historical sources regarding former uses of the site.
- During the site visit, Ramboll did not observe the roof of the building due to the facility personnel's request that only a limited number of visitors view the roof due to security reasons.
- Due to security concerns, the site contact requested photos be limited to storage closets and exterior photos only.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

Notes:

Only compounds reported above the laboratory reporting limit in at least one sample are shown.
Concentrations and screening levels are reported in milligrams per kilogram (mg/kg).
bgs - below ground surface
Concentrations above the laboratory RL are **bolded**.
< X - not reported above laboratory RL (X)
J - analyte concentration detected between RL and method detection limit (MDL)
Soil samples were analyzed for Metals by USEPA Method 6010B/7471A and TPH by USEPA Method 8015B.
RL - reporting limit
GRO - gasoline range organics
ORO - oil range organics
USEPA - United States Environmental Protection Agency
DRO - diesel range organics
Highlights exceed respective screening criteria.
B - compounds was found in the blank and sample
NE - Not established
TPH - total petroleum hydrocarbons

[a] Arsenic occurs naturally in soil. An evaluation of arsenic soil data from school sites in Southern California found arsenic concentrations ranging from 0.15 mg/kg to 20 mg/kg, with an upper-bound background arsenic concentration of 12 mg/kg (Chernoff G., Bosan W., Oudiz D. 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil). Arsenic concentrations in soil samples collected at the site were conservatively screened against 12 mg/kg.

Notes:
Only compounds reported above the laboratory reporting limit in at least one sample are shown.
Concentrations and screening levels are reported in micrograms per Liter (µg/L).
VOCs - volatile organic compounds
AF - attenuation factor
bgs - below ground surface
RL - reporting limit
Concentrations above the laboratory RL are **bolded**.
J - analyte concentration detected between the RL and method detection limit (MDL)
< X - not reported above laboratory RL (X)
Duplicate sample results are italicized.
Highlights exceed respective screening criteria.
Soil gas samples were analyzed for volatile organic compounds (VOCs) by USEPA Method 8260B.
USEPA - United States Environmental Protection Agency

APPENDIX A
SITE PHOTOGRAPHS

Photo 1: View of the site building, municipal waste dumpsters, and diesel fuel generator enclosure looking southwest.

Photo 2: View of the main entrance of the site building looking north.

Photo 3: View of lidded municipal waste dumpster located in the northeastern portion of the site parking lot.

Photo 4: View of the lunch room in the northwest corner of the building.

Photo 5: View of one of two janitorial rooms, sink, and hot water heater located on the first floor.

Photo 6: View of one of two hydraulic elevator equipment and reservoir located on the first floor.

Photo 7: View of the second hydraulic elevator equipment and reservoir located on the first floor.

Photo 8: View of the smaller Cummins Genset emergency generator equipment located in the north

Photo 9: View the Cummings Genset associated diesel fuel "day tank."

Photo 10: View of the larger 2,200-gallon diesel fuel "belly" tank under the Caterpillar emergency generator located in the northeastern corner of the site.

Photo 11: View of minor parking lot staining.

Photo 12: View of the adjacent vacant parcel to the east looking east

Photo 13: View of the semi tractor trailer parking lot to the northeast of the site.

Photo 14: View of vicinity property to the north looking north.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

EDR conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

EDR conducted the search of environmental databases in December 2021. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 8

RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 4 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: CAD980818512

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 05/05/2021 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

Facility Id: 10823				

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 3 CA HAZNET sites within approximately 0.001 miles of the target property.

CA LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the CA LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 02/04/2021 has revealed that there are 4 CA LOS ANGELES CO LF METHANE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not

limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 2) is a ground water plume that parallels the San Gabriel River to the west in the San Gabriel ground water basin in the Baldwin Park area of Los Angeles County, California. The plume is about 7.5 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride, according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies containless than 5 parts per billion ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the threeother San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/22/1990
Comments: PRELIM ASSESS DONE PRELIMINARY ENDAGERMENT ASSESSMENT COMPLETED WITH AN NFA DESIGNATION. THIS SITE WAS GIVEN AN NFA BASED ON LACK OF SIGNIFICANT HAZARDOUS CONSTITUENTS IN THE SOIL. MINERAL OIL WAS THE PRIMARY CONTAMINANT IN THE SOIL WHICH IS NOT CONSI- DERED TO BE HAZARDOUS. THE SITE MANUFACTURED LARGE CONCRETE PIPE- SECTIONS TO BE USED FOR PIPE LINES AND SEWERS.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

UNITED CONCRETE PIPE CORP (Continued) **1000399388**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CHARLIE'S PRODUCE (Continued) **S123500599**

Violation Date:	01-12-2015
Citation:	19 CCR 4.5 2755.1(b) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.1(b)
Violation Description:	Failure to ensure that the process is designed in compliance with recognized and generally accepted good engineering practices.
Violation Notes:	Returned to compliance on 02/11/2015. OBSERVATION: The owner/operator failed to ensure that the process is designed in compliance with recognized and generally accepted good engineering practices. For example, the Sullair compressors had Pressure Relief Valves that were manufactured by Hansen Technologies. These PRV had Cat. No. H5601, and the date codes, 05B-12 and 10B-12, fall within the range that make them subjected to recall by the manufacturer. CUPA CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating you have ensured that the process is designed in compliance with recognized and generally accepted good engineering practices. Replace the H601 Hansen Technologies pressure relief valves at the Sullair compressors in accordance to the instructions of Hansen Technologies.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

WYNNS A DIV OF ILLINOIS TOOL WORKS (Continued) **1014915597**

List of NAICS Codes and Descriptions:
NAICS Code: 324191
NAICS Description: PETROLEUM LUBRICATING OIL AND GREASE MANUFACTURING

Facility Has Received Notices of Violations:
Violations: No Violations Found

Evaluation Action Summary:
Evaluations: No Evaluations Found

HAZNET:
Name: WYNNS A DIV OF ILLINOIS TOOL WORKS
Address: 5238 RIVERGRADE RD
Address 2: Not reported
City,State,Zip: IRWINDALE, CA 917060000
Contact: LORI CATHERASOO EXT 306
Telephone: 6263340231

Year: 2013
Gepaid: CAR000220269
TSD EPA ID: TXD982560294
CA Waste Code: 551 - Laboratory waste chemicals
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.0025

Year: 2013
Gepaid: CAR000220269
TSD EPA ID: CAD008364432
CA Waste Code: 551 - Laboratory waste chemicals
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.0255

Year: 2013
Gepaid: CAR000220269
TSD EPA ID: TXD000838896
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 1

Year: 2013
Gepaid: CAR000220269
TSD EPA ID: CAT080013352
CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 2.964

Year: 2013
Gepaid: CAR000220269
TSD EPA ID: NVD980895338

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002

FORMFACTOR, INC. (Continued) **1000857074**

Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D011
Waste Description: SILVER

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: K018
Waste Description: HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.

Waste Code: P011
Waste Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Waste Code: P121
Waste Description: ZINC CYANIDE (OR) ZINC CYANIDE ZN(CN)2

Violation Date:	09-06-2019
Citation:	22 CCR 15 66262.41 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66262.41
Violation Description:	Failure of a large quantity RCRA generator to prepare the Biennial report (Form 8700), and submit to DTSC by March 1st on even numbered years ; and maintain it onsite for three years.
Violation Notes:	Returned to compliance on 10/04/2019. OBSERVATION: The 2017 Biennial report was not prepared and submitted to DTSC. A generator who ships any hazardous waste offsite to a TSDF within the United States shall prepare and submit a Biennial Report, U.S. EPA Form 8700, to the DTSC by March 1 of each even-numbered year, and shall cover generator activities during the previous calendar year. CORRECTIVE ACTION: Immediately prepare a report for the 2017 calendar year and submit it to the DTSC. Ensure that this report is done in a timely manner.

Site Name:	Advantest America Inc.
Violation Date:	10-19-2016
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 11/18/2016. OBSERVATION: No waste analysis was available for the first (approximately 250-gallon) waste water tank prior to pH balance in the Plant Room. This waste is being disposed of as non-hazardous waste. A generator shall makle a hazardous waste determination and keep a record of any test results, waste analyses, or other determinations made in accordance with hazardous waste regulations for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. CORRECTIVE ACTION: Please conduct a pH test and TTLC on the first waste tank prior to and treatment or removal of sludge. Please send a copy of the waste analysis conducted to the CUPA.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HWLQG
Violation Source:	CERS
Site ID:	3309
Site Name:	Advantest America Inc.
Violation Date:	09-06-2019
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or remanufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or remanufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes:	Returned to compliance on 10/04/2019. OBSERVATION: Several 55 gallon drums were observed in the plant room (HW Storage area) without labels. CORRECTIVE ACTION: Submit photos/documentation to this department demonstrating that the empty containers listed above have been marked with the date they were emptied and are being properly

Violation Date: 10-19-2016
Citation: HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.21
Violation Description: Failure to adequately complete, and maintain for review, all requirements of the source reduction evaluation review and plan (SB-14).
Violation Notes: Returned to compliance on 11/18/2016. OBSERVATION: A source reduction evaluation review and plan for2015 was not prepared. On or before September 1, 1991, and every four years thereafter, each generator shall conduct a source reduction evaluation review and plan pursuant to section 67100.5 and have it available for inspection. CORRECTIVE ACTION: Immediately prepare this report and ensure that this report is done in a timely manner.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Address:	14233 JOANBRIDGE ST
City,State,Zip:	BALDWIN PARK, CA 91706
Site ID:	79880
CERS ID:	10283581
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	79880
Site Name:	VALLEY COUNTY WATER DISTRICT
Violation Date:	11-19-2020
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/08/2020. OBSERVATION: A 100 gallon container of used oil located in the garage was observed without a hazardous waste label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	79880
Site Name:	VALLEY COUNTY WATER DISTRICT
Violation Date:	11-19-2020
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 12/08/2020. OBSERVATION: A) Liquid was observed accumulated in the tertiary underground containment located under the chlorine tanks situated in the west and east chlorine storage rooms. B) Hazardous waste liquid was observed spilled and accumulated in the flammable cabinet located in the north garage area (as shown to Production Superintendent, Eric Velasquez). CORRECTIVE ACTION: Submit photos/documentation to the CUPA demonstrating the spill has been properly removed and managed.

Violation Date:	05-28-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Division: Los Angeles County Department of Public Works
Violation Program: UST
Violation Source: CERS

Site ID: 148336
Site Name: RIVERGRADE SERVICE STATION LP
Violation Date: 07-10-2020
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WMUDS/SWAT:

Edit Date:	Not reported
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Primary Waste:	SLDWST
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported

Solid Waste Assessment Test Program:	Not reported
Threat to Water Quality:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

SIC Code 2:	Not reported
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	SLDWST
Waste Type2:	Not reported
Waste2:	Solid Wastes
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

ALPHA II/IRWINDALE (Continued) **S101481055**

Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 11/30/1995
Comments: DTSC entered into a Voluntary Cleanup Agreement to review a Preliminary Endangerment Assessment addendum document including a revised Human Health Screening Evaluation for the Alpha II Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 02/10/1997
Comments: DTSC has completed the review of the supplemental information for the PEA. Based upon DTSC's review of the provided information, DTSC concurred with the Addendum to the PEA recommendation that no further action is warranted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/30/1993
Comments: On September 30, 1993, DTSC completed review of the PEA. Based on the information provided in the PEA, the Site exhibits elevated levels of PCBs and Cadmium that pose a potential threat to human health and/or the environment. Therefore, DTSC determined that "Further Action" is warranted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/24/1993
Comments: On June 22, 1993, DTSC received a Notice of Intent to initiate a PEA. The Site consists of 11 Parcels of land and approximately 16 acres. The past uses of the Site included automobile wrecking yards, a used car lot, an auto salvage yard, and an auto repair lot. Currently the Site belongs to Irwindale Community Redevelopment Agency. The Site was contaminated with waste oil and lead. RP states that the site was remediated including the removal of site structures and scrap, excavation and removal of soils with concentrations exceeding 1,000 ppm TPH and lead. RP intented to submit a PEA to ensure NFA at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Longitude (West):	117.968547 - 117° 58' 6.77''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	410666.2
UTM Y (Meters):	3774321.0
Elevation:	414 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12015951 BALDWIN PARK, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

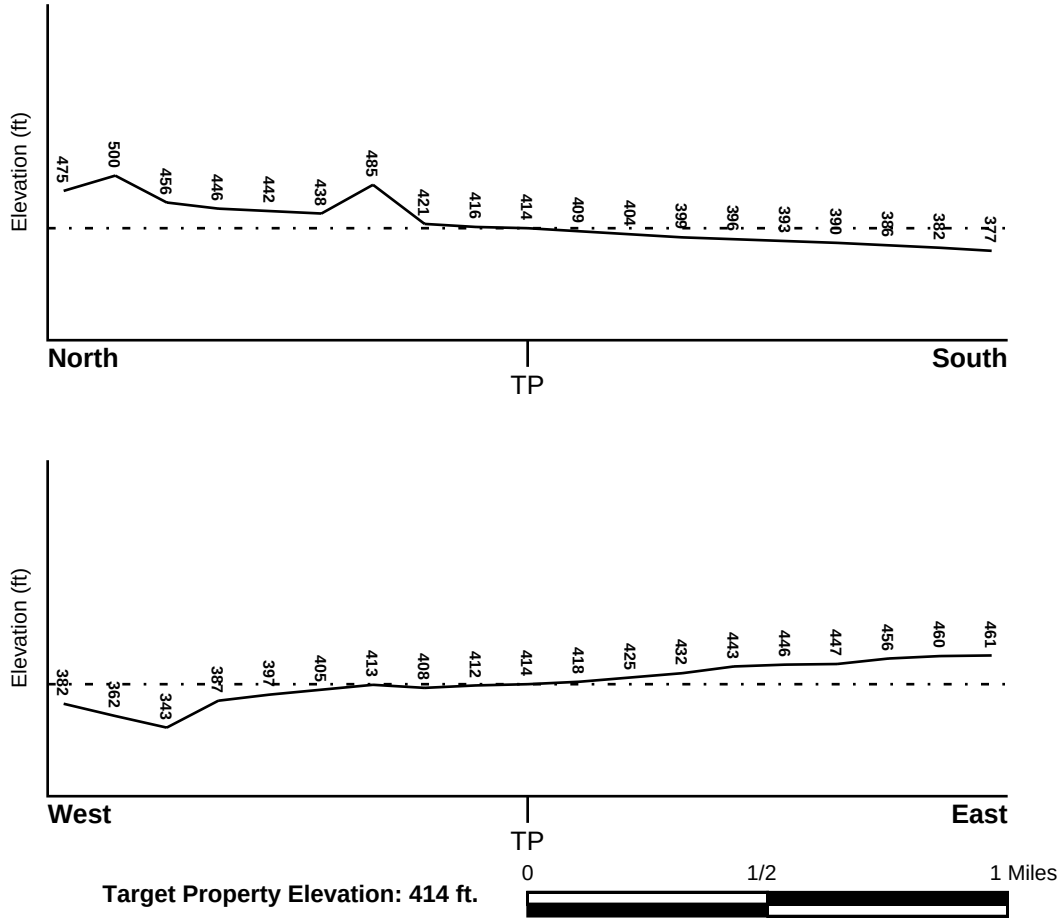
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1700F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BALDWIN PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay

sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Attention: Tattiana Mason

Dear Ms. Mason,

Attached is the Environmental (Hazardous/Toxic Waste) Records Search Summary of 14005 & 14041 Live Oak Avenue ("Irwindale") site located in Irwindale, California. Environmental Support Services ("**ESS**") received the request on November 18, 2021 and December 8, 2021 (See Appendix A). Should you have any questions regarding the summary, please call.

Sincerely,
Environmental Support Services

Shannon Castagno
Project Manager
Shannon@EnvironmentalSupportServices.com

Records Search Summary

Company:	Ramboll US Consulting, Inc.
Project Name:	Irwindale
Attention:	Tattiana Mason
Street Address of Property:	14005 & 14041 Live Oak Avenue Irwindale, CA 91706

Los Angeles County – Public Health Investigator

As of July 1, 2017, all public information requests for Hazardous Materials Business Plans/Inventory, Hazardous Waste Generator License, California Accidental Release Prevention (Cal/ARP) Program information as well as, spills and site remediation information can be requested through the Los Angeles County Fire Department – Health Hazardous Materials Division (see below).

Los Angeles County Fire Department – Health Hazardous Materials Division

Online request: 11-18-21 & 12-6-21, Contact: Custodian of Records

ESS submitted a request for a records search concerning the Irwindale site to the Custodian of Records with the Los Angeles County Fire Department – Health Hazardous Materials Division. **ESS** requested information concerning the utilization, manufacture, storage and/or discharge of hazardous materials/waste, and any information concerning previous or on-going site investigations/remediations pertaining to hazardous materials/waste. They informed **ESS** on November 29, 2021 that their department had no records for 14005 Live Oak Avenue, Irwindale, CA (See Appendix B). As of December 13, 2021, the Custodian of Records had not completed **ESS'** request for 14041 Live Oak Avenue, Irwindale, CA. Should any information concerning the site surface, **ESS** will immediately forward it to Ms. Mason at the Ramboll US Consulting, Inc. office.

Los Angeles County Public Works – Waste Management Division

On-line Review: 11-18-21 & 12-6-21, Contact: Databases available at counter

ESS reviewed the Los Angeles County Public Works – Waste Management Division's database to determine if there were any records of underground storage tanks, industrial waste discharge permits or violations that may have been issued to the following: 14005 & 14041 Live Oak Avenue, Irwindale, CA. **ESS** reviewed the "Hazardous Materials System" and found that 14005 & 14041 Live Oak Avenue, Irwindale, CA were listed (See Appendix C for photocopies obtained).

City of Irwindale Building Department

E-mailed request: 11-18-21 & 12-6-21, Contact: Laura Nieto

ESS requested that Ms. Nieto, with the City of Irwindale Building Department, provide the building records (all building permits and certificates of occupancy) for 14005 & 14041 Live Oak Avenue, Irwindale, CA (See Appendix D). As of December 13, 2021, Ms. Nieto had not completed **ESS'** request. Should any information concerning the site surface, **ESS** will immediately forward it to Ms. Mason at the Ramboll US Consulting, Inc. office. No further information concerning the site was obtained from the building department at the time of the investigation.

Records Search completed by:

Shannon Castagno
Project Manager
Environmental Support Services

The information provided in this report was obtained by a comprehensive examination of public records, public information and public servant communications. The degree of care performed by **ESS** is equivalent to that exercised by environmental companies performing similar records searches.

Date Ordered 11/18/21

In order to help fulfill the "Records Search Portion" of the standard ASTM/ESA requirement, Environmental Support Services (ESS) provides local, state and federal agency interviews, provides a detailed review of all public records, and can even obtain photocopies of all public files from the Fire Dept., Building Dept., Sanitation Dept., County Environmental Health Dept., RWQCB, etc. No other company provides such a detailed description of a given site and vicinity as ESS. The information obtained from the environmental records search will be summarized in a report within 10 working days of date received at the prices indicated below. Add 5 days and $50 (Minimum Agency Coverage) and $100 (Extended Agency Coverage) for Northern California and out of state sites. (RUSH orders are also available.)

Services Provided:

- ◉ Minimum Agency Coverage (Building, Fire, County Environmental Health) [$175]
- ○ Extended Agency Coverage [$350]
- ☐ Furnish Report on CD [add 10% of invoice total*]

Yes please. We need to know everything we can about this former address (former US Pipe Concrete company from 1940's-?)

Thanks.

Hi Stephanie,

I am still waiting on the building department to respond. I have the Los Angeles County Public Works Dept. photocopies and the Los Angeles County Fire Department response. I would have to start from scratch with the former address. Do you want me to submit foia requests for that address as well?

Sincerely,
Shannon Castagno

Hi Shannon,
Any update on this site? There were potentially 7 former USTs at the site.
The site also has a former address, 14041 Live Oak Ave (which the tanks are listed under). Does that mean you need to ask for additional records?

Thanks
Stephanie

Hi Stephanie,

My Thanksgiving was very nice. I hope yours was as well.

I have requested records from the Los Angeles County Public Works Department. We will see when I get the records if there is any mention of that removal.

Have a great day 😊

Sincerely,
Shannon Castagno
Project Manager

Subject: 14005 Live Oak Ave Irwindale

Good morning Shannon,
I hope you had a nice Thanksgiving week. Did your kids come to visit? Travel is still challenging right now.

Can you tell me if you contacted LA County Sanitation and/or LA County DPW for this site? The site had a former waste oil UST that was removed in 1994 and both departments were cc'd on the closure reports. GeoTracker doesn't have anything other than the closure letter.

Thanks.

RE: PRA of November 18, 2021, Reference # H044085-111821.

Dear Shannon Castagno,

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: 14005 LIVE OAK AVE
IRWINDALE CA 91706

The search revealed that no records were found for the above noted address.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

For businesses in Burbank, CulverCity, Downey, City of LA, La Habra, Monrovia, Pasadena, Santa Monica, Torrance& Underground Storage Tanks in Los Angeles County jurisdiction click here.

If you have any questions regarding your request, please contact our office at (626) 430-3260.

RE: HUGHES WAREHOUSE & DISTRIBUTION CENTER

Dear Mr. Payne:

Per our telephone conversation on July 13, 1999, I am submitting a written request to keep current and active, until further notice, the permits for the following locations:

- Receptor at 14005 Live Oak
- Clarifiers at 5305 Rivergrade Road

The above facility was previously occupied by Hughes Family Markets. Hughes was later involved in a merger which led to Ralphs' acquisition of the warehouse.

Please note that all future correspondence regarding the above facility should be directed to me at Ralphs Grocery Company, Department of Environmental Affairs, 2201 South Wilmington Avenue Compton, California 90220.

If you have any further questions, please do not hesitate to contact me at (310) 884-4288. Thank you for your courtesy and attention to this matter.

Sincerely,

Carrol Chen

LOCATION CODE - *OPTIONAL*	CENSUS TRACT # - *OPTIONAL*	SUPVISOR - DISTRICT CODE - *OPTIONAL*
3S		

THIS FORM MUST BE ACCOMPANIED BY AT LEAST (1) OR MORE PERMIT APPLICATION - FORM B, UNLESS THIS IS A CHANGE OF SITE INFORMATION ONLY.

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

1. [illegible] Must be completed for all **NEW PERMITS, PERMIT CHANGES** or new FACILITY/SITE [illegible] CHANGES.
2. SUBMIT **ONLY ONE (1) FORM "A"** for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the **PERMIT APPLICANT** or the **LOCAL AGENCY UNDERGROUND TANK INSPECTOR.**
4. Please type or print clearly all requested information.
   If using a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

Mark an "X" in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including: city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and name of the operator.
2. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.)
4. Check the appropriate box for **TYPE OF BUSINESS.**
5. If Facility/Site is located within an Indian reservation or other Indian trust lands, check the box marked "YES".
6. Indicate the NUMBER of TANKS at this SITE.
7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1; if the same, write **"SAME AS SITE"** across this section. Be sure to check **PROPERTY OWNERSHIP TYPE** box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1; If the same, write **"SAME AS SITE"** across this section. Be sure to check **TANK OWNERSHIP TYPE** box.

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in reporting the $0.006 (6 mills) per gallon fee due on the number of gallons placed in your USTs. The BOE will exclude persons exempt from paying the storage fee so returns will not be sent. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemptions, please call the BOE at 916-323-9555 or write to the BOE at the following address: Board of Equalization, Environmental Fees Unit, P.O. Box 942879, Sacramento, CA 94279-0001.

V. PETROLEUM UST FINANCIAL RESPONSIBILITY (MUST BE COMPLETED)

Identify the method(s) used by the owner and/or operator in meeting the Federal and State financial responsibility requirements. USTs owned by any Federal or State agency are exempt from this requirement.

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Check **ONE BOX** for the address that will be used for **BOTH LEGAL AND BILLING NOTIFICATIONS.**

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number may be assigned by the local agency; however, this number must be numerical and cannot contain any alphabetical. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM 'B' shall be completed for each tank for all **NEW PERMITS**, FOR ALL CHANGES other **TANK INFORMATION CHANGE**.
2. This form should be completed by either the **PERMIT APPLICANT** or the LOCAL AGENCY INSPECTOR.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB3078).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the CAS # (Chemical Abstracts Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are preassigned and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as that on the Form 'A'. The tank number may be assigned by the local agency; however, this number must be numerical and contain exactly six digits. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are preset [illegible] can be obtained by calling the State Board (916)739-3421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A", AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

VI. TANK CLOSURE INFORMATION

1. ESTIMATED DATE LAST USED (MO/DAY/YR) N/A

2. ESTIMATED QUANTITY OF SUBSTANCE REMAINING N/A GALLONS

3. WAS TANK FILLED WITH INERT MATERIAL? YES N/A NO [ ]

THIS FORM HAS BEEN COMPLETED UNDER PENALTY OF PERJURY, AND TO THE BEST OF MY KNOWLEDGE, IS TRUE AND CORRECT

APPLICANT'S NAME (PRINTED & SIGNATURE): BRYAN CANNON

DATE: 10/22/92

LOCAL AGENCY USE ONLY

THE STATE I.D. NUMBER IS COMPOSED OF THE FOUR NUMBERS BELOW

STATE I.D.#	COUNTY #	JURISDICTION #	FACILITY #	TANK #
	19	000	16787	2

PERMIT NUMBER: 43153

PERMIT APPROVED BY/DATE: RVI 11/5/92

PERMIT EXPIRATION DATE:

FORM B (7-91) THIS FORM MUST BE ACCOMPANIED BY A PERMIT APPLICATION - FORM A, UNLESS A CURRENT FORM A HAS BEEN FILED.

FC4003MB-R5

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all NEW PERMITS, [illegible] other TANK INFORMATION CHANGE.
2. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY [illegible] INSPECTOR.
3. Please type or print clearly all requested info: mation.
4. Use a hard point writing instrument, you are making 3 copies

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB/0784).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in [illegible] The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

(F) Facilities claiming an exemption to regulation must complete this section:
❑ There are no underground storage tanks within this facility.
❑ Final interceptor(s) regulated under industrial waste Permit No _____.
❑ Underground containers within this facility are used only for emergency spill containment for above ground storage tanks.
❑ Other (attach a written statement).

(G) Tank owner representative must complete this section (see back of form):

Signature _____ Title V.P. ENGINEERING AND CONSTRUCTION

Printed Name NORB PARSONEAULT Date 2/12/97

file

INSTRUCTIONS:

Hazardous Materials Underground Storage Permit (**HMUSP**)
Application Supplement

Do not use this form for closure or transfer of an existing HMUSP, new construction plan check, to add an unregistered tank to an existing HMUSP, or an additional approval.

(A) Facility name, mailing address, and facility address on new permit applications must correspond with information on Part 1 of the State Form **"A"**, Facility/Site information. Please correct mailing label information if affixed.

(B) This application supplement is to be used for application to operate and maintain existing tanks located within the jurisdiction of the Department of Public Works. Facilities located within the corporate limits of the cities of Burbank, Glendale, Long Beach, Los Angeles, Pasadena, San Fernando, Santa Monica, Torrance, and Vernon should contact the respective local agencies directly for permit information. Permit renewal is authorized only if no ownership change has occurred. Specify the number of tanks at the facility.

(C) Assessor parcel identification is required for new permit applications only.

(D) The applicant is responsible for completing all information requested on State Forms **"A"** and **"B"**. The Department of Public Works Underground Tank inspector will not fill out these forms for you. This application is due by the date indicated. If you are unable to submit your **LDP/TMP** by the due date, a Provisional **HMUSP** will be issued granting up to 90 days to complete your submittal. Evidence of safe storage must be submitted with this application to qualify for a provisional **HMUSP**.

(E) The total fees to accompany this application represent the **HMUSP** application fee, the first annual **HMUSP** maintenance fee plus the State surcharge. Future annual **HMUSP maintenance fees** will be payable upon billing by the Department of Public Works.

(F) Persons that have been notified to file for a **HMUSP** and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in hazardous waste facility permit issued by the California Department of Health Services is not subject to the **HMUSP** requirements. Owners of such facilities must furnish a copy of the State permit for facilities where this exclusion is requested.

Final interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, storm drains, oil field gathering lines, well cellars, above ground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a **HMUSP**. Claims for exemption are subject to verification.

(G) This **HMUSP** application supplement and each State Form **"A"** or **"B"** must be signed by the **Tank Owner** representative as follows:

1) A principal executive officer at the level of vice-president or by an authorized representative. The representative must be responsible for the overall operation of the facility where the tank(s) are located.

2) A general partner proprietor.

3) A principal executive officer, ranking elected official, or authorized representative of a public agency.

4) A responsible business representative for persons filing under section (**F**) only.

Lisa,

The company removed the tank 7-23-03, which is after the deadline of 7-1-03 so the company owes the FY03-04 fees of $774.

You may waive the penalty fees. This file has been transferred to another file. The site address was 14005 Live Oak Ave, Now the site address is 5305 Rivergrade Rd, Permit #38592. The mailing address for the new site is: WOHL Property Group, 30200 Rancho Viejo Rd #C, San Juan Capistrano CA 92675. My understanding is the property is being handled by The Realty Associates Fund(also File name) property is large and has different streets on different sides of the property. Anyway, the other permit is P#6298t is now closed and has a zero balance.

Thanks, Judy

Anna,

We have not received the fees you are talking about. Is there a reason the fees were late?

Judy

Subject: Re: 14005 Live Oak Ave., Irwindale, CA 91706

Hi Judy,

I rec'd rtn mail from facility mentioned above stating new owner since 8/29/00. also prior my notes dtd 7/03 a Mr Tariq Hussein was contacting DPW regarding the closure reports and that facility 14005 Live Oak Ave., Irwindale was not his. Judy could you please verify if tanks are at the above facility and the person liable for 03/04 fees.

Thanks

The purpose of this questionnaire is to verify your underground storage tank (UST) records and mailing address on file with the Department of Public Works (DPW). Return of this questionnaire is mandatory in order to enable DPW to issue compliance stickers for motor vehile fuel (MVF)/petroleum USTS required after January 1, 1999, as defined by CCR, SEC. 2611 and provided by CH&SC, SEC. 25292.3.

HUGHES MARKET INC
14005 E LIVE OAK AVE

IRWINDALE, $ CA 917061323

Mailing address correct: Y/N
Mark any corrections. NOTE: If you are a new owner, an application for transfer is required. New owner: Y/N

UNDERGROUND STORAGE TANK MANDATORY COMPLIANCE QUESTIONNAIRE MUST BE COMPLETED AND RETURNED TO DPW BY OCTOBER 29, 1998.

Facility name: HUGHES MARKET INC Site address: 14005 E LIVE OAK AVE

Contact person: Greg Peterson Telephone (310) 884-4427 ext —
Fax no. (310) 884-2585

There are 3 MVF/petroleum USTS and 0 non-petroleum USTS registered at this site.

A Certificate of Financial Responsibility IS on file for this site.

Our initial review indicates that all MVF/petroleum USTS ARE NOT IN COMPLIANCE (see individual tank information on next page(s).)

All USTS, regardless of contents, must be in compliance with State and Federal regulations by December 22, 1998, or out of service and in the process of closure. Review the information below for each UST at this site and verify how you want your MVF/petroleum UST certificates handled. Make any necessary corrections to the data shown, sign the affidavit below and return all pages (and any missing documentation) to DPW in the enclosed envelope. Items marked with an asterisk (*) require submittal of missing information or documents. Items marked with the symbol (@) require the submittal of a Certificate of Compliance (State Form "C") and supporting documentation. If you plan to upgrade or close a UST after December 22, 1998, you must eliminate the UST from service, remove the contents to a legal point of disposal and file for temporary or permanent closure with DPW no later than December 21, 1998. Owners who abandon, remove or fill USTS without prior authorization from DPW will be prosecuted.

Compliance certification should be sent to: Site address ___ Mailing address ___
We wish to pick up certificates in person X (you will be notified of date and time)

The Undersigned certifies under penalty of perjury that to the best of my belief and knowledge, the information provided is true and correct.

Subject: UST Certification

Date: December 7, 1998

Carl,

Please process this questionnaire and call when certification is ready to pick up. Ralphs Grocery acquired this location through the merger with Hughes Markets. Because of this, I received the questionnaire past the due date. I also wanted to thank you for all your help having the certification issued for our facility in Compton. You probably don't remember, but thank you anyway!

If you have any questions or problems, please give me a call.

Sincerely,

Greg Peterson

THIS FORM MUST BE ACCOMPANIED BY AT LEAST (1) OR MORE PERMIT APPLICATION - FORM B, UNLESS THIS IS A CHANGE OF SITE INFORMATION ONLY.
OWNER MUST FILE THIS FORM WITH THE LOCAL AGENCY IMPLEMENTING THE UNDERGROUND STORAGE TANK REGULATIONS

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

SECTION 2711 OF TITLE 23, CHAPTER 16, CALIFORNIA CODE OF REGULATIONS AND SECTIONS 25286, 25287, AND 25289 OF CHAPTER 6.7, DIVISION 20, CALIFORNIA HEALTH AND SAFETY CODE REQUIRE OWNERS TO APPLY FOR AN UST OPERATING PERMIT.

1. One FORM "A" shall be completed for all NEW PERMIT CHANGES or any FACILITY/SITE INFORMATION CHANGES.
2. SUBMIT ONLY ONE (1) FORM "A" for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.
6. Tank owner must submit a facility plot plan to the local agency as part of the application showing the location of the USTs with respect to buildings and landmarks [Section 2711 (a)(8), CCR].
7. Tank owner must submit documentation showing compliance with state financial responsibility requirements to the local agency as part of the application for petroleum USTs [Section 2711 (a)(11), CCR].

TOP OF FORM: "MARK ONLY ONE ITEM"

Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   ~~P.O. BOX NUMBERS ARE NOT ACCEPTABLE.~~
   Include nearest cross street and name of the operator.
2. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.).
4. Check the appropriate box for TYPE OF BUSINESS.
5. If Facility/Site is located within an Indian reservation or other Indian trust lands, check the box marked "YES".
6. Indicate the NUMBER of TANKS at this SITE.
7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1; If the same, write "SAME AS SITE" across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1; If the same, write "SAME AS SITE" across this section. Be sure to check TANK OWNERS TYPE box.

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED. SEE ARTICLE 5, CHAPTER 6.75, DIVISION 20, CALIFORNIA HEALTH AND SAFETY CODE.)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in regarding the $0.006 (one-fifth penny) per gallon fee due on the number of gallons placed in your USTs. The BOE will code persons exempt from paying the storage fee to remain with no fee due. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemption, please call the BOE at 916/322-9669 or write to the BOE at the following address: Board of Equalization, Fuel Taxes Division, P.O. Box 942879, Sacramento, CA 94279-0001.

V. PETROLEUM UST FINANCIAL RESPONSIBILITY (MUST BE COMPLETED FOR PETROLEUM USTs ONLY, SEE SECTIONS 2711 (a)(8) OF TITLE 23, CHAPTER 16, CALIFORNIA CODE OF REGULATIONS.)

Identify the method(s) used by the owner and/or operator, in meeting the Federal and State financial responsibility requirements. USTs owned by any Federal or State agency as well as non-petroleum USTs are exempt from this requirement.

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Check ONE BOX for the address that will be used for BOTH LEGAL AND BILLING NOTIFICATIONS.
TANK OWNER OR AUTHORIZED REPRESENTATIVE MUST SIGN AND DATE THE FORM AS INDICATED. [SECTIONS 2711 (a)(13) OF TITLE 23 CHAPTER 16, CALIFORNIA CODE OF REGULATIONS.]

INSTRUCTION FOR THE LOCAL AGENCIES

The county an jurisdiction numbers are predetermined and can be obtained by calling the State Board (916) 227-4303. The facility number may be assigned by the local agency, however, this number must be numerical and cannot contain any alphabetical characters. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS. THE LOCAL AGENCY SHOULD RETAIN THE ORIGINALS AND FORWARD THE YELLOW COPIES TO THE FOLLOWING ADDRESS. THE PINK COPY SHOULD BE RETAINED BY THE TANK OWNER.

WELL INVESTIGATION PROGRAM-COPY ALL CORRESPONDENCE REQUEST, HUGHES MARKETS, (FILE NO. AB108.1711)

This is a follow-up to the meeting held at your Los Angeles County Department of Public Works (LACDPW) office on February 20, 1992, regarding the underground waste storage tank (UWST) that was recently removed, under the jurisdiction of LACDPW, from property owned by Hughes Markets, Inc. at the following address:

Contact: Mr. Norb Parseneault
Hughes Markets, Inc.
14005 East Live Oak Avenue
Irwindale, CA 90071

This Regional Board respectfully requests that your department copy us on all correspondence between you and the owner of the above referenced property regarding UWST removal, remediation/monitoring (if applicable) and closure (report/analytical results) as this Board is currently involved in an ongoing investigation of the redevelopment area which includes this site and wishes to keep informed of all additionally required or future investigations/requirements concerning the site. We also request that you consider, where appropriate, requiring soil, soil vapor and/or ground water samples be analyzed for volatile organic compounds (VOCs) and polychlorinated biphenyls (PCBs).

If you have any questions concerning this matter please contact Rick Kaumeyer at (213) 266-7529 and address all correspondence to his attention.

Monterey Park, CA 91754-2156

I am the chief financial officer for Hughes Family Markets Inc., 14005 Live Oak Ave., Irwindale, CA 91706. This letter is in support of the use of the Underground Storage Tank Cleanup Fund to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $500,000 per occurrence and $1,000,000 annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter: Hughes Markets Distribution Facility. 14005 Live Oak Ave., Irwindale, CA 91706

1. Amount of annual aggregate coverage being assured by this letter:.....$ 1,000,000

2. Total tangible assets:.....$ 291,820,886

3. Total liabilities(if any of the amount on line 2 is included in total liabilities, you may deduct that amount from this line and add that amount to line 4).....$ 167,880,180

4. Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....$ 123,940,706

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1 (d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief. Executed at Hughes Markets on June 21, 1994.

Allan Brennan

Allan Brennan
Chief Financial Officer

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR:

[X] 500,000 dollars per occurrence or [ ] 1 million dollars per occurrence AND [X] 1 million dollars annual aggregate or [ ] 2 million dollars annual aggregate

B. Hughes Markets Inc. *hereby certifies that it is in compliance with the requirements of Section 2807,*
(Name of Tank Owner or Operator)
Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.
The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp.
State Fund			$990,000	continous	yes	yes
CFO Letter			$10,000	"	"	"

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

D. Facility Name	Facility Address
Hughes Markets - Distribution Facility	14005 Live Oak Ave. Irwindale, CA 91706
Facility Name	Facility Address
Facility Name	Facility Address
Facility Name	Facility Address
Facility Name	Facility Address

E. Signature of Tank Owner or Operator	Date	Name and Title of Tank Owner or Operator

INSTRUCTIONS

CERTIFICATION OF FINANCIAL RESPONSIBILITY FORM

Please type or print clearly all information on Certification of Financial Responsibility form. All UST facilities and/or sites owned or operated may be listed on one form; therefore a separate certificate is not required for each site.

DOCUMENT INFORMATION

A. **Amount Required** - Check the appropriate boxes.

B. **Name of Tank Owner or Operator** - Full name of either the tank owner or the operator.

C. **Mechanism Type** - Indicate which State approved mechanism(s) are being used to show financial responsibility either as contained in the federal regulations, 40 CFR, Part 280, Subpart H, Sections 280.90 through 280.103 (See Financial Rponsibility Guide, for more information), or Section 2808.1, Chapter 18, Division 3, Title 23, CCR.

Name of Issuer - List all names and addresses of companies and/or individuals issuing coverage.

Mechanism Number - List identifying number for each mechanism used. Example: insurance policy number or file number as indicated on bond or document. (If using State Cleanup Fund (State Fund) leave blank.)

Coverage Amount - Indicate amount of coverage for each type of mechanism(s). If more than one mechanism is indicated, total must equal 100% of financial responsibility for each facility.

Coverage Period - Indicate the effective date(s) of all financial mechanism(s). (State Fund coverage would be continuous as long as you maintain compliance and remain eligible to continue participation in the Fund.)

Corrective Action - Indicate yes or no. Does the specified financial mechanism provide coverage for corrective action? (If using State Fund, indicate "yes".)

Third Party - Compensation - Indicate yes or no. Does the specified financial mechanism provide coverage for third party compensation? (If using State Fund, indicate "yes".)

D. **Facility - Information** - Provide all facility and/or site names and addresses.

E. **Signature Block** - Provide signature and date signed by tank owner or operator; printed or typed name and title of tank owner or operator; signature of witness or notary and date signed; and printed or typed name of witness or notary (if notary signs as witness, please place notary seal next to notary's signature).

Where to Mail Certification:
Please send original to your local agency (agency who issues your UST permits). Keep a copy of the certification at each facility or site listed on the form.

Questions:
If you have questions on financial responsibility requirements or on the Certification of Financial Responsibility Form, please contact the State UST Cleanup Fund at (916) 227-4307.

Note: Penalties for Failure to Comply with Financial Responsibility Requirements:
Failure to comply may result in: (1) jeopardizing claimant eligibility for the State UST Cleanup Fund, and (2) liability for civil penalties of up to $10,000 dollars per day, per underground storage tank, for each day of violation as stated in Article 7, Section 25299.76(a) of the California Health and Safety Code.

AES HYDROSTATIC PRODUCT LINE TEST WORK SHEET

TEST NO.	PRODUCT	START TIME	END TIME	START VOL. (ml)	END VOL. (ml)	TEST VOL. DIFF. (ml)
1	Dsl.s.	0930	1000	160	155	-.005
1	87nl	1015	1045	147	139	-.008
1	Dsl.n.	11	1130	130	123	-.007

Divide the volume differential by the test time (15 minutes) and multiple by 0.0158311, which will convert the volume differential from milliliters per minute to gallons per hour.

The conversion constant is found by:

(60 nin/hr)/(3790 ml/gal) = 0.0158311(min/hr)(gal/ml)

The conversion constant causes the milliliters and minutes to cancel out.

Ex. If the level dropped 3ml in 15 minutes then:

3/15 ml./min. X 0.0158311(min/hr)(gal/ml) = 0.003 gal/hr.

RESULTS OF THIS WORK SHEET TO BE COMPLIED ON A.E.S. RESULTS SHEET.

INSTRUCTIONS

Hazardous Materials Underground Storage Program
New Construction Plan Clearance, Permit Addendum or Piping Replacement Application

Do not use this form for closure, transfer or renewal of an existing HMUSP.

This application is for authorization to construct or modify hazardous material storage facilities ***only***. A separate Hazardous Materials Underground Storage Permit (***HMUSP***) is required to operate the approved system. This application will not be approved unless a valid ***HMUSP*** application is on file with the Department of Public Works.

A Facility name, mailing address and facility address on this form must correspond with information on Part II of the State *Underground Storage Tank Permit Application Form* **A**.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement or addendum to an existing ***HMUSP***. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational ***HMUSP*** need not make a separate ***HMUSP*** application.

C Plans and specifications submitted for a new construction plan clearance must conform to Department of Public Works' "*Underground Storage of Hazardous Materials Guidelines*" and shall demonstrate compliance with all State and Federal requirements. Piping replacement requires a plan clearance fee for each tank involved.

In addition to the plan clearance fee, a ***HMUSP*** permit fee will be required when applying to construct a new facility. A State Surcharge fee of $56.00 per tank will be required for each tank that increases the net number of tanks. No refund of current year ***HMUSP*** fees due will be allowed for a net decrease in the number of tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacement of piping, change or addition of hazardous material stored, change in monitoring equipment or change of overfill protection.

E A fee of $146.00 must be submitted for each addendum. Where a previously unregistered tank is added to an existing ***HMUSP***, an additional annual fee adjustment of $21.00 per tank is required.

F This form and each State ***Underground Storage Tank Permit Application Form*** must be signed by one of the following:

1. The tank owner.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

ALHAMBRA, CA 91803

PERMIT NO. 6298

EXPIRATION DATE MAY 19 1993

PERMISSION IS HEREBY GRANTED UNDER LACC TITLE 11, DIVISION TO:

16787-3S	<<<<<<<<FILE NUMBER
Hughes Markets 2716 San Fernando Rd. Los Angeles Ca. 90265	<<<<<<<<PERMITTEE
RE: 14005 LIVE OAK AVE	<<<<<<<<FACILITY ADDRESS

TO STORE HAZARDOUS MATERIALS IN UNDERGROUND TANK(S) LOCATED AT THE FACILITY ABOVE.

NUMBER OF PERMITTED TANKS: 3

THIS PROVISIONAL PERMIT IS SUBJECT TO THE FOLLOWING REQUIREMENTS:

PART A -- GENERAL CONDITIONS AND LIMITATIONS (ATTACHED).
PART B -- AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS (ATTACHED).
PART C -- SPECIFIC CONDITIONS AND LIMITATIONS:

1. THE PERMITTEE SHALL SUBMIT FOR APPROVAL AND IMPLEMENT A LEAK DETECTION PROGRAM (LDP) AND A TANK MONITORING PROGRAM (TMP) PREPARED IN ACCORDANCE WITH "UNDERGROUND STORAGE OF HAZARDOUS MATERIALS - GUIDELINES FOR EXISTING FACILITIES, OCTOBER 1986."

2. THE FOLLOWING TIME SCHEDULE SHALL APPLY TO SUBMITTALS REQUIRED BY THIS PROVISIONAL PERMIT:

   a. PERMIT FEE DUE BY (SEE INVOICE) TO BE BILLED

   b. TANK INTEGRITY TEST RESULTS DUE BY N/A

   c. PROPOSALS FOR LDP AND TMP DUE BY N/A

3. PERMIT EFFECTIVE DATE 3-25-92
   NOTE: THE EFFECTIVE DATE IS DETERMINED BY ORIGINAL DATE OF PERMIT APPLICATION.

PART D -- SPECIAL CONDITIONS AND LIMITATIONS ATTACHED. YES [x] NO [ ]

~~This provisional Permit is valid only for the continued operation of tanks providing suitable storage and expires six (6) months from the date of issue.~~ Permittee has until the expiration date to complete an approved LDP and to install and be in compliance with an approved TMP. Upon full compliance with the approved LDP and TMP and all other conditions and limitations, this Provisional Permit will be replaced by a full term from the effective date unless otherwise noted in Part D above.

HAZARDOUS MATERIALS UNDERGROUND [illegible]GE PERMIT
PART A - GENERAL CONDITIONS AND [illegible]ITATIONS

TERM OF PERMIT

1. The combined provisional and full term operational permits shall be valid for a maximum period of five (5) years, from the effective date. However, if the Department of Public Works (DPW) finds that the life expectancy of a facility is less than five (5) years, the DPW may adjust the term of the permit to reflect such a condition.

FEES

2. All fees shall be due and payable on the billing date established by the DPW. Fees not paid within 30 calendar days from the billing date shall be considered delinquent. Delinquent fees shall be subject to a 10 percent penalty fee for each 30 day period beyond the billing date that the fee is due. Permits for which the annual permit fee installment is delinquent for 90 days or more are subject to suspension.

REPORTS AND RECORDS

3. At least annually and due by the anniversary of the effective date of this permit, a written report must be submitted to the Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, CA 91802-1460 detailing (but not limited to) the following:

   a. Any changes in the type of hazardous materials stored within the facility.

   b. Any changes in the uses of the underground facility.

   c. Changes or modifications to monitoring procedure.

   d. A detailed account of any unauthorized discharges, and the remedial measures employed.

   e. Any modifications to the facility except for routine require maintenance.

   In the event there has been no change of operation nor unauthorized release, a negative declaration to that effect may be submitted.

   The report or negative declaration shall be certified by the permittee or an authorized representative who is responsible for operations at the facility.

   This report is required by local agencies to satisfy Section 25286(c) of the State of California Health and Safety Code. A report form will be made available to owners and operators to comply with this requirement. The report shall be delinquent 30 days after its due date and as such may result in suspension or revocation of the permit.

4. Every permittee shall provide testing, monitoring (if applicable), and inspections in compliance with this permit and shall maintain records adequate to demonstrate compliance therewith.

5. All required records shall be maintained by the permittee and made available for inspection for a period of time not less than three (3) years from the date of the required annual report for the year during which the testing, monitoring, or inspection was performed. Said records shall be made available to the DPW, County Health Officer, or Forester and Fire Warden during normal working hours and at any time upon reasonable notice.

RENEWALS AND EXTENSIONS

6. If this is a provisional permit, it may be extended to a maximum of one (1) additional year upon written application stating the reasons for such a request and upon approval by the Director of Public Works.

7. Every application for the renewal of a operational permit or extension of a provisional permit shall be made at least 30 days prior to the expiration date of such permit. If a timely application for renewal has been submitted, the permit shall remain in effect until the DPW has made a decision and any administrative appeal has been exhausted.

APPEALS

8. Any person dissatisfied with the decision of the DPW may appeal the decision, in writing, to the Appeals Board, setting forth with particularity the ground or grounds for the appeal. Such appeal shall be submitted within 30 days after notice of the decision has been given.

ADDITIONAL APPROVALS AND REPAIRS

9. Additional approvals shall be required for any of the following actions:

   a. Tank repair.
   b. Modifications.
   c. Change or addition of hazardous materials stored.
   d. Change of approved monitoring system.

10. Procedures for an application for a permit shall also apply to an application for an additional approval. Each application for an additional approval shall be accompanied by the appropriate fee and supporting information.

11. Any substantial modification or repair of a facility other than minor repairs or emergency repairs shall be in accordance with plans to be submitted to the DPW as an additional approval.

12. Permittee shall carry out routine maintenance, ordinary upkeep and minor repairs in a careful and safe manner. No permit will be required for such maintenance, upkeep and repairs.

13. Permittee may make emergency repairs to a facility in advance of seeking an additional approval whenever an immediate repair is required to prevent or contain an unauthorized discharge or to protect the integrity of the containment. However, within five (5) working days after such emergency repairs have been started, permittee shall seek additional approval by submitting drawings or other information adequate to describe the repairs to the DPW.

CLOSURES, DECONTAMINATION AND NEW CONSTRUCTION

14. Replacement of tanks at an existing facility shall be considered a closure of the tanks to be replaced and a new installation of tanks, and all fees shall be assessed accordingly.

15. No tank shall be abandoned. Tanks which are temporarily out of service, and are intended to be returned to use, must continue to be monitored and inspected must be closed or removed in a manner approved by the DPW.

16. Prior to any permanent or temporary closures being initiated, an Application for Closure form, the appropriate fee and required supporting information shall be filed with the DPW.

17. Plans for the decontamination of a facility shall be submitted to the DPW for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Control Board, the Los Angeles County Department of Health Services and the South Coast Air Quality Management District.

18. The installation of a new tank shall require submittal to the DPW of an application for new construction, the appropriate new construction plan clearance fee and supporting information as required by the DPW.

TRANSFERS

19. A Hazardous Materials Underground Storage Permit may be transferred to a new owner of the same facility provided:

   a. The new owner accepts full responsibility for all obligations under this permit at the time of the transfer of the facility.

   b. The transfer shall be documented on a form provided by the DPW within 30 days of transfer of ownership.

   c. The appropriate fee is paid.

UNAUTHORIZED DISCHARGES

20. As soon as any person in charge of a facility or responsible for emergency response for a facility has knowledge of any confirmed or unconfirmed unauthorized discharge of a hazardous material, such person shall take all necessary steps to ensure the discovery, containment, and cleanup of such discharge and shall notify the DPW of the occurrence as required.

21. Any owner or operator who has knowledge of a confirmed unauthorized discharge shall immediately notify the DPW.

22. Within the jurisdiction of the Los Angeles County Fire Department, an unauthorized discharge shall also be reported to the Los Angeles County Forester and Fire Warden, Fire Prevention and Conservation Bureau.

23. The permittee shall institute and complete all actions necessary to remedy the effects of any unauthorized discharge, whether sudden, or gradual, and supply information on such actions to the DPW.

24. The continued use of, and permit approval for, existing facilities is subject to review and modification or termination by the DPW whenever there has been any unauthorized discharge. In determining whether continued underground storage in such facility is suitable, the DPW shall consider the age of the facility, the methods of containment, the methods of monitoring, the feasibility of the required retrofit, the concentration of the hazardous materials contained, the severity of potential unauthorized discharge and the suitability of other long term preventive measures.

EVALUATION AND INSPECTION

25. Whenever the approval or satisfaction of the DPW may be required for a design, monitoring, testing, or other technical submittal by a permittee, the DPW may require such permittee, at the permittee's sole cost and expense, to retain a suitable qualified independent engineer, chemist, or other appropriate professional consultant acceptable tot he DPW, for the purpose of evaluating and rendering a professional opinion respecting the adequacy of such submittal.

26. The DPW may conduct inspections for the purpose of ascertaining compliance by the permittee and effecting correction of any conditions which would constitute any violation of any statue, code, rule, or regulation affecting the underground storage of hazardous materials.

27. Whenever necessary for the purpose of investigation or enforcement, or whenever a representative of the DPW, County Health Officer, or Forester and Fire Warden has reasonable cause to believe that there exists in any structure or upon any premises any condition which constitutes a violation, said representative may enter such structure, or premises at all reasonable times to inspect the same, or to perform any duty imposed by law.

28. The permittee shall conduct regular inspections of the facility to assure compliance with this permit and shall maintain logs or file reports in accordance with this permit.

29. The DPW may require the periodic employment of special inspectors to conduct any audit or assessment of permittee's facility to make a hazardous materials safety evaluation and to determine compliance.

30. Permittee shall, within 30 days of said evaluation, file with the DPW a plan to implement all recommendations, or shall demonstrate to the satisfaction of the DPW why such recommendations shall not be implemented.

31. The DPW may require that any regular or special inspection by the permittee be made in the presence of a representative of the DPW. The DPW may further require advance notice of not less than 72 hours as to the availability of equipment, material, and personnel required to conduct such inspections.

SUSPENSIONS AND REVOCATIONS

32. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit or if permittee fails to correct unsatisfactory conditions.

33. Failure to adhere to all applicable conditions and limitations of this permit shall constitute a willful violation of Title 11, Division 4 of the Los Angeles County Code and may result in civil or criminal penalties, revocation of this permit, or both.

UNDERGROUND STORAGE TANK PERMIT APPLICATION - FORM A

COMPLETE THIS FORM FOR EACH FACILITY/SITE

MARK ONLY ONE ITEM: ☐ 1 NEW PERMIT ☐ 2 INTERIM PERMIT ☐ 3 RENEWAL PERMIT ☒ 4 AMENDED PERMIT ☐ 5 CHANGE OF INFORMATION ☐ 6 TEMPORARY SITE CLOSURE ☐ 7 PERMANENTLY CLOSED SITE

I. FACILITY/SITE INFORMATION & ADDRESS - (MUST BE COMPLETED)

DBA OR FACILITY NAME	NAME OF OPERATOR	
HUGHES MARKETS		
ADDRESS: 14005 LIVE OAK AVE	NEAREST CROSS STREET: ARROW HWY	PARCEL # (OPTIONAL)
CITY NAME: IRWINDALE	STATE: CA / ZIP CODE: 91706	SITE PHONE # WITH AREA CODE

✓ BOX TO INDICATE: ☒ CORPORATION ☐ INDIVIDUAL ☐ PARTNERSHIP ☐ LOCAL-AGENCY DISTRICTS ☐ COUNTY-AGENCY ☐ STATE-AGENCY ☐ FEDERAL-AGENCY

TYPE OF BUSINESS	✓ IF INDIAN RESERVATION OR TRUST LANDS	# OF TANKS AT SITE	E. P. A. I. D. # (optional)
☐ 1 GAS STATION ☒ 2 DISTRIBUTOR ☐ 3 FARM ☐ 4 PROCESSOR ☐ 5 OTHER	☐	3	

EMERGENCY CONTACT PERSON (PRIMARY)		EMERGENCY CONTACT PERSON (SECONDARY) - optional	
DAYS: NAME (LAST, FIRST)	PHONE # WITH AREA CODE	DAYS: NAME (LAST, FIRST)	PHONE # WITH AREA CODE
CANNON BOB	(805) 499-0428	TARUIS DON	(618) 338-2580
NIGHTS: NAME (LAST, FIRST)	PHONE # WITH AREA CODE	NIGHTS: NAME (LAST, FIRST)	PHONE # WITH AREA CODE
CANNON BOB	(805) 499-3835		

II. PROPERTY OWNER INFORMATION - (MUST BE COMPLETED)

NAME	CARE OF ADDRESS INFORMATION		
HUGHES MARKET			
MAILING OR STREET ADDRESS: 2716 SAN FERNANDO RD	✓ box to indicate: ☒ CORPORATION ☐ INDIVIDUAL ☐ PARTNERSHIP ☐ LOCAL-AGENCY ☐ COUNTY-AGENCY ☐ STATE-AGENCY ☐ FEDERAL-AGENCY		
CITY NAME: LOS ANGELES	STATE: CA	ZIP CODE: 90065	PHONE # WITH AREA CODE: (213) [redacted] 227-8211

III. TANK OWNER INFORMATION - (MUST BE COMPLETED)

NAME OF OWNER	CARE OF ADDRESS INFORMATION		
MAILING OR STREET ADDRESS: SAME AS ABOVE	✓ box to indicate: ☐ CORPORATION ☐ INDIVIDUAL ☐ PARTNERSHIP ☐ LOCAL-AGENCY ☐ COUNTY-AGENCY ☐ STATE-AGENCY ☐ FEDERAL-AGENCY		
CITY NAME	STATE	ZIP CODE	PHONE # WITH AREA CODE

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER - Call (916) 323-9555 if questions arise.

TY (TK) HQ 44-017952

V. PETROLEUM UST FINANCIAL RESPONSIBILITY - (MUST BE COMPLETED) – IDENTIFY THE METHOD(S) USED

✓ box to indicate: ☒ 1 SELF-INSURED ☐ 2 GUARANTEE ☐ 3 INSURANCE ☐ 4 SURETY BOND ☐ 5 LETTER OF CREDIT ☐ 6 EXEMPTION ☒ 99 OTHER

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Legal notification and billing will be sent to the tank owner unless box I or II is checked.

CHECK ONE BOX INDICATING WHICH ABOVE ADDRESS SHOULD BE USED FOR LEGAL NOTIFICATIONS AND BILLING: I. ☐ II. ☒ III. ☐

THIS FORM HAS BEEN COMPLETED UNDER PENALTY OF PERJURY, AND TO THE BEST OF MY KNOWLEDGE, IS TRUE AND CORRECT

APPLICANT'S NAME (PRINTED & SIGNATURE)	APPLICANT'S TITLE	DATE MONTH/DAY/YEAR
BRYAN CANNON Bryan Cannon	Projects	10/22/92

LOCAL AGENCY USE ONLY

COUNTY #	JURISDICTION #	FACILITY #
19	009	16787

LOCATION CODE - *OPTIONAL*	CENSUS TRACT # - *OPTIONAL*	SUPVISOR - DISTRICT CODE - *OPTIONAL*
3S		

THIS FORM MUST BE ACCOMPANIED BY AT LEAST (1) OR MORE PERMIT APPLICATION - FORM B, UNLESS THIS IS A CHANGE OF SITE INFORMATION ONLY.

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

1. One FORM "A" shall be completed for all **NEW PERMITS**, PERMIT **CHANGES** or any FACILITY/SITE INFORMATION CHANGES.
2. **SUBMIT ONLY ONE (1) FORM "A"** for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the PERMIT **APPLICANT** or the **LOCAL AGENCY UNDERGROUND TANK INSPECTOR.**
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK **ONLY ONE ITEM**"

Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and name of the operator.
2. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.).
4. Check the appropriate box for TYPE OF BUSINESS.
5. If Facility/Site is located within an Indian reservation or other Indian trust lands, check the box marked "YES".
6. Indicate the NUMBER of TANKS at this SITE.
7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER **INFORMATION & ADDRESS (MUST BE COMPLETED)**

Complete all items in this section, unless all items are the same as SECTION 1; if the same, write **"SAME AS SITE"** across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1; If the same, write **"SAME AS SITE"** across this section. Be sure to check **TANK OWNERSHIP TYPE** box.

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in reporting the $0.006 (6 mills) per gallon fee due on the number of gallons placed in your USTs. The BOE will code persons exempt from paying the storage fee so returns will not be sent. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemptions, please call the BOE at 916-323-9555 or write to the BOE at the following address: Board of Equalization, Environmental Fees Unit, P.O. Box 942879, Sacramento, CA 94279-0001.

V. PETROLEUM UST FINANCIAL RESPONSIBILITY (MUST BE COMPLETED)

Identify the method(s) used by the owner and/or operator in meeting the Federal and State financial responsibility requirements. USTs owned by any Federal or State agency are exempt from this requirement.

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Check ONE BOX for the address that will be used for **BOTH LEGAL AND BILLING NOTIFICATIONS.**

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number may be assigned by the local agency; however, this number must be numerical and cannot contain any alphabetical. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

FORM B (7-91) THIS FORM MUST BE ACCOMPANIED BY A PERMIT APPLICATION - FORM A, UNLESS A CURRENT FORM A HAS BEEN FILED.

FOR0034B-RS

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all NEW PERMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
2. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB07789).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all NEW PERMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
2. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB00789).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all NEW PERMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
2. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB7089).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

☐ OTHER (ATTACH A WRITTEN STATEMENT)

(G) ALL PERSONS FILING THIS FORM MUST COMPLETE THIS SECTION:

SIGNATURE Donald R. Jarvis TITLE Fleet Maint. Mgr.
PRINTED NAME Donald R. Jarvis DATE 3-23-92

INSTRUCTIONS:

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (***HMUSP***)
APPLICATION SUPPLEMENT

DO NOT USE THIS FORM FOR CLOSURE OR TRANSFER OF AN EXISTING *HMUSP*, A NEW CONSTRUCTION PLAN CHECK, OR AN ADDITIONAL APPROVAL.

(A) Facility name, mailing address and facility address on new permit applications must correspond with information on Part I of the State Form **"A"**, Facility/Site Information. Please correct mailing label information if affixed.

(B) This application supplement is to be used for application to operate and maintain existing tanks located within the jurisdiction of the Department of Public Works. Facilities located within the corporate limits of the cities of Burbank, Glendale, Long Beach, Los Angeles, Pasadena, San Fernando, Santa Monica, Torrance and Vernon should contact the respective local agencies directly for permit information. Permit renewal is authorized only if no ownership change has occurred. Specify the number of tanks at the facility.

(C) Assessor parcel identification is required for new permit applications only.

(D) The applicant is responsible for completing ***all*** information requested on State Forms **"A"** and **"B"**. The Department of Public Works Underground Tank Inspector will not fill out these forms for you. This application is due by the date indicated. If you are unable to submit your ***LDP/TMP*** by the due date, a Provisional ***HMUSP*** will be issued granting up to 90 days to complete your submittal. Evidence of safe storage must be submitted with this application to qualify for a provisional ***HMUSP***.

(E) The total fees to accompany this application represent the ***HMUSP*** application fee, the first annual ***HMUSP*** maintenance fee plus the State surcharge. Future annual ***HMUSP maintenance fees*** will be payable upon billing by the Department of Public Works.

(F) Persons that have been notified to file for a ***HMUSP*** and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in hazardous waste facility permit issued by the California Department of Health Services is not subject to the ***HMUSP*** requirements. Owners of such facilities must furnish a copy of the State permit for facilities where this exclusion is requested.

<u>Final</u> interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, storm drains, oil field gathering lines, well cellars, above ground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a ***HMUSP***. *Claims for exemption are subject to verification.*

(G) This ***HMUSP*** application supplement and each State **"A"** or **"B"** must be signed by:

1) A principal executive officer at the level of vice-president or by an authorized representative. The representative must be responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representative of a public agency.

THIS FORM MUST BE ACCOMPANIED BY AT LEAST (1) OR MORE PERMIT APPLICATION - FORM B, UNLESS THIS IS A CHANGE OF SITE INFORMATION ONLY.

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

1. FORM "A" shall be completed for all NEW PERMITS, PERMIT CHANGES or any FACILITY/SITE INFORMATION CHANGES.
2. SUBMIT ONLY ONE (1) FORM "A" for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and name of the operator.
2. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.)
4. Check the appropriate box for TYPE OF BUSINESS.
5. If Facility/Site is located within an Indian reservation or other Indian trust lands, check the box marked "YES".
6. Indicate the NUMBER of TANKS at this SITE.
7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION I; if the same, write "SAME AS SITE" across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION I; If the same, write "SAME AS SITE" across this section. Be sure to check TANK OWNERSHIP TYPE box.

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in reporting the $0.006 (6 mills) per gallon fee due on the number of gallons placed in your USTs. The BOE will note persons exempt from paying the storage fee so returns will not be sent. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemptions, please call the BOE at 916-323-9555 or write to the BOE at the following address: Board of Equalization, Environmental Fees Unit, P.O. Box 942879, Sacramento, CA 94279-0001.

V. PETROLEUM UST FINANCIAL RESPONSIBILITY (MUST BE COMPLETED)

Identify the method(s) used by the owner and/or operator in meeting the Federal and State financial responsibility requirements. USTs owned by any Federal or State agency are exempt from this requirement.

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Check ONE BOX for the address that will be used for BOTH LEGAL AND BILLING NOTIFICATIONS.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number may be assigned by the local agency; however, this number must be numerical and cannot contain any alphabetical. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

FORM B (9-90) **THIS FORM MUST BE ACCOMPANIED BY A PERMIT APPLICATION - FORM A, UNLESS A CURRENT FORM A HAS BEEN FILED.**

FOR0034B-R4

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all **NEW PERMITS, PERMIT CHANGES, REMOVALS** and/or any other **TANK INFORMATION CHANGE**.
2. This form should be completed by either the **PERMIT APPLICANT** or the **LOCAL AGENCY UNDERGROUND TANK INSPECTOR**.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION – COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

UNDERGROUND STORAGE TANK PERMIT APPLICATION - FORM B

COMPLETE A SEPARATE FORM FOR EACH TANK SYSTEM.

MARK ONLY ONE ITEM: [X] 1 NEW PERMIT; [ ] 2 INTERIM PERMIT; [ ] 3 RENEWAL PERMIT; [ ] 4 AMENDED PERMIT; [ ] 5 CHANGE OF INFORMATION; [ ] 6 TEMPORARY TANK CLOSURE; [ ] 7 PERMANENTLY CLOSED ON SITE; [ ] 8 TANK REMOVED

DBA OR FACILITY NAME WHERE TANK IS INSTALLED: Hughes Market 14005 Live Oak Ave, Irwindale Ca

I. TANK DESCRIPTION

COMPLETE ALL ITEMS -- SPECIFY IF UNKNOWN

A. OWNER'S TANK I. D. #	B. MANUFACTURED BY: Fiusco
C. DATE INSTALLED (MO/DAY/YEAR) 4/92	D. TANK CAPACITY IN GALLONS: 12,000

II. TANK CONTENTS

IF A-1 IS MARKED, COMPLETE ITEM C.

A. [ ] 1 MOTOR VEHICLE FUEL; [ ] 2 PETROLEUM; [ ] 3 CHEMICAL PRODUCT; [ ] 4 OIL; [ ] 80 EMPTY; [ ] 95 UNKNOWN

B. [ ] 1 PRODUCT; [ ] 2 WASTE

C. [ ] 1a REGULAR UNLEADED; [ ] 1b PREMIUM UNLEADED; [ ] 2 LEADED; [X] 3 DIESEL; [ ] 4 GASAHOL; [ ] 5 JET FUEL; [ ] 6 AVIATION GAS; [ ] 7 METHANOL; [ ] 99 OTHER (DESCRIBE IN ITEM D. BELOW)

D. IF (A.1) IS NOT MARKED, ENTER NAME OF SUBSTANCE STORED — C. A. S. # :

III. TANK CONSTRUCTION

MARK ONE ITEM ONLY IN BOXES A, B, AND C, AND ALL THAT APPLIES IN BOX D

A. TYPE OF SYSTEM: [X] 1 DOUBLE WALL; [ ] 2 SINGLE WALL; [ ] 3 SINGLE WALL WITH EXTERIOR LINER; [ ] 4 SECONDARY CONTAINMENT (VAULTED TANK); [ ] 95 UNKNOWN; [ ] 99 OTHER

B. TANK MATERIAL (Primary Tank): [ ] 1 BARE STEEL; [ ] 2 STAINLESS STEEL; [X] 3 FIBERGLASS; [ ] 4 STEEL CLAD W/ FIBERGLASS REINFORCED PLASTIC; [ ] 5 CONCRETE; [ ] 6 POLYVINYL CHLORIDE; [ ] 7 ALUMINUM; [ ] 8 100% METHANOL COMPATIBLE W/FRP; [ ] 9 BRONZE; [ ] 10 GALVANIZED STEEL; [ ] 95 UNKNOWN; [ ] 99 OTHER

C. INTERIOR LINING: [ ] 1 RUBBER LINED; [ ] 2 ALKYD LINING; [ ] 3 EPOXY LINING; [ ] 4 PHENOLIC LINING; [ ] 5 GLASS LINING; [X] 6 UNLINED; [ ] 95 UNKNOWN; [ ] 99 OTHER
IS LINING MATERIAL COMPATIBLE WITH 100% METHANOL? YES ___ NO ___

D. CORROSION PROTECTION: [ ] 1 POLYETHYLENE WRAP; [ ] 2 COATING; [ ] 3 VINYL WRAP; [X] 4 FIBERGLASS REINFORCED PLASTIC; [ ] 5 CATHODIC PROTECTION; [ ] 91 NONE; [ ] 95 UNKNOWN; [ ] 99 OTHER

IV. PIPING INFORMATION

CIRCLE **A** IF ABOVE GROUND OR **U** IF UNDERGROUND, BOTH IF APPLICABLE

A. SYSTEM TYPE	A U 1 SUCTION	A (U) 2 PRESSURE	A U 3 GRAVITY	A U 99 OTHER			
B. CONSTRUCTION	A (U) 1 SINGLE WALL	A U 2 DOUBLE WALL	A U 3 LINED TRENCH	A U 95 UNKNOWN	A U 99 OTHER		
C. MATERIAL AND CORROSION PROTECTION	A U 1 BARE STEEL	A U 2 STAINLESS STEEL	A U 3 POLYVINYL CHLORIDE (PVC)	A (U) 4 FIBERGLASS PIPE			
	A U 5 ALUMINUM	A U 6 CONCRETE	A U 7 STEEL W/ COATING	A U 8 100% METHANOL COMPATIBLE W/FRP			
	A U 9 GALVANIZED STEEL	A U 10 CATHODIC PROTECTION	A U 95 UNKNOWN	A U 99 OTHER			
D. LEAK DETECTION	[X] 1 AUTOMATIC LINE LEAK DETECTOR	[X] 2 LINE TIGHTNESS TESTING	[ ] 3 INTERSTITIAL MONITORING	[ ] 99 OTHER			

V. TANK LEAK DETECTION

[ ] 1 VISUAL CHECK; [ ] 2 INVENTORY RECONCILIATION; [ ] 3 VAPOR MONITORING; [ ] 4 AUTOMATIC TANK GAUGING; [ ] 5 GROUND WATER MONITORING; [ ] 6 TANK TESTING; [X] 7 INTERSTITIAL MONITORING; [ ] 91 NONE; [ ] 95 UNKNOWN; [ ] 99 OTHER

VI. TANK CLOSURE INFORMATION

1. ESTIMATED DATE LAST USED (MO/DAY/YR)	2. ESTIMATED QUANTITY OF SUBSTANCE REMAINING ___ GALLONS	3. WAS TANK FILLED WITH INERT MATERIAL? YES [ ] NO [ ]

THIS FORM HAS BEEN COMPLETED UNDER PENALTY OF PERJURY, AND TO THE BEST OF MY KNOWLEDGE, IS TRUE AND CORRECT

APPLICANT'S NAME (PRINTED & SIGNATURE)	DATE
DONALD R. JARVIS	3-23-92

LOCAL AGENCY USE ONLY

THE STATE I.D. NUMBER IS COMPOSED OF THE FOUR NUMBERS BELOW

STATE I.D.#	COUNTY #	JURISDICTION #	FACILITY #	TANK #
	19	000	16787	2

PERMIT NUMBER	PERMIT APPROVED BY/DATE	PERMIT EXPIRATION DATE
3481A	E.D. 4/22/92	

FORM B (9-90) THIS FORM MUST BE ACCOMPANIED BY A PERMIT APPLICATION - FORM A, UNLESS A CURRENT FORM A HAS BEEN FILED.

FOR00348-R4

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all **NEW PERMITS, PERMIT CHANGES, REMOVALS** and/or any other **TANK INFORMATION CHANGE**.
2. This form should be completed by either the **PERMIT APPLICANT** or the **LOCAL AGENCY UNDERGROUND TANK INSPECTOR**.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all NEW PERMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
2. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS

Hazardous Materials Underground Storage Program
New Construction Plan Clearance or Permit Addendum Application

Do not use this form for closure, transfer or renewal of an existing **HMUSP**.

This application is for authorization to construct or modify hazardous material storage facilities ***ONLY***. A separate Hazardous Materials Underground Storage Permit (**HMUSP**) is required to operate the approved system. This application will not be approved unless a valid **HMUSP** application is on file with the Department of Public Works.

A Facility name, mailing address and facility address on this form must correspond with information on Part II of the State Underground Storage Tank Permit Application Form **A.**

B This application must be submitted for new construction (installation of new tanks) plan clearance or addendum to an existing **HMUSP**. Specify the number of tanks to be installed and the total number of tanks after installation. [redacted] Existing facilities with a valid operational **HMUSP** need not make a separate **HMUSP** application.

C Plans and specifications submitted for a new construction plan clearance must conform to Department of Public Works' "*Underground Storage of Hazardous Materials Guidelines*" and shall demonstrate compliance with all State and Federal requirements.

In addition to the plan clearance fee, a **HMUSP** permit fee will be required when applying to construct a new facility. A State Surcharge fee of $56.00 per tank will be required for each tank that increases the net number of tanks. No refund of current year **HMUSP** fees due will be allowed for an net decrease in the number of tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks or piping, replacement of piping, change or addition of hazardous material stored, change in monitoring equipment or change of overfill protection.

E A fee of $141.00 must be submitted for each addendum.

F This form and each State Underground Storage Tank Permit Application Form must be signed by one of the following:

1. The tank owner.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

NEW UNDERGROUND TANK PLAN CHECK CORRECTIONS

Facility Address: 14005 Live Oak Ave City or Locality Irwindale 91706

Owner Name: Hughes Markets. Phone # (213) 227-8211

Engineer/Contractor: K.E. Curtis Construction Phone # (805) 499-0428

Plan Checker: Emmanuel Okolo Phone # (818) 458-3513

BEFORE APPROVAL FOR INSTALLATION OF UNDERGROUND TANKS, THE PLANS AND/OR APPLICATION FOR THIS INSTALLATION REQUIRE THE INFORMATION, REVISIONS, AND OR CORRECTIONS INDICATED BY THE ITEMS CIRCLED BELOW.

I. INSTRUCTIONS

1. Corrections with circled item numbers apply to this plan check.

2. On the line to the left of the circled corrections please indicate the sheet number of the plans on which the corrections have been made. Resubmit this correction list with ___ sets of the corrected plans.

3. Contact the plan checker to discuss corrections and to make appointment for resubmittal.

II. PLAN CHECK SUBMITTAL

___ 4. Owner must complete and submit a County Hazardous Material Underground Storage Permit (HMUSP) application supplement and one State Tank Permit application form per tank accompanied by appropriate fees for a permit to operate this facility.

___ 5. Facilities subject to SCAQMD Rule 1170 (Methanol Compatible Fuel Storage and Transfer) shall comply with District rules and regulations. Motor vehicle or internal combustion engine fueling facilities claiming exemption in addition to those specified in Rule 1170 shall submit written evidence of exemption from the SCAQMD. IT IS THE APPLICANTS RESPONSIBILITY TO DETERMINE THE APPLICABILITY OF RULE 1170.

___ 6. _____ sets of plans must be submitted including plot plan, cross sections, details and applicable specifications.

___ 7. Status of outstanding Closure Permit(s) _____ and/or Plan Check approval(s) _____ must be clarified.

CONTINUED ON NEXT PAGE

III. PLOT PLAN

___ 8. Plot plan must be to scale and of sufficient size to accurately show location of tank in relation to Item No. 9.

___ 9. Show adjacent, streets, property lines, buildings, utilities, and north arrow.

___ 10. Number all tanks to correspond with designation on the HMUSP application forms. The new tanks must be labeled as to manufacturer, capacities, and material stored. Methanol compatible systems must be clearly identified.

___ 11. Label all product, vapor recovery, vent, and fill lines as to manufacturer, type, material, size, and slope.

___ 12. All non-pressure piping shall slope back to the tank at a 1/4" per foot minimum gradient. write on Plan

___ 13. Label secondary containment as to manufacturer and material and show location of leak detector sensors.

___ 14. Show location and manufacturer of leak detector alarm panel(s) and lines. Existing monitoring system must be shown.

___ 15. List facility/owner name and address at bottom right corner of all plans.

IV. DETAILS

___ 16. Cross sections must reference the applicable tank(s).

___ 17. The cross section must be large enough to clearly detail the tank with all associated piping and manways.

___ 18. Label manholes as to manufacturer and model number. Monitoring manhole(s) must be liquid tight, securable, and traffic rated where applicable. write this on Plans

___ 19. Tanks where secondary containment is not provided for the manway risers or tank fittings shall be equipped with overfill protection that will prevent product from ascending into the risers or fittings.

___ 20. Label fill boxes as to manufacturer and model number.

CONTINUED ON NEXT PAGE

___ 21. Primary vent and Phase II vapor recovery must have ball check valves installed within an extractor assembly.

___ 22. Pressurized product piping must have a flow restrictor (labeled as to manufacturer and model number) and secondary containment with leak detection separate from that of the tank.

___ 23. Provide cross section through the turbine manway showing flow restrictor, piping alignment and details.

___ 24. Pipeline positive pressure shutdown system(s) must be labeled as to manufacturer and model number.

___ 25. The manifolding of primary vent and Phase II vapor recovery lines must adhere to local Fire ordinances, SCAQMD Rules, and sound engineering design.

___ 26. Show location, details and cross sections of monitoring wells and leak detection sensors.

___ 27. State leak detector liquid sensor(s) manufacturer and model number.

___ 28. For all methanol compatible storage systems, clearly stipulate that all readily accessible components which are not methanol compatible for the immediate intended service shall be retrofitted to the fuels into the storage system. A Department of Public Works' system modification approval is required prior to the installation of replacement equipment and/or methanol storage.

V. SPECIAL INSTALLATIONS

___ 29. Special installations (i.e. liner systems, vaulted tanks, etc.) must conform to requirements as outlined in the Hazardous Material Underground Storage Guidelines, Chapter II.

VI. APPROVAL

30. The approval of plans and specifications does not authorize the violation of any rules, codes, or regulations as applied by any local city, county, or state agencies.

31. All other applicable permits and plan check approvals must be obtained from the local city, county, and/or state agencies as required.

CONTINUED ON NEXT PAGE

32. No modifications, additions or substitutions shall be made to systems shown on plans bearing Hazardous Material Underground Storage Clearance without written permission of the Department of Public Works.

33. Upon installation, certification by a manufacturer authorized technician that the monitoring system is installed and operational must be submitted to this office within 30 days.

ADDITIONAL REQUIREMENTS

__ 34. Minimum of 5 gallons is required for overfill Boxes.

The attached _____ sheets are a part of these corrections. This plan check correction will expire on _____.

BY DATE

* ☐ CITY MUNICIPAL SECTIONS APPLY.

AUTHORIZATION FOR CLOSURE
INDUSTRIAL WASTE CONTROL PROGRAM
CONDITIONS AND LIMITATIONS

A. GENERAL

1. This closure authorization is limited to closure of industrial wastewater pretreatment facilities NOT permitted as hazardous waste treatment units pursuant to Chapter 6.5, California Health & Safety Code, or underground storage tanks pursuant to Title 11, Division 4, Los Angeles County Code.

2. All work shall be carried out in full compliance with all applicable Federal, State and local laws, ordinances, rules and regulations.

3. The Waste Management Division (WMD) shall be notified in writing 30 days in advance of any facility closure unless this requirement is specifically waved by the Director of Public Works.

4. The applicant shall demonstrate that no pollution or nuisance will be created by the proposed closure.

5. All fees due to WMD for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid.

6. A fee pursuant to Section 20.36.270, Los Angeles County Code, or applicable city code shall accompany this application.

B. PRIOR TO STARTING WORK

1. All wastewater generating operations tributary to the facility to be closed shall be terminated or directed to alternative approved facilities.

2. All accumulated industrial and/or hazardous wastes shall be removed from the industrial waste pretreatment facility.

3. All required plumbing and/or sewer abandonment permits shall be obtained from the Building Official prior to capping any drains, sewers or private sewer systems.

4. Inspection notification(s) shall be made as directed by this approval.

C. APPLICABLE TO ALL CLOSURES

1. Sewer laterals serving the wastewater pretreatment facility to be closed and any open sewer connections shall be removed or severed and capped immediately downstream from such facility and shall include the removal of sample box, cleanout, trap and vent associated with the facility.

2. The severed outlet line shall be capped off with a fast-setting cement or other approved equivalent material.

3. All inlets, floor sinks, drains, trenches or other fixtures tributary to the pretreatment facility shall be removed or permanently sealed with a fastsetting cement or other approved equivalent material.

4. If at any time evidence of an unauthorized discharge from the facility or tributary facilities is discovered, the applicant shall notify WMD within 24 working hours and shall take all necessary steps to secure any contaminated soils or residues.

5. No work shall be covered until all required inspections have been made.

D. PERMANENT CLOSURE IN PLACE

1. Closure in place is allowed only when specified by this authorization.

2. Prior to backfill, any samples required by this approval shall be taken.

3. Upon completion of all work required above, the pretreatment facility shall be backfilled with sand, pea gravel or other approved material and compacted to within a maximum of 4 inches below grade.

4. The remaining 4 inches (minimum) shall be filled with concrete or equivalent approved material.

5. All backfill operations shall be carried out in compliance in accordance with applicable Building Code requirements.

E. PERMANENT CLOSURE BY REMOVAL

1. Upon completion of all work required by Conditions A through C above, the pretreatment facility shall be excavated and transported to a legal point of disposal.

2. Prior to backfill, any samples required by this approval shall be taken.

3. All excavation and backfill operations shall be carried out in compliance with applicable Building Code requirements.

F. REQUIRED REPORTS

1. Within 30 days of the date of closure, the applicant shall furnish WMD a closure report describing all work done, results of any required sampling, disposition of any contaminated soils or materials found and evidence of compliance with Conditions B1, B2, B3, C4, D2, E1 AND E2.

2. The closure report shall include any additional requirements made a part of this approval.

3. The closure report shall be submitted to:

CLOSURE AUTHORIZATION A302264
INDUSTRIAL WASTE FACILITY
14005 E. Live Oak Ave., Irwindale (35)
Enclosed is your copy of closure authorization for the removal/closure in place of the industrial waste facility named thereon. Compliance with conditions listed on the reverse side of the authorization is necessary to ensure proper closure. You will need to contact the office indicated on the enclosed list no later than 72-hours prior to the start of work. Please note that inspectors can be contacted from 8:00 a.m. to 9:30 a.m. Monday through Friday only.

If you have any questions regarding this matter, please contact Justine Gamboa of this office at (626) 458-3514, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

AUTHORIZATION FOR CLOSURE
INDUSTRIAL WASTE CONTROL PROGRAM
CONDITIONS AND LIMITATIONS

A. GENERAL

1. This closure authorization is limited to closure of industrial wastewater pretreatment facilities NOT permitted as hazardous waste treatment units pursuant to Chapter 6.5, California Health & Safety Code, or underground storage tanks pursuant to Title 11, Division 4, Los Angeles County Code.

2. All work shall be carried out in full compliance with all applicable Federal, State and local laws, ordinances, rules and regulations.

3. The Environmental Programs Division (EPD) shall be notified in writing 30 days in advance of any facility closure unless this requirement is specifically waived by the Director of Public Works.

4. The applicant shall demonstrate that no pollution or nuisance will be created by the proposed closure.

5. All fees due to EPD for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid.

6. A fee pursuant to Section 20.36.270, Los Angeles County Code, or applicable city code shall accompany this application.

B. PRIOR TO STARTING WORK

1. All wastewater generating operations tributary to the facility to be closed shall be terminated or directed to alternative approved facilities.

2. All accumulated industrial and/or hazardous wastes shall be removed from the industrial waste pretreatment facility.

3. All required plumbing and/or sewer abandonment permits shall be obtained from the Building Official prior to capping any drains, sewers or private sewer systems.

4. Inspection notification(s) shall be made as directed by this approval.

C. APPLICABLE TO ALL CLOSURES

1. Sewer laterals serving the wastewater pretreatment facility to be closed and any open sewer connections shall be removed or severed and capped immediately downstream from such facility and shall include the removal of sample box, cleanout, trap and vent associated with the facility.

2. The severed outlet line shall be capped off with a fast-setting cement or other approved equivalent material.

3. All inlets, floor sinks, drains, trenches or other fixtures tributary to the pretreatment facility shall be removed or permanently sealed with a fast setting cement or other approved equivalent material.

4. If at any time evidence of an unauthorized discharge from the facility or tributary facilities is discovered, the applicant shall notify EPD within 24 working hours and shall take all necessary steps to secure any contaminated soils or residues.

5. No work shall be covered until all required inspections have been made.

D. PERMANENT CLOSURE IN PLACE

1. Closure in place is allowed only when specified by this authorization.

2. Prior to backfill, any samples required by this approval shall be taken.

3. Upon completion of all work required above, the pretreatment facility shall be backfilled with sand, pea gravel or other approved material and compacted to within a maximum of 4 inches below grade.

4. The remaining 4 inches (minimum) shall be filled with concrete or equivalent approved material.

5. All backfill operations shall be carried out in compliance and in accordance with applicable Building Code requirements.

E. PERMANENT CLOSURE BY REMOVAL

1. Upon completion of all work required by Conditions A through C above, the pretreatment facility shall be excavated and transported to a legal point of disposal.

2. Prior to backfill, any samples required by this approval shall be taken.

3. All excavation and backfill operations shall be carried out in compliance with applicable Building Code requirements.

F. REQUIRED REPORTS

1. Within 30 days of the date of closure, the applicant shall furnish EPD a closure report describing all work done, results of any required sampling, disposition of any contaminated soils or materials found and evidence of compliance with Conditions B1, B2, B3, C4, D2, E1 and E2.

2. The closure report shall include any additional requirements made a part of this approval.

3. The closure report shall be submitted to:

Mr. Norb Parsoneault
Hughes Market Inc.
2716 N. San Fernando Road
Los Angeles, CA 90065
Dear Mr. Parsoneault:

INDUSTRIAL WASTEWATER DISCHARGE PERMIT(S) NO. 13048(J)

HUGHES MARKET INC.
14005 E. LIVE OAK AVENUE, IRWINDALE

Enclosed is Industrial Wastewater Discharge Permit(s) (IWDP) regulating disposal of waste from operations at the subject location. The permit(s) are issued jointly by the Sanitation Districts of Los Angeles County (SDLAC) and the local sewering agency (city or county) to satisfy permit requirements of the SDLAC Wastewater Ordinance and the local agency Industrial Waste and Sanitary Sewer Ordinance. Additional conditions and limitations have been attached to your IWDP relating to local agency requirements and are an integral part of that permit as are any approved plans submitted with your IWDP application. Your IWDP(S) or copies thereof shall be kept on the premises for which the permit(s) is issued.

Facilities under IWDP are subject to inspection by both SDLAC and the local agency. Department of Public Works Industrial Waste Inspectors perform this function for the local agency with jurisdiction over this IWDP. An Annual industrial waste inspection fee is required to maintain a valid IWDP.

If you have any questions concerning your IWDP, please contact Mr. David Esfandi of this office at (818) 458-3540, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

SANITATION DISTRICTS OF LOS ANGELES COUNTY

Charles W. Carry, Chief Engineer and General Manager
1955 Workman Mill Road, P.O. Box 4998, Whittier, California 90607

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

COMPANY NAME: Hughes Markets, Inc.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO: 13048

DATE OF APPROVAL: April 2, 1992

Hughes Markets, Inc. is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. This industrial wastewater discharge permit is issued only for the discharge of treated wastewater from photofinishing. The discharge of any other type of waste will require prior approval from the Sanitation Districts. This approved permit will expire five (5) years from the date of the accompanying transmittal letter.

2. The permittee is required to notify the Sanitation Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

3. A new permit application must be submitted when there is a significant change in wastewater quantity (25% or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Sanitation Districts' review. Approval must be obtained prior to any construction of new facilities.

4. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any solid wastes from the wastewater pretreatment system and liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.

5. All wastewater discharged to the sewer must have a temperature lower than 140° F.

6. All industrial wastewater discharged to the sewer must not contain over 0.1 milligram/liter of dissolved sulfides.

7. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated.

8. Numerical limits have been established by the Sanitation Districts for the maximum concentrations of heavy metals, and other toxic materials, permissible in an industrial discharge to the public sewers. The limits are those shown in the following list of "Industrial Wastewater Effluent Limitations." Hughes Markets, Inc. is advised that any discharge in excess of these limits requires corrective action by the discharger. Penalties applicable to violations of these limits will be strictly enforced by the Sanitation Districts.

SANITATION DISTRICTS OF LOS ANGELES COUNTY
INDUSTRIAL WASTEWATER LOCAL EFFLUENT LIMITATIONS
FOR JOINT OUTFALL DISTRICTS

PHASE I CONTROL PERIOD

Parameter	Limit (mg/l)*
Arsenic	3
Cadmium	15
Chromium (Total)	10
Copper	15
Lead	40
Mercury	2
Nickel	12
Silver	5
Zinc	25
Cyanide (Total)	10
Total Identifiable Chlorinated Hydrocarbons**	Essentially None

* - Maximum concentration at any time

** - Total Identifiable Chlorinated Hydrocarbons (TICH) comprise:
Aldrin and Dieldrin
Chlordane (cis & trans), trans-nonachlor, oxychlordane, heptachlor and heptachlor epoxide
DDT and derivatives: p, p', and o, p' isomers of DDT, DDD, and DDE
Endrin
HCH: sum of α, β, γ, δ isomers of hexachlorocyclohexane
Toxaphene
Polychlorinated biphenyls (PCB's)

9. The proposed sample box tank is hereby designated as the legal sampling point for Hughes Markets, Inc.. The permittee is responsible for maintaining and cleaning the sampling point to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from this location according to accepted sampling procedure shall be accepted as binding. Safe and convenient access to the sampling point must be provided for representatives of the Sanitation Districts.

10. The permittee is advised that additional industrial wastewater pretreatment equipment may be required if inspection indicates prohibited materials are discharged.

11. Any plans for changes in equipment or processes must be submitted (for approval before implementation) to the Sanitation Districts.

12. The permittee should provide trained personnel for proper operation and regular maintenance of all components of the proposed pretreatment system to ensure compliance at all times with applicable industrial wastewater effluent limits. The permittee should also maintain adequate supply of treatment chemicals as well as replacement parts for key components of the pretreatment system.

13. Self-monitoring of the industrial wastewater must be performed at the intervals indicated on the enclosed Self-Monitoring Requirement Form and reported on the Self-Monitoring Report (SMR) form. (The Districts will send the necessary SMR forms before each reporting period). All indicated analyses should be performed by a State or Sanitation Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Permit Section no later than the due date indicated on the form. Please note that the wastewater samples analyzed must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. It is the responsibility of Hughes Markets, Inc. to submit results from any additional self-monitoring, and to notify the Districts of any other toxic materials which are known to be present in the wastewater.

14. Surcharge tests of the industrial wastewater must be performed at the intervals indicated on the enclosed table of Surcharge Test Frequency and submitted annually with the wastewater treatment surcharge statement. Hughes Markets, Inc. is reminded that the surcharge testing requirements are independent of the tests for self-monitoring reports required in Item No. 13.

15. This approval of the existing pretreatment system by the Sanitation Districts is for only the general concept presented. The proper maintenance and operation of the system is the responsibility of the permittee and his contractors.

16. There are substances that are much less toxic than glycol ether, and just as effective. Hughes Markets, Inc. has 45 days to investigate the possibility of using an alternative product. A report describing the alternatives and plans for waste minimization must be submitted to Mischelle Mische of the Industrial Waste Section at the Sanitation Districts within 45 days from the date of the accompanying transmittal letter.

17. The existing floor drain shall have grated covers with 3/8" maximum openings to prevent larger particles from clogging the sewer.

18. Construction of the proposed treatment units must be completed within 90 days of the accompanying transmittal letter.

19. A letter notifying the Sanitation Districts upon completion of the above requirement must be submitted.

SELF-MONITORING REQUIREMENTS

(Significant Noncategorical Industrial User)

Date April 2, 1992
Firm Name Hughes Markets, Inc.
Situs Address 14005 Live Oak Avenue
Irwindale, CA 91706
Contact Person Norb Parsoneault
Telephone No. (213) 227-8211

Permit No. 13048
Account No. 1956045
District No. 22
SIC No. 5141
Annual Flow (MGY) 1.10

WASTEWATER CHARACTERISTICS TESTING REQUIREMENT

Frequency of Analysis - Once per every three months.

Self-monitoring of industrial wastewater is required as a condition of your industrial wastewater discharge permit. Samples must be collected and preserved in accordance with 40 CFR 136 and analyzed by a Sanitation Districts' or State Department of Health Services' certified laboratory. Test parameters are in Table 1. Self-monitoring results must be reported on the Self-Monitoring Report form provided.

The Self-monitoring Report form and the appropriate laboratory analysis sheet(s) must be submitted in accordance with the dates listed in Table 2. Both the Self-monitoring Report form and the laboratory analysis sheet(s) must be submitted. Self-monitoring Report forms for each reporting period will be distributed one month prior to the beginning of the reporting period. Failure to submit self-monitoring data as required will result in the initiation of enforcement action against your company.

TABLE 1 -REQUIRED WASTEWATER CHARACTERIZATION TESTS

Test Code	Test Parameter	Unit	Limit (mg/l)	Type of Sample
Z01	Total Wastewater Flow Rate	GPD	--	Not Applicable
403	Chemical Oxygen Demand (COD)	mg/l	--	24-hr. Composite
151	Suspended Solids	mg/l	--	24-hr. Composite
101	pH	pH units	>6	Grab
252	Sulfides-Dissolved	mg/l	0.1	Grab
722	Silver	mg/l	5	24-hr. Composite

TABLE 2: SELF-MONITORING REPORTING SCHEDULE[1]		
Analysis Frequency	**Reporting Period**	**Due Date[2]**
Once per year	January 1 -December 31	January 15 (the following year)
Once per 6 months	January 1 - June 30 July 1 - December 31	July 15 January 15
Once per 3 months	January 1 - March 31 April 1 - June 30 July 1 - September 30 October 1 - December 31	April 15 July 15 October 15 January 15
Once per month	Day 1 - Day 31 of the month	Day 15 (the following month)

[1] The laboratory data sheet(s) for each analysis performed during the reporting period must be included with the Self-monitoring Report form. However, only the results from the most recent sample collected during the reporting period should be recorded on the Self-monitoring Report form.

[2] The Self-monitoring Report form may be submitted before the due date as long as the sample is taken during the appropriate reporting period.

SURCHARGE TEST REQUIREMENTS

Industrial users participating in the Sanitation Districts' Surcharge Program may be subject to additional self-monitoring requirements besides those specified in the permit conditions. Surcharge testing parameters include Chemical Oxygen Demand (COD) and suspended solids (SS). For companies that file Long Form Surcharge Statements, the testing frequency for COD and SS is based on flow as shown in Table 4 below. Surcharge wastewater analyses must adequately represent the average daily discharge to the sewer system and the results must be submitted annually with the wastewater treatment surcharge statement in accordance with each year's "Instruction for Filing a Long Form Wastewater Treatment Surcharge Statement." **Surcharge test requirements are independent of the self-monitoring report requirements.**

TABLE 4:
SURCHARGE TESTING FREQUENCY FOR COD AND SS
(Must be 24-hour Composite Samples)

Yearly Cumulative Flow from Each Outlet (in million gallons)	**Required Testing Frequency**
Less than 15.0	1 sample per 3 months
15.01 to 40.00	1 sample per 2 months
40.1 to 100.0	1 sample per month
100.1 to 250.00	1 sample per week
More than 250.0	2 samples per week

CHARLES W. CARRY
Chief Engineer and General Manager

COUNTY SANITATION DISTRICTS OF LOS ANGELES COUNTY

INDUSTRIAL WASTE REVENUE PROGRAM

The County Sanitation Districts of Los Angeles County have implemented two revenue programs to cover capital improvements, operation and maintenance of the sewerage system. These two programs are known as the Wastewater Treatment Surcharge Program and the Connection Fee Program. Each program has its own guidelines and criteria that are associated to the applicability of the discharging company. The following summary is to assist in evaluating the required fee that may be imposed upon your company.

WASTEWATER TREATMENT SURCHARGE PROGRAM:

This is an annual fee for wastewater collection, treatment and disposal services. All industrial companies discharging more than one million gallons of wastewater to the public sewerage system during the fiscal year (July 1 through June 30) are required to file and pay an annual Wastewater Treatment Surcharge Statement. There are three forms available:

1. Short Form Surcharge Statement: To be filed by companies discharging from 1 to 6 million gallons of wastewater per fiscal year.

2. Long Form Surcharge Statement: To be filed by companies discharging more than 6 million gallons of wastewater per fiscal year.

3. Hospital User Charge Statement: To be filed by acute care surgical and acute care psychiatric hospitals.

CONNECTION FEE PROGRAM:

This fee is used for capital improvements and is levied on all industrial companies who wish to be connected to the sewerage system or those companies who increase their discharge by more than 25 percent. For those companies newly connecting to the Districts' sewerage system, this fee must be paid prior to making the connection. For those companies increasing their burden on the sewerage system, a connection fee is to be paid at the time of the increase.

If you have any questions concerning the wastewater treatment or connection fee programs please call the Districts' Industrial Waste Section at extension 2600.

Recycled Paper

SECTION 1.03 – AUTHORITY

The District is empowered to fix fees or charges for the privilege of connecting, directly or indirectly, to its sewerage system and to prescribe, revise, and collect fees, tolls, rates, rentals, or other charges for services and facilities furnished by it.

SECTION 1.04 – ADDITIONAL REVENUE

The revenue provided for hereby shall be in addition to all revenue otherwise collected by or on behalf of the District including, but not limited, to ad valorem taxes, federal and state grants and loans, contract revenue, investment income, annexation fees, service charges, and charges imposed under the District's Wastewater Ordinance.

SECTION 1.05 – ADMINISTRATION

The Chief Engineer shall administer, implement, and enforce the provisions of this Ordinance. Any powers granted to or duties imposed on the Chief Engineer may be delegated by the Chief Engineer to persons acting in the beneficial interest of, or in the employ of the District.

SECTION 1.06 – VALIDITY

If any part, section, subsection, paragraph, sentence, clause or phrase of this Ordinance is held invalid or unconstitutional for any reason by any court, that decision does not affect the validity or constitutionality of the remainder of this Ordinance. The Board of Directors declares that it would have adopted each provision of this Ordinance irrespective of the validity of any other provision.

SECTION 1.07 – SUPERSEDENCE

This Ordinance shall supersede the *Connection Fee Ordinance for County Sanitation District No. 22 of Los Angeles County* adopted on December 15, 1983, with respect to any rights, duties, or privileges arising after the effective date of this Ordinance.

SECTION 1.08 – EFFECTIVE DATE

This Ordinance shall become effective on July 1, 1990.

PART II - DEFINITIONS

This Ordinance shall be construed according to the following definitions:

SECTION 2.01 – ADDED BURDEN

An added burden shall mean any of the following:

(1) A connection, direct or indirect, to the sewerage system for the first time of any structure located on a parcel(s) of land within the District.

(2) An existing connection from a parcel where the number of capacity units attributable to said parcel has been increased due to construction of additional dwelling units or change in land usage.

(3) An existing connection from a parcel from which industrial wastewater is discharged where the number of capacity units attributable to said parcel on a fiscal year basis has increased by more than 25 percent as determined in accordance with Section 3.03 of this Ordinance.

An existing connection from a commercial or institutional parcel where the number of capacity units attributable to said parcel has increased by more than 25 percent.

If more than one independently owned operation exists on a single parcel, an added burden shall also mean an existing connection where the number of capacity units attributable to an independently owned operation has increased by more than 25 percent.

If an independently owned operation or separate operations under single ownership span(s) two or more contiguous parcels, the 25 percent increase shall be measured against the total number of capacity units attributable to the operation(s).

SECTION 2.02 -- BOARD OF DIRECTORS

Board of Directors shall mean the Board of Directors of County Sanitation District No. 22 of Los Angeles County.

SECTION 2.03 -- CAPACITY UNIT

Capacity unit shall mean the burden in terms of capacity that a typical single family home places on the sewerage system based on flow, chemical oxygen demand, and suspended solids.

SECTION 2.04 -- CHIEF ENGINEER

Chief Engineer shall mean the Chief Engineer and General Manager of County Sanitation District No. 22 of Los Angeles County or his duly authorized deputy or agent.

SECTION 2.05 -- COD OR CHEMICAL OXYGEN DEMAND

COD or chemical oxygen demand shall mean the measure of chemically decomposable material in wastewater as represented by the oxygen utilized as determined by the procedures specified in Section 414(A) of the Wastewater Ordinance.

SECTION 2.06 – DISTRICT

District shall mean County Sanitation District No. 22 of Los Angeles County.

SECTION 2.07 – DOMESTIC WASTEWATER

Domestic wastewater shall mean the water carried wastes produced from non-industrial activities and which result from normal living processes irrespective of where these wastes are discharged to the sewerage system. The term *Domestic Wastewater* shall be synonymous with the term *Sanitary Flow*.

SECTION 2.08 – INDUSTRIAL WASTEWATER

Industrial wastewater shall mean all liquid carried wastes of the community excluding domestic wastewater, rainwater, groundwater, stormwater, and drainage of contaminated and uncontaminated water. Industrial wastewater may include all wastewater from any producing, manufacturing, processing,

institutional, commercial, agricultural, or other operation where the wastewater discharged includes significant quantities of wastes of nonhuman origin. All liquid wastes hauled by truck, rail, or another means for disposal to the sewer shall be considered as industrial wastewater regardless of the original source of the wastes. Hauled domestic wastewater is included in the category of industrial wastewater. Discharges of rainwater, groundwater, stormwater, or discharge of contaminated and uncontaminated water approved by the Chief Engineer shall be considered industrial wastewater under this Ordinance.

SECTION 2.09 – JOINT OUTFALL DISTRICTS

Joint Outfall Districts shall mean those Districts signatory to an agreement providing for the ownership and operation of a Joint Outfall System. The current Joint Outfall Districts are South Bay Cities Sanitation District of Los Angeles County, and County Sanitation Districts Nos. 1, 2, 3, 5, 8, 15, 16, 17, 18, 19, 21, 22, 23, and 29 of Los Angeles County.

SECTION 2.10 – LOCAL AGENCY

Local agency includes the County of Los Angeles; a city, whether general law or chartered; a school district; a community redevelopment agency; a municipal corporation; a district; or any board, commission, or agency thereof.

SECTION 2.11 – LOCAL GOVERNMENTAL PARCEL

Local governmental parcel shall mean any parcel which is not subject to the surcharge payment requirement provided for in the District's Wastewater Ordinance and which is owned by a local agency; provided that such parcel is used for a governmental rather than proprietary function and which use is for the direct benefit of the public in general and not for the benefit of a single class or classes of individuals.

SECTION 2.12 – NEXT ANTICIPATED CONFIGURATION

Next anticipated configuration shall mean:

(1) The treatment plant configuration of the next anticipated expansion, provided that facilities for which equivalent upgrades will be constructed at the District's existing treatment plant(s) to make their configuration the same as the anticipated expansion shall not be included; and

(2) An exact replication of the existing sewer system.

SECTION 2.13 – PARCEL

Parcel shall mean real property upon which an assessment is made.

SECTION 2.14 – PERSON

Person shall mean any individual, partnership, committee, association, corporation, public agency, and any other organization or group of persons, public or private.

SECTION 2.15 – MASTER SERVICE CHARGE ORDINANCE OF COUNTY SANITATION DISTRICT NO. 22 OF LOS ANGELES COUNTY

Master Service Charge Ordinance of County Sanitation District No. 22 of Los Angeles County shall mean an Ordinance prescribing fees, tolls, rates, rentals, or other charges for services and facilities furnished by, or available from, County Sanitation District No. 22 of Los Angeles County, and providing for the collection of such charges.

SECTION 2.16 -- SEWERAGE SYSTEM

Sewerage system shall mean the network of wastewater collection, conveyance, treatment, and disposal facilities which are interconnected by means of sewers or any part thereof and either owned in whole or in part by the District or as to which the District has a contractual right of use for which it is obligated to make payment.

SECTION 2.17 -- SUSPENDED SOLIDS

Suspended solids shall mean the insoluble solid matter suspended in wastewater under conditions normally found in the sewer that is separable by laboratory filtration in accordance with the procedures specified in Section 414(A) of the Wastewater Ordinance.

SECTION 2.18 -- UNIT OF USAGE

Unit of usage shall mean the basic unit of measure which quantifies the degree of use of a particular parcel (e.g., dwelling unit, square footage). Square footage of an improvement shall be based upon the gross exterior dimensions of the structure.

SECTION 2.19 – USER CATEGORY

User category shall mean the specific land use classification for a particular parcel which is defined in terms of its use (e.g., single family home, restaurant).

SECTION 2.20 -- WASTEWATER

Wastewater shall mean the liquid carried wastes of the community and all constituents and residues thereof. Wastewater includes domestic and industrial wastewater but does not include rainwater, groundwater, stormwater, or drainage or other water unless otherwise specified in Section 2.08.

SECTION 2.21 – WASTEWATER ORDINANCE

Wastewater Ordinance shall mean the Ordinance providing for the administration of an industrial wastewater control system, for the regulation of sewer construction and sewer use, for the imposition of permit requirements for industrial wastewater dischargers, for the prohibition, regulation, and/or pretreatment of industrial wastewaters, for the imposition of fees and charges, for the distribution of revenue, for the implementation of federal and state pollution control regulations, and for the implementation of other methods of controlling and regulating the discharge of wastewaters as adopted by the County Sanitation Districts of Los Angeles County effective on April 1, 1972, and as amended effective on July 1, 1975, July 1, 1980, July 1, 1983 and November 1, 1989 and as thereafter amended.

PART III - FEES

SECTION 3.01 – CONNECTION FEES

No person shall impose an added burden, as herein defined, to the sewerage system from any parcel within the boundaries of the District until an application for sewer connection has been made and approved by the District and a connection fee has been paid to the District. Local governmental parcels as defined in Section 2.11 shall not be subject to a connection fee under this Ordinance.

Any person imposing an added burden shall pay a connection fee in accordance with this Ordinance. With respect to discharges which constitute an increase in the existing strength and/or quantity of wastewater attributable to a particular parcel or operation already connected, the connection fee shall be based on the increase in anticipated use of the sewerage system.

SECTION 3.02 – CALCULATION OF THE CONNECTION FEE RATE

The total capital cost required to construct an incremental expansion of the sewerage system of the next anticipated configuration shall be determined by the Chief Engineer. In addition, he shall calculate the number of capacity units which can be accommodated by the incremental expansion. He shall then divide the former value by the latter value. The resulting value shall be known as the capital improvement component of the connection fee rate.

The Chief Engineer shall also determine the cash reserves that will be available on July 1 of the same fiscal year in which the connection fee rate is effective. This number shall be divided by the total number of existing sewage units in the District as determined in accordance with the Master Service Charge Ordinance of County Sanitation District No. 22 of Los Angeles County. The resulting figure shall then be added to the service charge rate as adopted by the Board of Directors pursuant to the Master Service Charge Ordinance of County Sanitation District No. 22 of Los Angeles County for the same fiscal year in which the connection fee rate is effective. The total resulting value shall be converted into dollars per capacity unit on the basis that one sewage unit is equivalent to one capacity unit and shall be known as the operational cost component of the connection fee rate.

The sum of the capital improvement and operational cost components shall be known as the connection fee rate. The Board of Directors of the District shall from time to time adopt this connection fee rate to be utilized in Section 3.03 (1) hereof.

SECTION 3.03 – CALCULATION OF THE CONNECTION FEE

(1) The connection fee for any parcel within the Districts boundaries imposing an added burden to the sewerage system shall be based on anticipated use and shall equal the product of the estimated number of capacity units which will result from the added burden, as determined in paragraph (2) of this section, and the connection fee rate determined pursuant to Section 3.02 hereof.

For parcels which are subject to the surcharge payment requirement provided for in the District's Wastewater Ordinance, the connection fee shall be calculated according to Section 3.03(1) above except that the connection fee rate as determined in Section 3.02 shall not include the service charge rate.

(2) The anticipated use of the sewerage system shall be calculated in terms of capacity units (CU).

The number of capacity units (CU) shall be determined by the following formula:

$$CU = X \left(\frac{FLOW_c}{FLOW_{sfh}}\right) + Y \left(\frac{COD_c}{COD_{sfh}}\right) + Z \left(\frac{SS_c}{SS_{sfh}}\right)$$

where:

X = The proportion of the total capital costs required to construct an incremental expansion of the sewerage system of the next anticipated configuration for conveyance, treatment, and disposal of wastewater which is attributable to flow.

Y = The proportion of the total capital costs required to construct an incremental expansion of the sewerage system of the next anticipated configuration for conveyance, treatment, and disposal of wastewater which is attributable to COD,

Z = The proportion of the total capital costs required to construct an incremental expansion of the sewerage system of the next anticipated configuration for conveyance, treatment, and disposal of wastewater which is attributable to suspended solids,

$FLOW_{sfh}$ = Average flow of wastewater from a single family home in gallons per day,

COD_{sfh} = Average loading of COD in the wastewater from a single family home in pounds per day,

SS_{sfh} = Average loading of suspended solids in the wastewater from a single family home in pounds per day,

$FLOW_c$ = Flow of wastewater which will enter the sewerage system via the connection in gallons per day,

COD_c = Loading of COD which will enter the sewerage system via the connection in pounds per day,

SS_c = Loading of suspended solids which will enter the sewerage system via the connection in pounds per day,

and where:

$FLOW_{sfh}$, COD_{sfh}, SS_{sfh}, X, Y, and Z shall be determined from time to time by the Chief Engineer in accordance with accepted engineering standards and shall be adopted by the Board of Directors.

(3) For the purpose of determining the number of capacity units attributable to a parcel from which no industrial wastewater is discharged, flow, COD, and suspended solids loadings shall be based on the following:

(a) The Chief Engineer shall determine the user category that best represents the intended use of the parcel.

(b) The mean loadings per unit of usage corresponding to the appropriate user category shall be multiplied by the number of units of usage that will be located on the parcel to determine the total loadings attributable to the parcel.

(c) A list of user categories and associated mean loadings per unit of usage shall be adopted from time to time by the Board of Directors of the District. The mean loadings per unit of usage for flow in gallons per day, COD in pounds per day, and suspended solids in pounds per day shall be based upon the best data currently available, including updated sampling information and data from other jurisdictions and publications.

(4) For the purpose of determining whether the number of capacity units attributable to a commercial or institutional parcel has increased by more than 25 percent, the existing number of capacity units shall be based upon the units of usage of the parcel existing immediately prior to construction of the improvement or other occurrence that brought about the increased use. If a prior connection fee application had been approved by the District, the existing number of capacity units shall be based upon the highest number of capacity units for which a connection fee application had been approved.

(5) For the purpose of determining the number of capacity units attributable to a parcel from which industrial wastewater is discharged, flow, COD and suspended solids loadings shall be based on the following, including the estimated sanitary wastewater loadings:

(a) For new dischargers, information contained in the Permit for Industrial Wastewater Discharge as defined in the Wastewater Ordinance, or

(b) For existing dischargers, information contained in the current surcharge statement or in any surcharge statement revised as a result of a District audit as provided for in the Wastewater Ordinance or an approved revised Permit for Industrial Wastewater Discharge, or other credible information, including District's monitoring data.

(6) For the purpose of determining whether the number of capacity units attributable to such industrial parcel has increased by more than 25 percent, a baseline number of capacity units upon which to measure an increase shall be based on the highest of the following:

(a) The highest number of capacity units for which a connection fee has been paid, and

(b) The highest number of capacity units for which surcharge payments were made in accordance with the Wastewater Ordinance for fiscal years 1976-77 through 1981-82. An industrial discharger shall have the right to increase its baseline number of capacity units upon:

i) Demonstration to the reasonable satisfaction of the Chief Engineer that the actual discharge was greater than reported in any of the above specified fiscal years; and

ii) The payment with penalty and interest, as provided for in the Wastewater Ordinance, of any additional surcharge that would have been payable under the Wastewater Ordinance had such discharger accurately reported its flow, suspended solids, and COD loadings for any such years including subsequent years, or

(c) The number of capacity units based on water consumption or other credible information for dischargers whose yearly flow does not exceed one million gallons.

The Chief Engineer may, at any time after connection, verify the actual flow, COD, and suspended solids attributable to the added burden. Should a discrepancy exist between measured quantities and the reported quantities of flow, COD, and suspended solids upon which the connection fee had been based, the owner of the parcel shall, upon written notification, pay to the District the difference between the connection fee paid and the amount due on the basis of the verified quantities.

(7) If the number of capacity units attributable to an operation which discharges industrial wastewater has increased by more than 25 percent, the discharger may make an election to demonstrate to the reasonable satisfaction of the Chief Engineer that a modification including operational modification, conservation, or pretreatment will alter the number of capacity units attributable to that business operation to a level which would constitute a 25 percent or less increase.

An election to demonstrate a reduction in the number of capacity units attributable to the business operation must be made in writing to the Chief Engineer within 45 days of mailing or personal service of the notice of charges. A written election under this subsection shall be accompanied by a surety bond, irrevocable letter of credit, assignment of certificate of deposit or such other security as may be approved by the Chief Engineer in such amount as the Chief Engineer determines will reasonably assure payment of the connection fee that will be due in the event the modification has not resulted in the required reduction in the number of capacity units as prescribed above within the demonstration period.

The next full fiscal year, July 1 through June 30, inclusive, which occurs after an election to demonstrate is made shall be the demonstration period upon which a determination of a 25 percent or less increase in the number of capacity units is made. The demonstration shall be based on discharge data for this period. The Chief Engineer may extend the demonstration period provided the applicant can substantiate a necessity for additional time and has requested an extension prior to July 1 of the demonstration year.

At the conclusion of the demonstration period, the Chief Engineer shall evaluate all pertinent data and make a determination as to whether the modification has resulted in the reduction prescribed above.

Upon demonstration that the number of capacity units attributable to the parcel has been reduced to a 25 percent or less increase over the established baseline, the surety bond shall be exonerated or other form of security returned to the discharger.

In the event that the modification has not resulted in the required reduction prescribed above, the applicable connection fee will be based on the connection fee rate effective July 1 of the fiscal year immediately following the demonstration period. This fee will be immediately due and payable upon mailing or personal service of a notice of charges. Unless the connection fee is immediately paid to the District, the District shall utilize the security provided by the discharger to meet such obligation. To the extent that the security is insufficient to pay for the connection fee due, penalty and interest shall accrue in the amounts specified in Section 3.06, 10 days after mailing or personal delivery of a notice of insufficiency provided, however, that the basic penalty of 10% shall accrue immediately upon mailing or personal service of such notice.

AN ORDINANCE PRESCRIBING FEES FOR THE PRIVILEGE OF CONNECTING ANY PARCEL WITHIN THE BOUNDARIES OF COUNTY SANITATION DISTRICT NO. 22 OF LOS ANGELES COUNTY DIRECTLY OR INDIRECTLY TO THE SEWERAGE SYSTEM, OR FOR INCREASING THE STRENGTH AND/OR QUANTITY OF WASTEWATER ATTRIBUTABLE TO A CONNECTED PARCEL WITHIN THE DISTRICT, AND PROVIDING FOR THE COLLECTION OF SUCH CHARGES.

THE BOARD OF DIRECTORS OF COUNTY SANITATION DISTRICT NO. 22 OF LOS ANGELES COUNTY ORDAINS AS FOLLOWS:

Section 4.02 - Capital Improvement Funds

PART I - GENERAL PROVISIONS

SECTION 1.01 – SHORT TITLE

This Ordinance shall be known as the *Master Connection Fee Ordinance of County Sanitation District No. 22 of Los Angeles County* and may be cited as such.

SECTION 1.02 – PURPOSE

The purpose of this Ordinance is to impose charges for the privilege of connecting a parcel within the District, directly or indirectly, to the District's sewerage system as hereinafter defined or for increasing the strength and/or quantity of wastewater attributable to a connected parcel, and to provide for collection of said charges. Funds derived under this Ordinance from the capital improvement portion of the connection fee shall be used only for expansion of capital facilities.

permit review process that the existing discharge has exceeded the permitted capacity by more than 25 percent, a bill will be submitted and issuance of the revised permit will not occur until the connection fee payment has cleared. The connection fee payment is due within 45 days from the date of transmittal.

For connection fees triggered by an annual surcharge filing or audit, a preliminary notification letter is first sent to the discharger which addresses the circumstances of the pending charges. The letter establishes a short comment period which allows the discharger time to present additional information or to set up a conference with Districts' staff to answer questions. The notification letter also advises the discharger of the option to demonstrate a reduction in discharge rather than paying a connection fee, if the discharger believes that modifications to operational procedures or implementation of conservation measures will reduce the discharge to within 25 percent of the existing baseline. Following the comment period, the charges are formalized and a billing is submitted for payment within 45 days. After this deadline, if payment or a properly executed election to demonstrate agreement is not received, an immediate penalty of ten percent is applied to the connection fee and the election to demonstrate option is forfeited. A second billing including the penalty is then submitted for payment within 30 days. If payment is not received by the deadline a secondary penalty of one and one-half percent per month is assessed on the total delinquent connection fee including the initial ten percent penalty until payment is made.

If a company elects to demonstrate a discharge reduction, notification must be submitted in writing and accompanied by a surety bond, letter of credit or certificate of deposit. The security submitted will be based on the current connection fee multiplied by a growth factor which will account for any rate changes which may occur during the demonstration period. The demonstration period is the next full fiscal year which occurs after an election to demonstrate is made. The demonstration is to be evaluated strictly on discharge data for the selected fiscal year. After the fiscal year is over, if the data show that the demonstration was successful (i.e., the capacity units are within 25 percent of the established baseline), the security is returned to the discharger. If the demonstration is not successful, the connection fee will be based on the rate in effect July 1 of the fiscal year immediately following the demonstration period.

For questions regarding the Connection Fee Program, please refer to your District's specific Connection Fee Ordinance or contact the Industrial Waste Section at (213) 699-7411, extension 2600.

070191

SECTION 3.04 – CREDITS

(1) A credit shall be allowed with respect to new construction replacing a demolished building provided said building had been connected to the sewerage system and was demolished subsequent to December 15, 1981 or with respect to a change in use of a building which had been connected to the sewerage system.

The credit for a demolished building for which no connection fee has been paid shall be equal to the connection fee that would have been paid with respect to the most recently demolished building under the terms of this Ordinance and based on the current connection fee rate.

The credit for a change in use of a building which had been connected to the sewerage system but for which no connection fee had been paid shall be based upon the units of usage existing immediately prior to construction of the improvement or occurrence that brought about the increased use and the current connection fee rate.

If a demolished building or a building for which there was a former use had a prior connection fee application approved by the District, the credit provided for above shall be based upon the highest number of capacity units for which a connection fee application had been approved and the current connection fee rate.

The applicant shall demonstrate to the reasonable satisfaction of the Chief Engineer the user category and the number of units of usage applicable to a demolished building or a building for which there was a former use, and whether or not such building was connected to the sewerage system. The credits provided above shall be applicable only to the specific parcel upon which the demolition has occurred and may be allocable by the owner of such parcel if more than one building is being connected.

In no case shall the credit exceed the connection fee.

(2) A credit against the connection fee shall be allowed with respect to any facility to be connected which was constructed and was located within the District prior to March 1, 1977, but has never been connected to the sewer. The amount of the credit shall be equal to the capital improvement portion of the connection fee.

In no case shall the credit exceed the connection fee.

(3) If the Chief Engineer finds that, under certain circumstances, the transfer to a different parcel of a business operation discharging industrial wastewater does not impose any additional burden on the sewerage system, a relocation credit may be provided.

A relocation credit shall be allowed for the relocation to a different parcel of a business operation discharging industrial wastewater upon the following requirements being met:

(a) That essentially the same business operation has been transferred from one parcel to another and such operation was previously connected directly or indirectly to the sewerage system.

(b) That the person responsible for the establishment of the connection fee entitlement or the successor in interest is the same person now making claim to a relocation credit.

(c) That the discharger has demonstrated to the satisfaction of the Chief Engineer that the business operation has been abandoned from the parcel from which the transfer has occurred or has presented a certification in writing that such business operation will be abandoned within 6 months of the District approving an application for connection.

(d) That the Chief Engineer has made a determination that there is adequate capacity in the sewerage system to accommodate connection of the business operation to be transferred.

The relocation credit shall be based upon the difference between the number of capacity units which would be attributable to the business operation prior to transfer had it been located in the District and the number of capacity units which would be attributable to the business operation had it been classified under the user category "dry manufacturing."

Any parcel from which a business operation was transferred and which operation was provided a relocation credit shall have remaining the number of capacity units attributable to the user category "dry manufacturing."

Should the facility not be abandoned within the prescribed period above, the relocation credit shall be revoked and a connection fee with respect to the parcel to which the business operation was transferred shall be due and payable as of the date said parcel was connected to the sewerage system. The connection fee shall equal the product of the number of capacity units upon which the relocation credit was based and the current connection fee rate plus penalty and interest.

Relocation credits shall not be provided to dischargers who have abandoned a parcel for more than 6 months and a subsequent operation has initiated a wastewater discharge on that parcel.

SECTION 3.05 – IMPOSITION AND PAYMENT OF CONNECTION FEE

Payment of the connection fee shall be made prior to the time of imposition of an added burden as that term is defined in Section 2.01 of this Ordinance and before the issuance of a sewer connection permit by the local agency having jurisdiction over land development.

The connection fee shall be paid to the District either in person at the Joint Administration Office of the County Sanitation Districts of Los Angeles County located at 1955 Workman Mill Road, Whittier, California or through the mail by sending the application form and appropriate payment to the County Sanitation Districts of Los Angeles County, P.O. Box 4998, Whittier, CA 90607.

SECTION 3.06 – PENALTY AND INTEREST CHARGES FOR DELINQUENT CONNECTION FEE PAYMENT

Unpaid charges shall become delinquent 45 days after mailing or personal service of a notice of charges for an existing connection, 45 days after an application for connection to the sewerage system, as hereinafter defined, is approved by the District, or 45 days after a connection is made, whichever occurs first. A basic penalty charge of 10 percent of the original unpaid amount shall be added to any connection fee that becomes delinquent. Additional penalties and interest at the maximum rate provided by law shall accrue on the total of all delinquent fees plus penalty charges.

SECTION 3.07 – FEE FOR RETURNED CHECKS

An administrative charge shall be added to the original connection fee in the event a check tendered for payment is not honored for payment. The Chief Engineer shall establish this charge to reflect the District's added cost in processing dishonored checks, up to the maximum amount allowed by law, and may adjust it from time to time as required to continue to reflect the District's added cost.

PART IV - FUNDS

SECTION 4.01 – DISPOSITION OF FUNDS

Connection fee revenue collected pursuant to this Ordinance shall be divided into two parts, the capital improvement portion and the operational cost portion. The capital improvement portion shall be determined by multiplying the total revenue received by the proportion of the connection fee rate attributable to the capital improvement component. The capital improvement portion of the fee shall be deposited into capital improvement funds pursuant to Section 4.02 herein. The remainder of the fee, the operational cost portion, shall be deposited into the District's operating fund.

SECTION 4.02 – CAPITAL IMPROVEMENT FUNDS

The capital improvement portion of connection fee revenue collected pursuant to this Ordinance shall be separated into two separate accounts known as the "Joint Outfall System Capital Improvement Fund" and the "District's Capital Improvement Fund."

The Joint Outfall System Capital Improvement Fund shall be a common fund jointly owned and maintained by the Joint Outfall Districts. The District's Capital Improvement Fund shall be owned and maintained by the District.

That portion of the connection fee which was derived from the capital cost of expansion of the Joint Outfall System conveyance, treatment, and disposal facilities shall be deposited upon collection in the Joint Outfall System Capital Improvement Fund. That portion of the connection fee which was derived from the capital cost of expansion of the District's conveyance facilities shall be deposited upon collection in the District's Capital Improvement Fund.

The Joint Outfall System Capital Improvement Fund shall be used only for expansion of capital facilities for the Joint Outfall System.

The District's Capital Improvement Fund shall be used only for expansion of capital facilities for the District's conveyance system.

PRO TEM Chairperson, Board of Directors
County Sanitation District

Permit No. 13048(J)
File No. I-16728-3S
Date APR 29 1992

INDUSTRIAL WASTE DISPOSAL PERMIT CONDITIONS AND LIMITATIONS

Part A ON-SITE DISPOSAL – PUBLIC SANITARY SEWER

1. Disposal of industrial wastewater to the public sanitary sewer system shall be limited to the flow rate indicated below:

   ☒ a. Local Sewer. The maximum permitted peak flow rate to the sewer shall be 7.5 gallons per minute (gpm).

   ☐ b. Trunk Sewer. Maximum permitted daily flow to the sewer shall be no greater than 25% in excess of the value on line 16 of the attached Permit for Industrial Wastewater Discharge.

2. Pretreatment, monitoring and control facilities required under this permit shall consist of the system(s) indicated below:

   ☒ a. Sampling point prior to combining industrial wastewater flow with domestic wastewater.
   ☐ b. Final gravity separator (clarifier) _____ gallon capacity, _____ stage.
   ☒ c. pH measurement and recording system.
   ☒ d. Automatic pH control.
   ☐ e. Flow measurement.
   ☐ f. Automatic rainwater diversion system with alarm capable of diverting storm flow in excess of the first 0.10 inch of rain from the sanitary sewer system.
   ☐ g. _____

3. Industrial wastewater shall at all times meet the following effluent quality limitations prior to discharge to the sanitary sewer system:

   ☒ a. As specified in **Part D** -- Effluent Quality Limitations.
   ☐ b. Additional quality limitations: _____

4. The permitee shall submit the following periodic reports:

   ☒ a. Self-monitoring and/or industrial wastewater treatment surcharge reports as may be required by the Sanitation Districts of Los Angeles County. ***NOTE: These reports are to be submitted directly to the Sanitation Districts.***
   ☐ b. Self-monitoring compliance reports as described in **Part E** of this permit.

5. All required industrial wastewater collection, pretreatment, monitoring, disposal and sampling facilities must be installed in accordance with approved plans and prior to initiating any discharge to the sewer system.

6. Discharge of any toxic, flammable, explosive, corrosive, radioactive or nonbiodegradable substance to the sanitary sewer is prohibited except as provided in **Part A.3** above.

7. Discharge of uncontaminated cooling water, groundwater, stormwater or surface drainage water to the sanitary sewer is prohibited except as specifically authorized by this permit.

8. Discharge of industrial wastewater to the sanitary sewer with temperatures exceeding 140°F is prohibited.

9. This permit is subject to additional Conditions and Limitations attached:
   Part B -- Wastes Not Authorized for Discharge or Deposits in **Part A**
   Part C -- General Conditions and Limitations
   Part D -- Effluent Quality Limitations
   Part E -- Self-monitoring and Reporting (only if designated in **Part A.4.b)**

10. Other:

LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

Part B - WASTES NOT AUTHORIZED FOR DISCHARGE OR DEPOSIT IN PART A

1. Industrial wastes not specifically authorized for on-site pretreatment, storage, deposit, discharge or disposal in Part A of this permit shall be stored in leakproof containers within an area designated on plans approved by the Department of Public Works pending transport to a legal point of disposal.

2. The permittee shall determine if industrial wastes stored pursuant to Part B.1 above are hazardous wastes as defined in the California Health and Safety Code, Chapter 6.5 and as determined by California Administrative Code, Title 22, Division 4, Chapter 30 and shall manage such wastes as prescribed therein.

3. Hazardous wastes shall only be removed from the premises under a Uniform Hazardous Waste Manifest unless a variance from such documentation has been granted by the California Department of Health Services (DOHS). Generator copies of the uniform Hazardous Waste Manifest shall be maintained by the permittee for not less than 180 days or as directed by DOHS.

4. A copy of the generator's Uniform Hazardous Waste Manifest shall be provided to the Department of Public Works, Waste Management Division, Solid Waste Management Unit, P.O. Box 1460, Alhambra, CA 91802-1460, within 30 days from removal of such wastes from the permittee's premises. NOTE: This requirement is in addition to any Self-Monitoring requirements in Part E of this permit when so designated in Part A.

5. The permittee shall maintain records of the sources, quantity, name and address of hauler, date hauled, and point of legal disposal for non-hazardous industrial wastes and wastes granted a DOHS variance as described in Part B.3 above. Such records shall be kept a minimum of 180 days. A legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a California Regional Waste Quality Control Board and which is in full compliance therewith or a facility authorized to receive such wastes by the jurisdiction(s) regulating the facility and is in full compliance with all permits, regulations and requirements.

6. Discharge of industrial wastewater to a channel, storm drain, stream, river, lake, ocean or other surface waters is prohibited unless authorized by a National Pollutant Discharge Elimination System (NPDES) permit issued by a California Regional Water Quality Control Board or the U.S. Environmental Protection Agency (EPA).

Part C - GENERAL CONDITIONS AND LIMITATIONS

1. A Copy of this permit shall be maintained on the premises where it will be available at all times to operating personnel.

2. Industrial waste pretreatment, storage and disposal operations shall be conducted in such a manner that no nuisances are created.

3. The permittee shall allow representatives of interested governmental agencies concerned with the disposal of industrial waste access at any reasonable time to take samples, inspect operations and review any records required by this permit.

4. The permittee shall secure written approval from this Department before making any additions or modifications which may affect the quantity, quality, or method of disposal of industrial waste materials. Requests or plans for additions or modifications to industrial waste treatment facilities or method of disposal shall be submitted for approval to the Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, CA 91802-1460.

5. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit, if permittee fails to correct unsatisfactory conditions, if any of the Conditions and Limitations of this permit have been violated or if Annual Industrial Waste Inspection Fees, where required, are not paid within 90 days from date of notification.

6. The Director of Public Works may modify this permit by addition, revision, or elimination of conditions and limitations as may be necessary to accomplish the purpose of ordinances and laws covering disposal of waste materials.

7. The permit is valid only for the facility and location named thereon and is not transferable. In the event of any change of ownership, name or control of the industrial waste facilities subject to this permit, the permittee shall notify the Director of Public Works prior to the effective date of such change. Permittee shall also notify the succeeding owner or operator of the existence of this permit by letter, a copy of which shall be forwarded to the Director of Public Works. A new owner shall make application for an Industrial Waste Disposal Permit within 30 days from the date of assuming control of any facility subject to this permit.

8. Facilities subject to this permit shall not be abandoned. Cancellation of this permit may only be authorized pursuant to Los Angeles County Code Section 20.36.220.

Mr. David Esfandi
Dept. of Public Works
Waste Management Div.
900 S. Fremont Avenue
P.O. Box 1460
Alhambra, CA 91802-1460

Dear Mr. Esfandi:

Industrial Wastewater Discharge Permit No. 13048

Hughes Markets, Inc.
14005 Live Oak Avenue
Irwindale, CA 91706

Enclosed are four (4) approved sets of plans and copies of the approved Industrial Wastewater Discharge Permit for the subject company. Please review these for compliance with your requirements, and retain the copies you require for your files. The Applicant's copy of the approved plans and Industrial Wastewater Discharge Permit, along with a copy of this letter and requirement list, should be forwarded to the applicant. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

1. Dwg. C05: Office Building Utility Plan
2. Dwg. P01: Plumbing schedule and symbols
3. Dwg. P02: Plumbing first floor - DWV
4. Dwg. P04: Plumbing first floor - supply
5. Dwg. P06: Plumbing details and risers

Approval of the permit is contingent upon continuing compliance with all applicable Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list. This approved permit will expire five (5) years from the date of approval.

If you have any questions concerning these requirements, please contact Mischelle D. Mische of the Sanitation Districts' Industrial Waste Section at extension 2916.

Very truly yours,

Charles W. Carry

John D. Kilgore
Supervising Civil Engineer

8. Numerical limits have been established by the Sanitation Districts for the maximum concentrations of heavy metals, and other toxic materials, permissible in an industrial discharge to the public sewers. The limits are those shown in the following list of "Industrial Wastewater Effluent Limitations." Hughes Markets, Inc. is advised that any discharge in excess of these limits requires corrective action by the discharger. Penalties applicable to violations of these limits will be strictly enforced by the Sanitation Districts.

HCH: sum of α, β, γ, δ isomers of hexachlorocyclohexane
Toxaphene
Polychlorinated biphenyls (PCB's)

9. The proposed sample box tank is hereby designated as the legal sampling point for Hughes Markets, Inc.. The permittee is responsible for maintaining and cleaning the sampling point to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from this location according to accepted sampling procedure shall be accepted as binding. Safe and convenient access to the sampling point must be provided for representatives of the Sanitation Districts.

10. The permittee is advised that additional industrial wastewater pretreatment equipment may be required if inspection indicates prohibited materials are discharged.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

COMPANY NAME: Hughes Markets, Inc.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO: 13048

DATE OF APPROVAL: April 2, 1992

Hughes Markets, Inc. is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. This industrial wastewater discharge permit is issued only for the discharge of treated wastewater from photofinishing. The discharge of any other type of waste will require prior approval from the Sanitation Districts. This approved permit will expire five (5) years from the date of the accompanying transmittal letter.

2. The permittee is required to notify the Sanitation Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

3. A new permit application must be submitted when there is a significant change in wastewater quantity (25% or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Sanitation Districts' review. Approval must be obtained prior to any construction of new facilities.

4. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any solid wastes from the wastewater pretreatment system and liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.

5. All wastewater discharged to the sewer must have a temperature lower than 140° F.

6. All industrial wastewater discharged to the sewer must not contain over 0.1 milligram/liter of dissolved sulfides.

7. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated.

11. Any plans for changes in equipment or processes must be submitted (for approval before implementation) to the Sanitation Districts.

12. The permittee should provide trained personnel for proper operation and regular maintenance of all components of the proposed pretreatment system to ensure compliance at all times with applicable industrial wastewater effluent limits. The permittee should also maintain adequate supply of treatment chemicals as well as replacement parts for key components of the pretreatment system.

13. Self-monitoring of the industrial wastewater must be performed at the intervals indicated on the enclosed Self-Monitoring Requirement Form and reported on the Self-Monitoring Report (SMR) form. (The Districts will send the necessary SMR forms before each reporting period). All indicated analyses should be performed by a State or Sanitation Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Permit Section no later than the due date indicated on the form. Please note that the wastewater samples analyzed must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. It is the responsibility of Hughes Markets, Inc. to submit results from any additional self-monitoring, and to notify the Districts of any other toxic materials which are known to be present in the wastewater.

14. Surcharge tests of the industrial wastewater must be performed at the intervals indicated on the enclosed table of Surcharge Test Frequency and submitted annually with the wastewater treatment surcharge statement. Hughes Markets, Inc. is reminded that the surcharge testing requirements are independent of the tests for self-monitoring reports required in Item No. 13.

15. This approval of the existing pretreatment system by the Sanitation Districts is for only the general concept presented. The proper maintenance and operation of the system is the responsibility of the permittee and his contractors.

16. There are substances that are much less toxic than glycol ether, and just as effective. Hughes Markets, Inc. has 45 days to investigate the possibility of using an alternative product. A report describing the alternatives and plans for waste minimization must be submitted to Mischelle Mische of the Industrial Waste Section at the Sanitation Districts within 45 days from the date of the accompanying transmittal letter.

17. The existing floor drain shall have grated covers with 3/8" maximum openings to prevent larger particles from clogging the sewer.

18. Construction of the proposed treatment units must be completed within 90 days of the accompanying transmittal letter.

19. A letter notifying the Sanitation Districts upon completion of the above requirement must be submitted.

SELF-MONITORING REQUIREMENTS

(Significant Noncategorical Industrial User)

Date April 2, 1992
Firm Name Hughes Markets, Inc.
Situs Address 14005 Live Oak Avenue
Irwindale, CA 91706
Contact Person Norb Parsoneault
Telephone No. (213) 227-8211

Permit No. 13048
Account No. 1956045
District No. 22
SIC No. 5141
Annual Flow (MGY) 1.10

WASTEWATER CHARACTERISTICS TESTING REQUIREMENT

Frequency of Analysis - Once per every three months.

Self-monitoring of industrial wastewater is required as a condition of your industrial wastewater discharge permit. Samples must be collected and preserved in accordance with 40 CFR 136 and analyzed by a Sanitation Districts' or State Department of Health Services' certified laboratory. Test parameters are in Table 1. Self-monitoring results must be reported on the Self-Monitoring Report form provided.

The Self-monitoring Report form and the appropriate laboratory analysis sheet(s) must be submitted in accordance with the dates listed in Table 2. Both the Self-monitoring Report form and the laboratory analysis sheet(s) must be submitted. Self-monitoring Report forms for each reporting period will be distributed one month prior to the beginning of the reporting period. Failure to submit self-monitoring data as required will result in the initiation of enforcement action against your company.

TABLE 1 -REQUIRED WASTEWATER CHARACTERIZATION TESTS

Test Code	Test Parameter	Unit	Limit (mg/l)	Type of Sample
Z01	Total Wastewater Flow Rate	GPD	--	Not Applicable
403	Chemical Oxygen Demand (COD)	mg/l	--	24-hr. Composite
151	Suspended Solids	mg/l	--	24-hr. Composite
101	pH	pH units	>6	Grab
252	Sulfides-Dissolved	mg/l	0.1	Grab
722	Silver	mg/l	5	24-hr. Composite

TABLE 2: SELF-MONITORING REPORTING SCHEDULE[1]		
Analysis Frequency	**Reporting Period**	**Due Date[2]**
Once per year	January 1 -December 31	January 15 (the following year)
Once per 6 months	January 1 - June 30 July 1 - December 31	July 15 January 15
Once per 3 months	January 1 - March 31 April 1 - June 30 July 1 - September 30 October 1 - December 31	April 15 July 15 October 15 January 15
Once per month	Day 1 - Day 31 of the month	Day 15 (the following month)

[1] The laboratory data sheet(s) for each analysis performed during the reporting period must be included with the Self-monitoring Report form. However, only the results from the most recent sample collected during the reporting period should be recorded on the Self-monitoring Report form.

[2] The Self-monitoring Report form may be submitted before the due date as long as the sample is taken during the appropriate reporting period.

SURCHARGE TEST REQUIREMENTS

Industrial users participating in the Sanitation Districts' Surcharge Program may be subject to additional self-monitoring requirements besides those specified in the permit conditions. Surcharge testing parameters include Chemical Oxygen Demand (COD) and suspended solids (SS). For companies that file Long Form Surcharge Statements, the testing frequency for COD and SS is based on flow as shown in Table 4 below. Surcharge wastewater analyses must adequately represent the average daily discharge to the sewer system and the results must be submitted annually with the wastewater treatment surcharge statement in accordance with each year's "Instruction for Filing a Long Form Wastewater Treatment Surcharge Statement." **Surcharge test requirements are independent of the self-monitoring report requirements.**

TABLE 4:
SURCHARGE TESTING FREQUENCY FOR COD AND SS
(Must be 24-hour Composite Samples)

Yearly Cumulative Flow from Each Outlet (in million gallons)	**Required Testing Frequency**
Less than 15.0	1 sample per 3 months
15.01 to 40.00	1 sample per 2 months
40.1 to 100.0	1 sample per month
100.1 to 250.00	1 sample per week
More than 250.0	2 samples per week

SELF-MONITORING REQUIREMENTS

(Significant Noncategorical Industrial User)

Date April 2, 1992
Firm Name Hughes Markets, Inc.
Situs Address 14005 Live Oak Avenue
Irwindale, CA 91706
Contact Person Norb Parsoneault
Telephone No. (213) 227-8211

Permit No. 13048
Account No. 1956045
District No. 22
SIC No. 5141
Annual Flow (MGY) 1.10

WASTEWATER CHARACTERISTICS TESTING REQUIREMENT

Frequency of Analysis - Once per every three months.

Self-monitoring of industrial wastewater is required as a condition of your industrial wastewater discharge permit. Samples must be collected and preserved in accordance with 40 CFR 136 and analyzed by a Sanitation Districts' or State Department of Health Services' certified laboratory. Test parameters are in Table 1. Self-monitoring results must be reported on the Self-Monitoring Report form provided.

The Self-monitoring Report form and the appropriate laboratory analysis sheet(s) must be submitted in accordance with the dates listed in Table 2. Both the Self-monitoring Report form and the laboratory analysis sheet(s) must be submitted. Self-monitoring Report forms for each reporting period will be distributed one month prior to the beginning of the reporting period. Failure to submit self-monitoring data as required will result in the initiation of enforcement action against your company.

TABLE 1 -REQUIRED WASTEWATER CHARACTERIZATION TESTS

Test Code	Test Parameter	Unit	Limit (mg/l)	Type of Sample
Z01	Total Wastewater Flow Rate	GPD	--	Not Applicable
403	Chemical Oxygen Demand (COD)	mg/l	--	24-hr. Composite
151	Suspended Solids	mg/l	--	24-hr. Composite
101	pH	pH units	>6	Grab
252	Sulfides-Dissolved	mg/l	0.1	Grab
722	Silver	mg/l	5	24-hr. Composite

TABLE 2: SELF-MONITORING REPORTING SCHEDULE[1]		
Analysis Frequency	**Reporting Period**	**Due Date[2]**
Once per year	January 1 -December 31	January 15 (the following year)
Once per 6 months	January 1 - June 30 July 1 - December 31	July 15 January 15
Once per 3 months	January 1 - March 31 April 1 - June 30 July 1 - September 30 October 1 - December 31	April 15 July 15 October 15 January 15
Once per month	Day 1 - Day 31 of the month	Day 15 (the following month)

[1] The laboratory data sheet(s) for each analysis performed during the reporting period must be included with the Self-monitoring Report form. However, only the results from the most recent sample collected during the reporting period should be recorded on the Self-monitoring Report form.

[2] The Self-monitoring Report form may be submitted before the due date as long as the sample is taken during the appropriate reporting period.

SURCHARGE TEST REQUIREMENTS

Industrial users participating in the Sanitation Districts' Surcharge Program may be subject to additional self-monitoring requirements besides those specified in the permit conditions. Surcharge testing parameters include Chemical Oxygen Demand (COD) and suspended solids (SS). For companies that file Long Form Surcharge Statements, the testing frequency for COD and SS is based on flow as shown in Table 4 below. Surcharge wastewater analyses must adequately represent the average daily discharge to the sewer system and the results must be submitted annually with the wastewater treatment surcharge statement in accordance with each year's "Instruction for Filing a Long Form Wastewater Treatment Surcharge Statement." **Surcharge test requirements are independent of the self-monitoring report requirements.**

TABLE 4:
SURCHARGE TESTING FREQUENCY FOR COD AND SS
(Must be 24-hour Composite Samples)

Yearly Cumulative Flow from Each Outlet (In million gallons)	**Required Testing Frequency**
Less than 15.0	1 sample per 3 months
15.01 to 40.00	1 sample per 2 months
40.1 to 100.0	1 sample per month
100.1 to 250.00	1 sample per week
More than 250.0	2 samples per week

P.O. Box 1460
Alhambra, CA 91802-1460

Dear Mr. Esfandi:

Industrial Wastewater Discharge Permit No. 13048

Hughes Markets, Inc.
14005 Live Oak Avenue
Irwindale, CA 91706

Enclosed are four (4) approved sets of plans and copies of the approved Industrial Wastewater Discharge Permit for the subject company. Please review these for compliance with your requirements, and retain the copies you require for your files. The Applicant's copy of the approved plans and Industrial Wastewater Discharge Permit, along with a copy of this letter and requirement list, should be forwarded to the applicant. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

1. Dwg. C05: Office Building Utility Plan
2. Dwg. P01: Plumbing schedule and symbols
3. Dwg. P02: Plumbing first floor - DWV
4. Dwg. P04: Plumbing first floor - supply
5. Dwg. P06: Plumbing details and risers

Approval of the permit is contingent upon continuing compliance with all applicable Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list. This approved permit will expire five (5) years from the date of approval.

If you have any questions concerning these requirements, please contact Mischelle D. Mische of the Sanitation Districts' Industrial Waste Section at extension 2916.

Very truly yours,

Charles W. Carry

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

COMPANY NAME: Hughes Markets, Inc.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO: 13048

DATE OF APPROVAL: April 2, 1992

Hughes Markets, Inc. is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. This industrial wastewater discharge permit is issued only for the discharge of treated wastewater from photofinishing. The discharge of any other type of waste will require prior approval from the Sanitation Districts. This approved permit will expire five (5) years from the date of the accompanying transmittal letter.

2. The permittee is required to notify the Sanitation Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

3. A new permit application must be submitted when there is a significant change in wastewater quantity (25% or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Sanitation Districts' review. Approval must be obtained prior to any construction of new facilities.

4. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any solid wastes from the wastewater pretreatment system and liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.

5. All wastewater discharged to the sewer must have a temperature lower than 140° F.

6. All industrial wastewater discharged to the sewer must not contain over 0.1 milligram/liter of dissolved sulfides.

7. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated.

8. Numerical limits have been established by the Sanitation Districts for the maximum concentrations of heavy metals, and other toxic materials, permissible in an industrial discharge to the public sewers. The limits are those shown in the following list of "Industrial Wastewater Effluent Limitations." Hughes Markets, Inc. is advised that any discharge in excess of these limits requires corrective action by the discharger. Penalties applicable to violations of these limits will be strictly enforced by the Sanitation Districts.

SANITATION DISTRICTS OF LOS ANGELES COUNTY
INDUSTRIAL WASTEWATER LOCAL EFFLUENT LIMITATIONS
FOR JOINT OUTFALL DISTRICTS

PHASE I CONTROL PERIOD

Parameter	Limit (mg/l)*
Arsenic	3
Cadmium	15
Chromium (Total)	10
Copper	15
Lead	40
Mercury	2
Nickel	12
Silver	5
Zinc	25
Cyanide (Total)	10
Total Identifiable Chlorinated Hydrocarbons**	Essentially None

* - Maximum concentration at any time

** - Total Identifiable Chlorinated Hydrocarbons (TICH) comprise:
Aldrin and Dieldrin
Chlordane (cis & trans), trans-nonachlor, oxychlordane, heptachlor and heptachlor epoxide
DDT and derivatives: p, p', and o, p' isomers of DDT, DDD, and DDE
Endrin
HCH: sum of α, β, γ, δ isomers of hexachlorocyclohexane
Toxaphene
Polychlorinated biphenyls (PCB's)

9. The proposed sample box tank is hereby designated as the legal sampling point for Hughes Markets, Inc.. The permittee is responsible for maintaining and cleaning the sampling point to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from this location according to accepted sampling procedure shall be accepted as binding. Safe and convenient access to the sampling point must be provided for representatives of the Sanitation Districts.

10. The permittee is advised that additional industrial wastewater pretreatment equipment may be required if inspection indicates prohibited materials are discharged.

11. Any plans for changes in equipment or processes must be submitted (for approval before implementation) to the Sanitation Districts.

12. The permittee should provide trained personnel for proper operation and regular maintenance of all components of the proposed pretreatment system to ensure compliance at all times with applicable industrial wastewater effluent limits. The permittee should also maintain adequate supply of treatment chemicals as well as replacement parts for key components of the pretreatment system.

13. Self-monitoring of the industrial wastewater must be performed at the intervals indicated on the enclosed Self-Monitoring Requirement Form and reported on the Self-Monitoring Report (SMR) form. (The Districts will send the necessary SMR forms before each reporting period). All indicated analyses should be performed by a State or Sanitation Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Permit Section no later than the due date indicated on the form. Please note that the wastewater samples analyzed must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. It is the responsibility of Hughes Markets, Inc. to submit results from any additional self-monitoring, and to notify the Districts of any other toxic materials which are known to be present in the wastewater.

14. Surcharge tests of the industrial wastewater must be performed at the intervals indicated on the enclosed table of Surcharge Test Frequency and submitted annually with the wastewater treatment surcharge statement. Hughes Markets, Inc. is reminded that the surcharge testing requirements are independent of the tests for self-monitoring reports required in Item No. 13.

15. This approval of the existing pretreatment system by the Sanitation Districts is for only the general concept presented. The proper maintenance and operation of the system is the responsibility of the permittee and his contractors.

16. There are substances that are much less toxic than glycol ether, and just as effective. Hughes Markets, Inc. has 45 days to investigate the possibility of using an alternative product. A report describing the alternatives and plans for waste minimization must be submitted to Mischelle Mische of the Industrial Waste Section at the Sanitation Districts within 45 days from the date of the accompanying transmittal letter.

17. The existing floor drain shall have grated covers with 3/8" maximum openings to prevent larger particles from clogging the sewer.

18. Construction of the proposed treatment units must be completed within 90 days of the accompanying transmittal letter.

19. A letter notifying the Sanitation Districts upon completion of the above requirement must be submitted.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

COMPANY NAME: Hughes Markets, Inc.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO: 13048

DATE OF APPROVAL: April 2, 1992

Hughes Markets, Inc. is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. This industrial wastewater discharge permit is issued only for the discharge of treated wastewater from photofinishing. The discharge of any other type of waste will require prior approval from the Sanitation Districts. This approved permit will expire five (5) years from the date of the accompanying transmittal letter.

2. The permittee is required to notify the Sanitation Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

3. A new permit application must be submitted when there is a significant change in wastewater quantity (25% or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Sanitation Districts' review. Approval must be obtained prior to any construction of new facilities.

4. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any solid wastes from the wastewater pretreatment system and liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.

5. All wastewater discharged to the sewer must have a temperature lower than 140° F.

6. All industrial wastewater discharged to the sewer must not contain over 0.1 milligram/liter of dissolved sulfides.

7. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated.

8. Numerical limits have been established by the Sanitation Districts for the maximum concentrations of heavy metals, and other toxic materials, permissible in an industrial discharge to the public sewers. The limits are those shown in the following list of "Industrial Wastewater Effluent Limitations." Hughes Markets, Inc. is advised that any discharge in excess of these limits requires corrective action by the discharger. Penalties applicable to violations of these limits will be strictly enforced by the Sanitation Districts.

SELF-MONITORING REQUIREMENTS

(Significant Noncategorical Industrial User)

Date April 2, 1992
Firm Name Hughes Markets, Inc.
Situs Address 14005 Live Oak Avenue
Irwindale, CA 91706
Contact Person Norb Parsoneault
Telephone No. (213) 227-8211

Permit No. 13048
Account No. 1956045
District No. 22
SIC No. 5141
Annual Flow (MGY) 1.10

WASTEWATER CHARACTERISTICS TESTING REQUIREMENT

Frequency of Analysis - Once per every three months.

Self-monitoring of industrial wastewater is required as a condition of your industrial wastewater discharge permit. Samples must be collected and preserved in accordance with 40 CFR 136 and analyzed by a Sanitation Districts' or State Department of Health Services' certified laboratory. Test parameters are in Table 1. Self-monitoring results must be reported on the Self-Monitoring Report form provided.

The Self-monitoring Report form and the appropriate laboratory analysis sheet(s) must be submitted in accordance with the dates listed in Table 2. Both the Self-monitoring Report form and the laboratory analysis sheet(s) must be submitted. Self-monitoring Report forms for each reporting period will be distributed one month prior to the beginning of the reporting period. Failure to submit self-monitoring data as required will result in the initiation of enforcement action against your company.

TABLE 1 -REQUIRED WASTEWATER CHARACTERIZATION TESTS

Test Code	Test Parameter	Unit	Limit (mg/l)	Type of Sample
Z01	Total Wastewater Flow Rate	GPD	--	Not Applicable
403	Chemical Oxygen Demand (COD)	mg/l	--	24-hr. Composite
151	Suspended Solids	mg/l	--	24-hr. Composite
101	pH	pH units	>6	Grab
252	Sulfides-Dissolved	mg/l	0.1	Grab
722	Silver	mg/l	5	24-hr. Composite

TABLE 2: SELF-MONITORING REPORTING SCHEDULE[1]		
Analysis Frequency	**Reporting Period**	**Due Date[2]**
Once per year	January 1 -December 31	January 15 (the following year)
Once per 6 months	January 1 - June 30 July 1 - December 31	July 15 January 15
Once per 3 months	January 1 - March 31 April 1 - June 30 July 1 - September 30 October 1 - December 31	April 15 July 15 October 15 January 15
Once per month	Day 1 - Day 31 of the month	Day 15 (the following month)

[1] The laboratory data sheet(s) for each analysis performed during the reporting period must be included with the Self-monitoring Report form. However, only the results from the most recent sample collected during the reporting period should be recorded on the Self-monitoring Report form.

[2] The Self-monitoring Report form may be submitted before the due date as long as the sample is taken during the appropriate reporting period.

SURCHARGE TEST REQUIREMENTS

Industrial users participating in the Sanitation Districts' Surcharge Program may be subject to additional self-monitoring requirements besides those specified in the permit conditions. Surcharge testing parameters include Chemical Oxygen Demand (COD) and suspended solids (SS). For companies that file Long Form Surcharge Statements, the testing frequency for COD and SS is based on flow as shown in Table 4 below. Surcharge wastewater analyses must adequately represent the average daily discharge to the sewer system and the results must be submitted annually with the wastewater treatment surcharge statement in accordance with each year's "Instruction for Filing a Long Form Wastewater Treatment Surcharge Statement." **Surcharge test requirements are independent of the self-monitoring report requirements.**

TABLE 4:
SURCHARGE TESTING FREQUENCY FOR COD AND SS
(Must be 24-hour Composite Samples)

Yearly Cumulative Flow from Each Outlet (in million gallons)	Required Testing Frequency
Less than 15.0	1 sample per 3 months
15.01 to 40.00	1 sample per 2 months
40.1 to 100.0	1 sample per month
100.1 to 250.00	1 sample per week
More than 250.0	2 samples per week

Dear Mr. Esfandi:

Industrial Wastewater Discharge Permit No. 13048

Hughes Markets, Inc.
14005 Live Oak Avenue
Irwindale, CA 91706

Enclosed are four (4) approved sets of plans and copies of the approved Industrial Wastewater Discharge Permit for the subject company. Please review these for compliance with your requirements, and retain the copies you require for your files. The Applicant's copy of the approved plans and Industrial Wastewater Discharge Permit, along with a copy of this letter and requirement list, should be forwarded to the applicant. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

1. Dwg. C05: Office Building Utility Plan
2. Dwg. P01: Plumbing schedule and symbols
3. Dwg. P02: Plumbing first floor - DWV
4. Dwg. P04: Plumbing first floor - supply
5. Dwg. P06: Plumbing details and risers

Approval of the permit is contingent upon continuing compliance with all applicable Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list. This approved permit will expire five (5) years from the date of approval.

If you have any questions concerning these requirements, please contact Mischelle D. Mische of the Sanitation Districts' Industrial Waste Section at extension 2916.

Very truly yours,

Charles W. Carry

To Mr. Humberto Trevino / Sign Dept Mgr Permit 13048

Site Name Hughes Markets Inc

Site Address 14005 E. Live Oak Ave, Irwindale CA 91706-1323

Violations/Instructions:

___ Excessive oil/grease/solids in the pretreatment facilities.

___ The rain diversion system is not working properly.

___ Discharging wastewater to the ground, public, or private property.

___ Industrial Waste facilities are not built according to approved plans.

___ Denied access to Inspector.

___ You must submit a letter to this office outlining the steps that will correct the improper disposal of industrial waste, and/or wastewater.

___ You are required to pump the interceptor and maintain the facility in proper working condition at all times.

X Other Sample Box requires cleaning

X You are directed to have the above violation(s) corrected by 4-27-94 and telephone the office below for a return inspection.

Los Angeles, CA 90065

Dear Mr. Parsoneault:

INDUSTRIAL WASTE DISPOSAL EPRMIT
14005 LIVE OAK AVENUE, IRWINDALE

The application/plans you have submitted have been reviewed by this office, and are NOT approved because additional information is required to allow proper evaluation of your operations and their possible effects on the sewerage system and environment. The plans are hereby returned less one reference copy for our file. Please revise your submittal in accordance with the items indicated below:

1. Submit an industrial wastewater plumbing plan showing all floor drains, floor sinks, service sinks and waste lines and facilities for handling industrial wastewater from the point of origin to the connection to the public sewer. All equipment or facilities generating industrial wastewater must be identified on plans.

2. Processes, equipment, or facilities generating wastewater flow must be identified, described, and shown on the plans. The tanks in the process area should be numbered and a separate schedule provided indicating the dimensions, material make and information on the contents.

3. Provide and show on plans a sampling box (Co. Std. Dwg. I-12). A trap, clean out, and vent are required per County Plumbing Code. The sample box shall be connected downstream of pretreatment facilities and upstream of sanitary waste.

4. A silver recovery unit is required. Provide and indicate its location on the plans. Submit its operational specifications to this office.

5. Provide and show on plans all storage areas for chemicals and/or waste materials stored at the subject facility, with a tank/drum schedule indicating tank capacities, materials of

construction, and contents. Provision for spill containment is required where the materials can enter the sewer system or contaminate the soil. Spill containment should be designed for the volume of the largest tank or 10 percent of the drum total (whichever is greater), plus 6 inches of rainfall over the containment area (if outdoors). Submit a typical detail of the containment curb and specify the materials of construction.

6. Interior walls and floors within all spill containment areas shall be cleaned, repaired and sealed with an epoxy type sealant which is compatible with materials located within said areas. Provide this office with manufacturer's literature of selected sealant and indicate on drawing areas to be sealed.

7. The contact joint for spill containment walls or dikes constructed on existing concrete, masonry, or asphalt shall be bonded to the existing surface. Provide this office with manufacturer's literature of the selected bonding agent and indicate on drawing areas to be bonded.

8. Provide the name of the legal waste hauler that will remove any liquid or solid industrial wastes generated by the facility.

9. No floor drains connected to public sewers shall be allowed in warehouses and other facilities that store toxic or flammable materials.

10. No floor drains shall be allowed in spill containment areas.

11. Return four sets of revised plans to this office within 30 days from the date of this letter.

If you have any questions regarding this matter, please contact Mr. David M. Norris of this office at (818) 458-3526, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

T. A. TIDEMANSON

BEFORE APPROVAL FOR CODE COMPLIANCE OR ISSUANCE OF AN INDUSTRIAL WASTE PERMIT, THE PLANS AND APPLICATION FOR THIS CONSTRUCTION REQUIRE THE INFORMATION, REVISIONS, AND CORRECTIONS INDICATED BY THE CIRCLED ITEMS BELOW. THE APPROVAL OF PLANS AND SPECIFICATIONS DOES NOT PERMIT THE VIOLATIONS OF ANY SECTION OF THE BUILDING CODE OR PLUMBING CODE, OR OTHER COUNTY ORDINANCE, OR STATE LAW.

INSTRUCTIONS

A. Corrections with circled item numbers apply to this plan check.

B. To the right of the circled corrections please indicate the sheet number or note on the plans where the corrections are made. Resubmit the marked original of this correction list, calculations, supporting information, and the required sets of corrected plans. A seperate sheet may be used for response.

C. The plan checker will be available for conference and telephone calls only between the hours of 7:00 a.m. to 5:30 p.m. on the following days: Monday through Thursday. Appointments are recommended. See page 8 of this correction sheet for the name and phone number of the plan checker.

APPLICATION & FEE

1. Complete and sign the County Sanitation Districts Permit Application.

2. Complete and sign the County Industrial Waste Permit Application.

3. Complete and sign the City of _____ Permit Application.

4. Submit [ ] an application fee, [ ] plan review fee of $_____ payable to [ ] Los Angeles County Department of Public Works, [ ] City of _____ [ ] _____.

PLANS

1. Plans should be drawn legibly on sheets minimum size 11" X 17" and maximum 24" X 36".

2. Place the name and address of the Company having the wastewater discharge on the lower right-hand corner of each sheet of the plans.

3. Submit a plot plan drawn to scale showing acreage, adjacent streets and north arrow.

→ 4. Provide a site drainage plan.

→ 5. Submit an industrial wastewater plumbing plan showing all floor drains, floor sinks, service sinks and waste lines and facilities for handling industrial wastewater from the point of origin to the connection to the [✓] public sewer, [ ] private disposal system, [ ] holding facility, [ ] _____. All equipment or facilities generating industrial wastewater must be identified on plans. *

6. Separate sanitary wastes originating from rest rooms, lavatories, drinking fountains, etc., from industrial process wastewater until all industrial wastewater pretreatment or flow measuring steps are completed. Dark Room section and sign shop

7. Processes, equipment, or facilities generating wastewater flow must be identified, described, and shown on the plans. The tanks in the process area should be numbered and a separate schedule provided indicating the dimensions, material make and information on the contents.

8. A gravity seperation interceptor with sampling box is required (Co. Std. Dwg. I-2). Provide and show on plans. Per County Plumbing Code, Title 28, a trap, clean out, and vent are required. The capacity of the interceptor should be designed for minimum of 30 minutes retention time for peak flow discharge rate or minimum of 510 gallons, whichever is larger.

not shown on plans need to see Civil Drawings

Sample box prior to sanitary waste

9. Provide and show on plans a sampling box (Co. Std. Dwg. I-12). A trap, cleanout, and vent are required per County Plumbing Code. The sample box shall be connected downstream of pretreatment facilities and upstream of sanitary waste.

10. A silver recovery unit is required. Provide and indicate its location on the plans. Submit its operational specifications to this office.

11. For systems with chemical pretreatment of wastewater, submit a systematic step-by-step description of the treatment sequence. Show on plans all tanks, piping, equipment, control instruments, valves, etc. and names and amounts of chemicals used daily in the treatment of wastewater. Submit Material Safety Data Sheets (MSDS) for all chemicals with manufacturer's trade name.

12. For all existing wastewater generating operations submit a chemical analysis report of wastewater effluent. The analysis must be performed by a State approved laboratory for all the constituents known to be present in the wastewater. For new operations estimated daily discharge rate, gallons per day, and estimated concentration of the pollutants in the wastewater effluents should be provided on the Critical Parameter Report Forms, copy enclosed.

13. All wastewater effluents having pH lower than 6.0 are prohibited from discharging into the sewer system. pH may be corrected manually by batch neutralization if the discharge is intermittent, or by automatic pH control if continuous. Indicate on the plans the proposed system to be used. For continuous pH control systems a pH recording probe is required in the sampling box, Co. Std. Dwg. I-12.

14. Other:

STORM WATER MANAGEMENT

The introduction of storm water into the sanitary sewer is prohibited. Provide a roof per County Sanitation District standards (copy enclosed), or regrade the facility, or propose methods for reuse of rainwater at your facility. If adequate justification is provided regarding lack of any other alternatives, an approved rainwater diversion system for all outside waste producing areas drained to the sewer may be used. The rainwater diversion system should be per County Dwg. I-7, (copy enclosed). However, for areas more than 10,000 square feet an alternative method must be proposed.

CHEMICAL STORAGE / WASTE HAULING

1. Submit Material Safety Data Sheet for all the chemicals used in the industrial process.

(2.) Provide and show on plans all storage areas for chemicals and/or waste materials stored at the subject facility, with a tank/drum schedule indicating tank capacities, materials of construction, and contents. Provision for spill containment is required where the materials can enter the sewer system or contaminate the soil. Spill containment should be designed for the volume of the largest tank or 10 percent of the drum total (whichever is greater), plus 6 inches rainfall over the containment area (if outdoors). Submit a typical detail of the containment curb and specify the materials of construction.

SHOW LOCATION OF CHEMICAL STORAGE AREAS

(3.) Interior walls and floors within all spill containment areas shall be cleaned, repaired and sealed with an epoxy type sealant which is compatible with materials located within said areas. Provide this office with manufacturer's literature of selected sealant and indicate on drawing areas to be sealed.

If applicable

(4.) The contact joint for spill containment walls or dikes constructed on existing concrete, masonry, or asphalt shall be bonded to the existing surface. Provide this office with manufacturer's literature of the selected bonding agent and indicate on drawing areas to be bonded.

If applicable

5. All tanks containing acid and cyanide materials that are located within the vicinity of each other are required to have a spill containment system installed to prevent the mixing of acid and cyanide spills leading to the evolution of deadly hydogen cyanide (HCN) gas. Other incompatible materials must also be provided with spill containment.

(6.) Provide the name of the legal waste hauler that will remove any liquid or solid industrial wastes generated by the facility.

If applicable

(7.) No floor drains connected to public sewers shall be allowed in warehouses and other facilities that store toxic or flammable materials.

(8.) No floor drains shall be allowed in spill containment areas.

9. Other:

10. CONDENSATE FROM AIR COMPRESSORS SHALL BE COLLECTED AND HAULED TO A LEGAL POINT OF DISPOSAL. COPIES OF THE HAZARDOUS WASTE MANIFEST SHALL BE SUBMITTED TO THE COUNTY OF LOS ANGELES, DEPARTMENT OF PUBLIC WORKS, DIVISION OF WASTE MANAGEMENT.

SEWER ALLOCATION AND SEWER CAPACITY CLEARANCE

In an industrial/commercial zone area, the allocable peak discharge rate to the public sewer from a property is calculated at 0.021 cubic feet per second per acre, equivalent to 9.4 gallons per minute per acre. However, for facilities less than an acre, a maximum discharge rate of 7.5 gallons per minute is allocated. ~~Per above criteria your property does not have enough acreage to~~ justify the proposed peak discharge rate of ___ gallons per minute.

Therefore you must:

A. Obtain a sewer capacity clearance from Land Development Division of this Department. For information, please contact Mr. Augie Ibalio at (818) 458-3772.

B. In lieu of Item (A) above, you may modify your system to reduce the discharge rate to the allocable rate.

Other:

CHEMICAL ANALYSIS REQUIREMENTS

1. For systems with chemical pretreatment of wastewater, submit a systematic step-by-step description of the treatment sequence. Show on plans all tanks, piping, equipment, control instruments, valves, etc., and names and amounts of chemicals used daily in the treatment of wastewater. Submit MSDS for all chemicals with manufacturer's trade name.

2. Furnish chemical analyses of industrial wastewater. Analyses must be performed by a State certified laboratory. You are required to test for:

a)	Flow (Total)	j)	Silver	q)	Phenols (EPA 604)
b)	Flow (Peak)	k)	Zinc	r)	Other
c)	pH	l)	Arsenic		
d)	Oil and Grease	m)	Cyanide (Total)		
e)	Cadmium	n)	Cyanide (Amenable)		
f)	Chromium	o)	Purgeable Halocarbons (EPA 601 or 624)		
g)	Copper				
h)	Lead	p)	Purgeable Aromatics (EPA 602 or 624)		
i)	Nickel				

3. Other:

GENERAL REQUIREMENTS

1. Uncontaminated water such as one-pass cooling water must not be discharged to the sewerage system. Provide plans or other information which describes a method of reuse, recirculation or an alternative means of disposal of one-pass cooling water or other uncontaminated water.

2. Submit pump curves for all pumps that you have selected so that the proposed flow rate can be verified.

3. A closure permit is required for the closure of the _____. A permit fee of $ _____ is required, payable to the County of Los Angeles Department of Public Works.

4. All underground storage facilities are to be reviewed by this office to determine if they would be subject to Los Angeles County Code, Title 11, Division 4, Underground Storage of Hazardous Materials regulations. For information please contact Mr. Bahman Hajialiakbar of this office at (818) 458-3510.

5. Provide a schematic mass balance flow diagram of the plant wastewater sources from water supply to wastewater discharge. Show water and wastewater flow rates, evaporation losses, losses to product, etc.

6. A description of liquid waste materials leaving the plant other than in the industrial wastewater discharged to the sewerage system must be provided, indicating types of materials and daily qualities.

7. Trailer sewage disposal stations shall be designed per County Standard Drawing enclosed. Approval of the County Sanitation Districts of Los Angeles County is required.

8. Other:

REQUIREMENTS FOR CATEGORICAL INDUSTRIES

1. Provide an automatic full-time total flow measurement system with flow indication, totalization, and recording and show on plans.

2. Provide this office with the usable floor area (square feet) of your facility.

3. Submit detailed drawings indicating location, identification, capacity and material of construction for all chemical/rinse tanks and associated plumbing.

4. Indicate frequency and method of cleaning and/or emptying chemical/rinse tanks.

5. Submit a plan showing outdoor storage tanks, spill containment details, cooling tower, fume scrubber and boiler facilities.

6. Furnish chemical analysis and other data required on the enclosed County Sanitation Districts' Critical Parameter Report Form or Additional Information Questionnaire.

7. Submit scaled drawings for all wastewater [ ] pretreatment facilities, [ ] holding facilities.

8. Provide an automatic effluent pH control and recording system and show on plans.

9. A baseline monitoring report is required. Please complete and sign the enclosed report.

10. A total toxic organics survey report is required. Please complete and sign the enclosed report.

11. A secured sampling facility is required. It shall be constructed per Co. Std. Dwg. I-13, copy enclosed.

12. Location of the approved sampling facility shall be approved by this office prior to its installation.

13. Other:

RESTAURANTS AND FOOD PROCESSING OPERATIONS

1. A grease interceptor is required (Co. Std. Dwg. I-15). Provide and show on plans. A trap, clean out, and vent is required per County Plumbing Code. The interceptor shall have a minimum 750-gallons capacity, and shall provide a minimum of 30 minutes retention time at peak flow rate. The interceptor shall have no sampling box.

2. Submit a kitchen equipment schedule and identify the location of each piece of equipment on the plans.

3. Indicate on the plans the location and the horsepower of the proposed garbage disposer.

4. The sewer lines from rest rooms, water fountain, garbage disposer, etc., should by-pass the grease interceptor and be shown connected downstream from it.

5. Indicate by note on the plans that the rangehood filters washwater will be discharged through the grease interceptor or cleaning of the filters will be done off-site by a service company.

6. The plans should be approved by the County Health Department prior to approval from this Department.

7. Indicate on the plans the areas for washing cans, carts, mats, etc. The washwater generated from these operations should be routed through the grease interceptor.

8. Discharge from the dishwasher shall not pass through the grease interceptor.

9. Other:

APPLICATION(S),_____ SETS OF REVISED PLANS AND SUPPORTING INFORMATION MUST BE RETURNED TO [ ] THIS OFFICE, [ ] CITY OF _____ BY_____. ONE SET OF PLANS HAS BEEN RETAINED FOR REFERENCE.

INDUSTRIAL WASTE DISPOSAL PERMIT
14005 LIVE OAK AVENUE, IRWINDALE

The application/plans you have submitted have been reviewed by this office, and are NOT approved because additional information is required to allow proper evaluation of your operations and their possible effects on the sewerage system and environment. The plans are hereby returned less one reference copy for our file. Please revise your submittal in accordance with the items indicated below:

(1) Submit an industrial wastewater plumbing plan showing all floor drains, floor sinks, service sinks and waste lines and facilities for handling industrial wastewater from the point of origin to the connection to the [X] public sewer, ~~[ ] private disposal system, [ ] holding facility, [ ] _____~~. All equipment or facilities generating industrial wastewater must be identified on plans.

(2) Processes, equipment, or facilities generating wastewater flow must be identified, described, and shown on the plans. The tanks in the process area should be numbered and a separate schedule provided indicating the dimensions, material make and information on the contents.

(3) Provide and show on plans a sampling box (Co. Std. Dwg. I-12). A trap, cleanout, and vent are required per County Plumbing Code. The sample box shall be connected downstream of pretreatment facilities and upstream of sanitary waste.

(4) A silver recovery unit is required. Provide and indicate its location on the plans. Submit its operational specifications to this office.

(1) Industrial Waste for Area West of Sepulveda Boulevard

JB:jk(cpt)/RC

(5) Provide and show on plans all storage areas for chemicals and/or waste materials stored at the subject facility, with a tank/drum schedule indicating tank capacities, materials of construction, and contents. Provision for spill containment is required where the materials can enter the sewer system or contaminate the soil. Spill containment should be designed for the volume of the largest tank or 10 percent of the drum total (whichever is greater), plus 6 inches rainfall over the containment area (if outdoors). Submit a typical detail of the containment curb and specify the materials of construction.

(6) Interior walls and floors within all spill containment areas shall be cleaned, repaired and sealed with an epoxy type sealant which is compatible with materials located within said areas. Provide this office with manufacturer's literature of selected sealant and indicate on drawing areas to be sealed.

(7) The contact joint for spill containment walls or dikes constructed on existing concrete, masonry, or asphalt shall be bonded to the existing surface. Provide this office with manufacturer's literature of the selected bonding agent and indicate on drawing areas to be bonded.

(8) Provide the name of the legal waste hauler that will remove any liquid or solid industrial wastes generated by the facility.

(9) No floor drains connected to public sewers shall be allowed in warehouses and other facilities that store toxic or flammable materials.

(10) No floor drains shall be allowed in spill containment areas.

(11) Return four sets of revised plans to this office within 30 days from the date of this letter.

If you have any questions regarding this matter, please contact Mr. Michael Whitehead of this office at (818) 458-3557, Monday through Thursday,

To Mike Whitehead

1.0 Executive Summary

From 1992 to 1998 the property at 5305 Rivergrade Road, Irwindale, California operated a fueling station on-site to service delivery vehicles. The underground storage tanks (USTs), fuel dispensers, and associated piping were removed in July 2003. During the UST removal, visual inspection by others did not report damage or leakage from the USTs. Soil surrounding the USTs did not exhibit discoloration or odor. In addition to the soil excavated to remove the USTs, additional soil was excavated in August and September 2003. The excavations were backfilled with imported fill and resurfaced with six inches of steel-reinforced concrete. The excavations at the UST location extended to depths of 17 to 21 feet below ground surface (bgs) and dispenser excavations ranged from 4 to 11 feet bgs. Approximately 47 tons of hydrocarbon-impacted soil were excavated and removed at this time.

At the completion of the 2003 excavations, maximum total petroleum hydrocarbons as diesel (TPH-d) and methyl tertiary-butyl ether (MTBE) concentrations detected on-site were 15 milligrams per kilogram (mg/kg) (below fuel dispenser FD5) and 0.071 mg/kg (at 17 feet deep at tank T1A), respectively. It was concluded by URS (2003) that additional excavation would undermine the concrete slab adjacent to the building. Subsequently, the LADPW requested additional assessment to evaluate the extent of hydrocarbon-impacted soil on June 10, 2004.

The supplemental assessment was performed in accordance with the Site Assessment Workplan dated November 2, 2006 (ENSR 2005), and correspondence with the LADPW approving the workplan dated December 21, 2005. The assessment included seven soil borings to depths ranging from approximately 35 to 43 feet bgs, and collection of 39 soil samples. The results of the assessment are as follows:

- Benzene was detected at a maximum concentration of 12 mg/kg in soil samples collected from SB-5 at a depth of approximately 20 feet bgs. In general, benzene was not reported in the majority of samples collected above the laboratory practical quantitation limit (PQL).
- Total petroleum hydrocarbons as gasoline (TPH-g) impacts to the soil appear to be localized to shallow soils (10 to 20 feet deep) in the vicinity of the former fuel dispensers. In general, TPH-g concentration attenuate with depth and the majority of laboratory results for TPH-g below 20 feet bgs were not reported at concentrations above the laboratory PQL.
- TPH-d impacts (greater than 100 mg/kg) appear to be localized to shallow soils (10 to 20 feet bgs) in the vicinity of the former fuel dispensers. TPH-d was not detected above the laboratory PQL in soil samples collected at depths from approximately 30 to 35 feet bgs with the exception of SB-6 (69 mg/kg and 38 mg/kg at 30 feet and 35 feet, respectively).
- TPH-g and TPH-d concentrations generally attenuate with depth and are not generally detected above the laboratory PQL in the samples collected from the target depths of the borings (35 to 40 feet).
- According to the Los Angeles County Department of Public Works (LADPW 2006), depth to regional groundwater was approximately 178 feet bgs beneath the site in September 2005.

Based on these observations, it is unlikely that residual hydrocarbons will pose a threat to local groundwater. ENSR recommends that LADPW issue a No Further Action letter for the site.

2.0 Introduction

This report presents the results of confirmation soil sampling at the former Family Hughes Market, 5305 Rivergrade Road, Irwindale, California (Figure 1). This report was prepared by ENSR on behalf of the The Realty Associates Fund V, L.P. (TA Realty). The assessment program was conducted in response to correspondence from the LADPW Environmental Programs Division dated June 13, 2005 requesting vertical and lateral delineation of hydrocarbon-impacted soil. The extent of the petroleum hydrocarbons were not delineated following removal of the USTs and fuel conveyance lines, and subsequent remedial excavation program.

The work was performed in accordance with the LADPW approved Site Assessment Workplan dated November 2, 2005 (ENSR 2005) and subsequent approval in a letter from the LADPW dated December 21, 2005. The following sections summarize the site background, field sampling plan and data collection activities, analytical laboratory program, and the report preparation.

The scope of work included the following tasks:

- Advance two soil borings (SB-1 and SB-2) in the vicinity of the former USTs to a depth of approximately 45 feet bgs.
- Advance five soil borings (SB-3 and SB-7) in the vicinity of former fuel dispensers FD-1, SFD-1, SFD-2, SFD-3, and FD-6 to depths of approximately 35 feet bgs.
- Collect soil samples from each soil boring at approximately five-foot depth intervals to evaluate the extent of residual hydrocarbons in the soil.

Soil boring SB-2 at the former location of UST1 was moved approximately five feet to the northwest of the proposed location because refusal was encountered. Soil boring SB-2 was advanced to a depth of approximately 42 feet bgs rather than the target depth of 45 feet bgs because refusal was encountered. Samples were not collected at the final depths of soil borings SB-1 and SB-2 (45 and 42 feet bgs, respectively) because the sampler was unable to collect soil due to refusal in gravelly soil.

3.0 Background

3.1 Site Status/Site History

The site previously operated a fuel station on-site to serve delivery vehicles. The USTs associated with the gas station were used from 1992 to 1997 to 1998. Two 12,000-gallon diesel double-walled Plasteel USTs, one 12,000-gallon gasoline double-walled Plasteel UST, fuel dispensers, and associated piping were removed by TA Realty on July 23, 2003 (URS 2003). The excavations at the UST location extended to a depth of 17 feet. Observations made during the UST removal did not detect damage or leakage from the USTs, nor did soil surrounding the USTs exhibit discoloration or odor (URS 2003).

Based on TPH data obtained in July 2003, additional soil was excavated in August 2003. Soil was excavated in the vicinity of the former locations of fuel dispensers to depths ranging from 8 to 9.5 bgs, and UST T2 to a depth of approximately 21 feet bgs. On September 28, 2003, a third excavation was performed in the vicinity of the former locations of dispensers FD-1 and FD-2 to a depth of approximately 11 feet bgs to remove residual impacts detected during the previous excavation.

At the completion of the 2003 excavations, maximum TPH-d and MTBE concentrations detected from soil samples collected at the base of the excavation were 15 mg/kg (4 feet deep at FD5) and 0.071 mg/kg (at 17 feet deep at tank T1A), respectively. Based on confirmation soil sampling following this final excavation event, URS (2003) recommended that additional excavation would undermine the concrete slab adjacent to the fieldwork, and that no further excavation be performed. In all, 47 tons of soil was excavated and transported off-site for disposal. The excavations were backfilled with imported fill and resurfaced with six inches of steel-reinforced concrete and a request for site closure was submitted to LADPW.

The LADPW responded to TA Realty in a letter dated June 10, 2004, that additional assessment was required to evaluate the extent of hydrocarbon-impacted soil (Appendix A). In March 2005, URS, on behalf of TA Realty, submitted a workplan to the LADPW proposing two soil borings in the vicinity of UST T1 and UST T2. In electronic correspondence dated June 13, 2005, the LADPW indicated that the subsurface assessment should include up to ten soil borings in the vicinity of UST T1, UST T2, and the fuel dispensers.

In response to the LADPW correspondence, and based on telephone conversations with LADPW, ENSR, on behalf of TA Realty, submitted a site assessment workplan on November 2, 2005 proposing that seven soil borings be installed in the vicinity of the former USTs and fuel dispenser to evaluate the lateral and vertical extent of residual hydrocarbons. The proposed work was approved, via facsimile, by the LADWP on December 21, 2005 (Appendix A).

3.2 Site Geology/Hydrogeology

The site is located in the northern half of the San Gabriel Valley and approximately 3.5 miles south of the San Gabriel Mountains. Soil beneath the site consists primarily of alluvium deposits consisting of unconsolidated gravel and sand (URS 2003). Soil encountered during this assessment consisted primarily of sandy gravel (Appendix B). Previous assessments show that sand and gravel extend to depths greater than 500 feet bgs. The sand and gravel deposits are underlain by older alluvial deposits consisting of gravel, sand, silt, and clay to depths greater than 2,000 feet bgs (URS 2003). The middle and upper Miocene Puente and Topanga Formations underlie the alluvial deposits to an unknown depth (URS 2003).

The site is located in the central area of the San Gabriel Valley Groundwater Basin. The Basin is bounded to the north by the San Gabriel Mountains, to the south and west by the San Jose, Puente, Merced, and Repetto Hills, to the northwest by the Raymond fault, and to the east by uplifted bedrock. The principle water bearing units consist of unconsolidated and semi-consolidated alluvial sediments.

The nearest municipal well to the site is Los Angeles County Well No. 4239H, located approximately 1,700 feet to the south (Figure 1). Depth to water measurements taken from Well No. 4239H in September 2005 indicate that groundwater beneath the site is approximately 178 feet bgs (LADPW 2006). The gradient and flow

direction of the shallow aquifer is not known, but the regional topography suggests that groundwater flows to the south-southwest toward Whittier Narrows (DWR 1988).

4.0 2006 Field Investigation

4.1 Pre-Field Activities

4.1.1 Health and Safety Plan

A Health and Safety Plan (HASP) was prepared for the on-site activities. The HASP provides an assessment of known hazards and evaluations of the risks associated with conducting the field work at the subject property. Available site information has been examined to select and implement appropriate warnings and safeguards for field personnel. A site safety briefing and daily tailgate safety briefs were conducted on site before fieldwork commenced. The HASP was on-site for reference through the duration of the assessment.

4.1.2 Underground Utility Clearance

The proposed boring locations were marked in white spray paint. ENSR contacted Underground Service Alert (USA) to locate and mark the underground utilities in the vicinity of the proposed soil boring location. The USA ticket number assigned was A30390.

4.1.3 Permits

Since the soil borings were on-site and did not encounter the groundwater table, no permits were required from the County of Los Angeles.

4.1.4 Overhead Clearance

The canopy overlying the dispenser islands was removed to facilitate soil borings in the locations requested by the LADPW.

4.2 Borehole Clearance

From January 16 to January 17, 2006, ENSR personnel directed the clearance of seven soil boring locations. Cascade Drilling, Inc. (Cascade) of Norwalk, California, air-knifed the boreholes to depths from approximately four to six feet bgs. The air-knife rig cleared an additional borehole on January 19, 2006

4.3 Soil Boring/Soil Sampling

From January 17 to January 19, 2006, ENSR personnel directed the advancement of two soil borings, SB-1 and SB-2, in the vicinity of the former USTs to total depths of approximately 45 and 42 feet bgs, respectively, (Soil Boring SB-2 at the former location of UST1 encountered refusal at approximately 42 feet bgs.) Five soil borings, SB-3 through SB-7, were drilled in the vicinity of the former fuel dispensers to total depths of approximately 35 feet bgs. Cascade provided hollow-stem auger drilling services utilizing a CME 75 drill rig equipped with continuous flight hollow-stem augers. The locations of the soil borings are shown on Figure 2.

Soil samples were collected between 10 and 45 feet bgs at five-foot intervals using a California-modified split-spoon sampler. Detailed boring logs for this assessment are included in Appendix B. Soil samples were screened for volatile organic vapors using a MiniRAE 2000 photoionization detector (PID) with a 10.6eV lamp, calibrated to isobutylene. Samples retained for laboratory analysis by EPA Method 8260 were field preserved per EPA Method 5035. In addition, a portion of each sample was retained in the brass sample liners and capped with Teflon® end-caps. All samples collected were placed in an ice-cooled chest, and transported to Calscience Environmental Laboratories, Inc. (Calscience) in Garden Grove, California for analysis. Calscience is a state of California-certified hazardous materials testing laboratory (DHS No. 1230).

Sampling equipment was cleaned between borings by washing in a solution of trisodium phosphate and water and rinsed twice with water. Augers were steam-cleaned prior to use and between boreholes. Soil cuttings generated during drilling and decontamination rinseate were temporarily stored in labeled, Department of Transportation (DOT) approved, 55-gallon drums.

4.4 Laboratory Analysis for Soil

Soil samples were analyzed for:

- TPH-g and TPH-d by EPA Method 8015,
- Benzene, toluene, ethylbenzene, and xylenes (BTEX), and oxygenates including di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butanol alcohol (TBA), ethanol, and MTBE by EPA Method 8260B.

4.5 Laboratory Results for Soil

TPH-g, TPH-d, BTEX, and oxygenate compounds were detected at maximum concentrations as follows:

Contaminant	Maximum Concentration	Sample ID	Depth (feet bgs)
TPH-g	240 mg/kg	SB-5-10	10
TPH-d	7,800 mg/kg	SB-5-10	10
Benzene	12 µg/kg	SB-5-20	20
Toluene	1.4 µg/kg	SB-1-20	20
Ethylbenzene	7.0 µg/kg	SB-7-10	10
Xylenes	66 µg/kg	SB-5-10	10
TBA	400 µg/kg	SB-5-20	20

mg/kg = milligrams per kilogram, µg /kg = micrograms per kilogram
Note: Table does not include "B" or estimated values

MTBE, DIPE, ETBE, TAME, and ethanol were not detected in soil above the laboratory practical quantitation limits. Laboratory results for soil are contained in Tables 1 and 2. Historical results for soil are contained in Tables 3 and 4. A copy of the laboratory report and chain-of-custody forms is provided in Appendix C.

4.6 Investigative-Derived Waste Management

Soil cuttings generated during drilling activities and cement blocks generated during the borehole clearance activities was stored in twenty 55-gallon steel drums. One drum containing rinseate water from equipment cleaning was also generated during drilling activities. The drums containing soil and water were transported to a California-certified disposal facility by Philip Services Corporation on February 9, 2006. Copies of the disposal manifests are provided in Appendix D.

5.0 Discussion of Results

Based on the analytical laboratory results for this assessment, the following interpretations were made:

MTBE

Was not detected in soil samples collected during this assessment.

BTEX and fuel oxygenates

- Benzene was detected at a maximum concentration of 12 µg/kg, which is below EPA preliminary remediation goals (PRGs) for benzene in industrial soil (1,400 µg/kg). The majority of laboratory results for benzene are near or below the laboratory detection limit (0.5 mg/kg).
- Toluene (15 µg/kg), ethylbenzene (7.0 µg/kg), xylenes (66 µg/kg), and TBA (400 µg/kg) are also well below EPA PRGs for industrial soil (520,000, 400,000, 420,000, and 61,000,000 µg/kg, respectively).
- Fuel oxygenates DIPE, ETBE, TAME, and ethanol were not detected above the laboratory PQL in soil samples collected during the assessment.

TPG-g

- TPH-g was detected above the laboratory PQL in one soil sample (SB-2-40) at a concentration of 0.45 mg/kg.
- TPH-g impacts to the soil appear to be localized to shallow soils (10 to 20 feet deep) in the vicinity of the former fuel dispensers. In general, TPH-g concentration attenuate with depth and the majority of laboratory results for TPH-g below 20 feet bgs were not detected at concentrations above the laboratory PQL.

TPH-d

- TPH-d concentrations were not detected in the vicinity of the former USTs. No TPHd was detected at the former UST UST2 (SB-1) to a depth of 40 feet. Low concentrations of TPH-d (below 100 mg/kg) were detected below UST1 (SB-2)
- Significant TPH-d impacts (greater than 100 mg/kg) to the soil appear to be localized to shallow soils (10 to 20 feet bgs) in the vicinity of the former fuel dispensers. TPH-d was not detected above the laboratory PQL in soil samples collected at depths from approximately 30 to 35 feet bgs with the exception of SB-6 (69 mg/kg and 38 mg/kg at 30 feet and 35 feet, respectively).

6.0 Conclusions and Recommendations

ENSR recommends that no further work be conducted at the site based on the following observations:

- TPH-g and TPH-d concentration attenuate with depth and are not detected above the laboratory PQL in the samples from the final depths if the borings (35 to 40 feet).
- The lateral and vertical extents of residual hydrocarbons are limited to depths ranging from 10 to 20 feet bgs at concentrations above 100 mg/kg.
- BTEX was detected at concentrations orders of magnitude below EPA PRGs and MTBE was not detected in soil samples collected during the assessment.
- Approximately 47 tons of hydrocarbon-impacted soil were removed during three excavation events in 2003.
- Depth to water reportedly occurs at a depth of approximately 200 feet bgs.

Based on these observations, it is unlikely that residual hydrocarbons will pose a threat to local groundwater.

EXPLANATIONS:

(ft.) = Feet
(msl) = Mean sea level
(µg/kg) = Micrograms per kilogram
(mg/kg) = Milligrams per kilogram
-- = Not Measured/Not Analyzed
Trip Blank results in micrograms per liter.

TPH-G = Total Petroleum Hydrocarbons as Gasoline
TPH-D = Total Petroleum Hydrocarbons as Diesel
B = Benzene
T = Toluene
E = Ethylbenzene
X = Xylenes
MTBE = Methyl tertiary butyl ether

<5.0 = Analyte not detected above the laboratory reporting limit
J = Analyte was detected at a concentration below the reporting limit
B = Anylate was present in associated method blank.

HAZARDOUS MATERIAL UNDERGROUND STORAGE
CLOSURE REPORT
CLOSURE PERMIT NUMBER 373090
FACILITY LOCATION: 5305 NORTH RIVERGRADE ROAD, IRWINDALE

This office has reviewed the closure report dated November 3, 2003, for the subject facility.

In order to better evaluate the report, the information indicated on the enclosed Additional Closure Requirements sheet must be submitted to this office by August 18, 2004.

If you have any questions regarding this matter, please contact Mr. Andrew Ngumba, of this office, at (626) 458-3513, Monday through Thursday, 7 a.m. to 5:30 p.m.

Very truly yours,

ADDITIONAL CLOSURE REQUIREMENTS

The additional information or requirements checked below must be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, CA 91802-1460, in order to complete evaluation of Closure Permit No. 373090.

[ ] Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.

[ ] Insufficient number of samples was obtained. Additional samples required in accordance with attached Closure Permit Requirements.

[ ] Describe method of obtaining, handling, and/or transporting samples.

[ ] Indicate time and date samples were obtained.

[X] Submit logs certified by a CA registered geologist, CA certified engineering geologist, or CA registered civil engineer with sufficient experience in soils for all borings.

[ ] Submit chain-of-custody documentation initiated by person obtaining sample through person at Department of Health Services certified laboratory.

[ ] Disposal destination of tanks and evidence of legal disposal.

[ ] Analysis results by a State certified laboratory shall be submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.

[ ] Documentation as to depth of groundwater at facility.

[ ] Manifests to document hazardous waste disposal of removed soil/tank rinsate with the signature of the disposal facility owner/operator.

[ ] Evidence of legal disposal of soils designated as non-hazardous.

[X] Signature on the report is required of CA registered geologist, CA certified engineering geologist, or CA registered civil engineer with sufficient experience in soils. The report must clearly indicate that all soil sampling was done under the supervision of the registered professional.

[X] Submit a work plan to define the lateral and vertical extent of contamination.

[X] Complete borings to groundwater or complete borings which penetrate to a minimum depth of 25 feet below the deepest detectable contamination. Borings shall be sampled and analyzed at five-foot intervals. EPA 5035 soil sampling guidelines must be utilized. All samples shall be analyzed for BTEX, MTBE, and oxygenate compounds using EPA 8260B, and for gasoline and diesel using EPA 8015(M). A voluntary cleanup oversight fee of $443 must be submitted for the review of future submittals regarding this site.

HAZARDOUS MATERIALS UNDERGROUND STORAGE TANKS
LANDOWNER NOTIFICATION AND PARTICIPATION REQUIREMENTS
FACILITY LOCATION: 5305 NORTH RIVERGRADE ROAD, IRWINDALE

This letter is to inform you of legislative requirements pertaining to cleanup and closure of sites where an unauthorized release of hazardous substance, including petroleum, has occurred from an underground storage tank (UST). Section 25297.15(a) of Chapter 6.7 of the Health and Safety Code requires the primary or active responsible party to notify all current record owners of fee title to the site of: 1) a site cleanup proposal, 2) a site closure proposal, 3) a local agency intention to make a determination that no further action is required, and 4) a local agency intention to issue a closure letter. Section 25297.15(b) requires the local agency to take all reasonable steps to accommodate responsible landowners' participation in the cleanup or site closure process and to consider their input and recommendations.

For purposes of implementing these sections, you have been identified as the primary or active responsible party. Please provide to this agency, within 20 calendar days of receipt of this notice, the assessor parcel number(s) for the site and a complete mailing list of all current record owners of fee title to the site. You may use the enclosed list of landowners form (sample letter 2) to comply with this requirement. If the list of current record owners of fee title to the site changes, you must notify the local agency of the change within 20 calendar days from when you are notified of the change.

If you are the sole landowner, please indicate that on the landowner list form. The following notice requirements do not apply to responsible parties who are the sole landowner for the site.

In accordance with Section 25297.15(a) of Chapter 6.7 of the Health and Safety Code, you must certify to the local agency that all current record owners of fee title to the site have been informed of the proposed action before the local agency may do any of the following:

1) Consider a cleanup proposal (corrective action plan)
2) Consider a site closure proposal
3) Make a determination that no further action is required
4) Issue a closure letter

You may use the enclosed notice of proposed action form (sample letter 3) to comply with this requirement. Before approving a cleanup proposal or site closure proposal, determining that no further action is required, or issuing a closure letter, the local agency will take all reasonable steps necessary to accommodate responsible landowner participation in the cleanup and site closure process and will consider all input and recommendations from any responsible landowner.

Please submit the certification within 20 days from the date of this letter. June 30 Th

Initial voluntary cleanup oversight fee of $443 must be paid prior to any report review. An additional fee of $147 per hour will be charged for each hour of assessment review which exceeds the initial three-hour review estimation.

Should you have any questions regarding this matter, please contact Mr. Andrew Ngumba, of this office, at (626) 458-3513, Monday through Thursday, 7 a.m. to 5:30 p.m.

Camarillo, CA 93012-8738

Subject: **Calscience Work Order No.:** **06-01-0760**
Client Reference: **Irwindale: 06489-085-003**

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 1/17/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of any subcontracted analysis is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Cecile deGuia

ACCREDITED IN ACCORDANCE WITH nelac

CASE NARRATIVE

Calscience Work Order No.: 06-01-0760
Client Reference: Irwindale: 06489-085-003

Due to the low surrogate recovery for TPH-G by EPA 5035 preparation method for sample SB-6-35, the sample was confirmed using the bulk sample by EPA 5030B preparation method. Both results were reported.

Calscience Environmental Laboratories, Inc.

Analytical Report

ACCREDITED IN ACCORDANCE WITH nelac

Glossary of Terms and Qualifiers

ACCREDITED IN ACCORDANCE WITH nelac

Work Order Number: 06-01-0760

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Subject: **Calscience Work Order No.:** **06-01-0799**
Client Reference: **Irwindale: 06489-085-003**

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 1/18/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of any subcontracted analysis is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Cecile L deGuia

Glossary of Terms and Qualifiers

Work Order Number: 06-01-0799

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Subject: Calscience Work Order No.: 06-01-0973
Client Reference: Irwindale: 06489-085-003

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 1/20/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of any subcontracted analysis is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Cecile de Guia

Glossary of Terms and Qualifiers

ACCREDITED IN ACCORDANCE WITH nelac

Work Order Number: 06-01-0973

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Non target Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Executive Summary

The former Hughes Family Markets distribution center and warehouse located at 5305 Rivergrade Road in the City of Irwindale, California, operated a gas station to serve the requirements of company vehicles. Hughes Family Markets was sold to the Ralph's Grocery chain and the assets of Hughes Family Markets integrated into the Ralph's system. The warehouse located at Rivergrade Road was surplus to Ralph's operations and was sold to The Realty Associates Fund V, L.P. (owners). The owners did not need an operational Gas station on their property for their current needs and to comply with State and County regulations a decision was made to remove the three Underground Storage Tanks (UST) and related piping and apply for regulatory closure.

Three 12,000-gallon USTs were removed from the 5305 Rivergrade location (Site) under a permit from the County of Los Angeles Department of Public Works, Environmental Programs Division (LADPW) on July 23, 2003. Two of the three USTs removed were used to store diesel fuel and one was used to store unleaded gasoline. The USTs were "double-walled Plasteel with appropriate alarms, spill containment, and overflow protection devises installed to ensure against spills and leaks from the operating systems. These USTs were reportedly installed in 1992 and were last used in 1997-1998.

All operations related to the removal of the USTs were conducted in the presence of the inspector from LADPW. The USTs were not damaged or otherwise compromised and there were no signs of leakage from the USTs. In addition the soil removed from the excavation did not show any discoloration or significant odor. Groundwater was not encountered in any of the excavations. Based on data from surrounding areas the depth to groundwater beneath the site is estimated to be approximately 200 feet below ground surface.

Per the requirements of the UST closure permit, soil samples were obtained from beneath the removed USTs, product piping, and fuel dispensers using an excavator and/or backhoe. Six samples and one duplicate sample were collected underneath the former USTs at a depth of 17 feet below ground surface (bgs). Ten samples and one duplicate sample were collected from beneath the former fuel dispensers at 4 feet bgs with the exception of the sample taken beneath the satellite fuel dispenser #1, which was taken at 3 feet bgs. Three samples were collected from selected locations beneath removed product piping at depths of 3 to 5½ feet bgs. In addition the soil removed from the UST excavation was staged on the surface. To check the quality of the excavated material two composite samples were taken from the excavated soil stockpile. All soil samples were analyzed for volatile organic compounds (VOCs) and were collected with Encore™ samplers in accordance with the current EPA method 5035 protocol required by the Regional Water Quality Control Board, Los Angeles Region (RWQCB).

The soil samples were analyzed in a fixed laboratory for total petroleum hydrocarbons as gasoline (TPHg) and diesel fuel (TPHd), by EPA Method 8015M, and for volatile fuel constituents benzene, toluene, ethylbenzene, total xylenes (BTEX) and fuel oxygenates Methyl tert-Butyl Ether (MTBE), Di-isopropyl Ether (DIPE), Ethyl tert-butyl Ether (ETBE), tert-Amyl Methyl Ether (TAME) and tert-Butanol (TBA) by EPA Method 8260B.

BTEX, DIPE, ETBE, TAME, and TBA, were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding one sample from dispenser 5 which contained 0.003 mg/kg of toluene. MTBE was detected in soil samples at concentrations ranging from 0.014 to 0.071 mg/kg at locations under dispenser 5 and the tank 1 excavation respectively. TPHg was detected in three soil samples at concentrations ranging from 1 mg/kg to 305 mg/kg. TPHd was detected in six soil samples at concentrations ranging from 10 mg/kg to 6,340 mg/kg.

Following a review of the laboratory data, it was decided to excavate the areas showing signs of petroleum hydrocarbon impacts to reduce the chances of soil remediation in the future. The next round of excavation for impacted soil was conducted on August 27, 2003 in the area of fuel dispensers 1 and 2, satellite fuel dispensers 2 and 3, and UST T2. The objective of this operation was to remove accessible soil affected with petroleum hydrocarbons prior to backfilling and repaving the former UST and fuel dispensing area. Soil was removed to a depth of several feet below the previous soil sampling locations. Specifically the soil beneath fuel dispensers 1 and 2 was removed to a depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 2 was removed to depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 3 was removed to a depth of approximately 8 feet bgs. Soil beneath removed UST T2 was removed to a depth of approximately 21 feet bgs. Following this round of excavation soil samples were taken from the bottom and sides of the excavation to verify soil conditions. All soil sampling were conducted per RWQCB protocols.

A review of laboratory analytical results for soil samples collected August 27, 2003 indicated further excavation was required in selected areas. This led to additional several feet of soil being removed from the areas of fuel dispenser 1 and fuel dispenser 2 on September 28, 2003. Additional soil was removed from the bottom of the excavation to a depth of approximately 11 feet bgs. Following this round of excavation soil samples were taken from the excavation areas to confirm that impacted soil was removed from the area. Five samples were collected in the vicinity of the former UST tank number 2. Sixteen samples were collected from beneath the former fuel dispensers at various depths. Three samples were taken from the excavated soil stockpile for disposal characterization.

Approximately 47 tons of petroleum hydrocarbon affected soil excavated from the areas of the UST T2 and fuel dispensers 1 and 2 and satellite fuel dispensers 2 and 3 was transported to Thermal Remediation Solutions in Azusa, California for disposal/recycling.

Confirmatory sampling provided the following results: BTEX and MTBE were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding one sample from beneath UST T2 which contained 0.021 mg/kg of MTBE. However, this sample was re-analyzed for MTBE by EPA method 8260B and the MTBE detection was not confirmed and therefore is not considered valid. TPHg was detected in one soil sample collected beneath fuel dispensers 1 and 2 at concentration of 2.3 mg/kg. TPHd was detected in soil samples at concentrations ranging from 11 mg/kg to 481 mg/kg. It should be noted that additional soil was excavated in the area of the 481 mg/kg detection, and a second confirmation sample collected from this location yielded a non-detect concentration of TPHd.

Confirmation samples collected from the excavations indicate the residual concentrations of TPHd remaining in soil do not exceed 15 mg/kg. Residual concentrations of toluene remaining in soil do not

exceed 0.003 mg/kg. Residual concentrations of MTBE remaining in soil do not exceed 0.071 mg/kg. During the field work it was decided that the residual concentrations were not high enough to warrant further excavation, especially when the excavation was caving in and undermining the concrete slab adjacent to the excavation.

The residual concentrations of toluene detected in soil are below USEPA Preliminary Remediation Goals (PRGs). There are no published PRGs for TPH. However, the residual concentrations of TPHd remaining in soil are several orders of magnitude below the Maximum Soil Screening Levels for Soils Above Drinking Water Aquifers provided in the *Interim Site Assessment and Cleanup Guidebook* (RWQCB, 1996). The published soil screening levels for TPH have since been rescinded but are still observed by multiple oversight agencies.

Because of its potential effects on groundwater quality, MTBE was further evaluated. The residual concentrations of MTBE detected in soil are below USEPA PRGs and above California Drinking Water Maximum Contaminant Levels (MCLs), *if these concentrations were found dissolved in water*. Based on field observations, the MTBE detections were rapidly decreasing with depth and the residual concentrations left is place are likely below detectable concentrations well before 50 feet bgs. If the distance to groundwater is greater than 150 feet from the last MTBE detection, an average attenuation factor (AF) of 19 can be used based on Site lithology of 50% sand and 50% gravel (RWQCB, 1996). A Site specific soil cleanup screening level can be calculated by multiplying the AF by the MCL (19 x 0.013 mg/L). The resulting soil cleanup screening level of 0.247 mg/L is applicable for soil from ground surface to 50 feet below ground surface and is an order of magnitude higher than the residual MTBE concentration detected in shallow soil onsite.

Based on this analysis the residual concentrations of TPHd, toluene, and MTBE are not human health or ecological risk, nor do they pose a threat to drinking water resources beneath the site. This report recommends that no further regulatory action be required in relation to the removed USTs and fuel dispensing systems on the Site.

1.0 INTRODUCTION

On July 23, 2003, URS Corporation (URS) removed three 12,000-gallon underground storage tanks (USTs) at the above-referenced property (Site). URS personnel conducted the UST removals in accordance with the guidelines and under regulatory oversight of the County of Los Angeles Department of Public Works, Environmental Programs Division (LADPW). A copy of the LADPW UST removal permit is provided in Appendix A. This report, prepared by URS on behalf of The Realty Associated Fund V, L.P., details the field activities and results of analytical data collected during the UST removal and subsequent soil excavation project.

The former Hughes Family Market distribution center and warehouse is located at 5305 Rivergrade Road in the City of Irwindale, California (Figure 1). The Site is bounded by the San Gabriel Riverbed to the northwest, by Rivergrade Road to the south and southeast, by Arrow Highway to the northeast, by the 605 Freeway to the west. The Santa Fe Flood Control Basin is located directly north of the Site.

Harding Lawson Associates (HLA) initially conducted a site reconnaissance as part of an Environmental Site Assessment (ESA) on November 19, 1999 (HLA, January 10, 2000). Site reconnaissance identified the presence of three 12,000-gallon fuel USTs. Two of the USTs were used to store diesel fuel and one was used to store unleaded gasoline. The USTs, dispensers, and associated piping were located to the southeast of the truck maintenance facility (Figure 2). The USTs were reported to be "double-walled Plasteel with appropriate alarms, spill containment, and overflow protection." Per the HLA ESA report, these USTs were installed in 1992 and were last used by Hughes Family Market in 1997 or 1998.

2.0 GEOLOGY AND HYDROGEOLOGY

The former Hughes Family Market distribution center and warehouse is located at 5305 Rivergrade Road in the City of Irwindale, California (Figure 1). The Site is bounded by the San Gabriel Riverbed to the northwest, by Rivergrade Road to the south and southeast, by Arrow Highway to the northeast, by the 605 Freeway to the west. The Santa Fe Flood Control Basin is located directly north of the Site.

The Site is located the northern half of the San Gabriel Valley approximately 3½ miles from the southern flank for the San Gabriel Mountains. Recent alluvium composed of unconsolidated deposits of gravel and sand occurs at ground surface in the area of the Site. Soil encountered in the UST excavations consisted of sands with gravel. Boring log data for the vicinity indicates that primarily gravel or gravel and sand are present to the total depths of 300 to 500 feet below ground surface (bgs) in the site vicinity. Alluvial deposits consisting primarily of gravel, sand, silt, and clay are estimated to extend to depths of 1,000 to 2,000 feet bgs in the Site vicinity. Idealized cross-sections indicate the middle and upper Miocene age Puente and Topanga Formations underlie the alluvial deposits to undetermined depths. The Topanga and Puente Formations are marine deposits consisting of interbedded siltstones, sandstones, conglomerates, and shale (State of California DWR, 1966).

Hydrogeologically, the Site located in the central area of the San Gabriel Valley groundwater basin. The basin is bounded on the north by the San Gabriel Mountains, on the east by uplifted subsurface bedrock between San Dimas and La Verne, on the southeast, south and west by the San Jose, Puente, Merced, and Repetto Hills, and on the northwest by the Raymond fault. The primary water bearing formations within the basin consist of unconsolidated and semi-consolidated Holocene and Pleistocene age sediments (State of California DWR, 1966).

Los Angeles County Well #4239H is located approximately 1700 feet southeast of the site (Figure 1). Depth to groundwater in the well was last measured May 1, 2003 at 214.2 feet bgs (LADPW, September 2003). Based on this data, the depth to groundwater beneath the Site is estimated to be approximately 200 feet bgs. Based on the regional topography the direction of groundwater flow in the Site vicinity is estimated to be south-southwest.

3.0 SCOPE OF WORK

The project was managed and field activities were supervised by URS personnel under the direction of a California Registered Geologist. The UST excavation and removal services were performed by URS subcontractor, Innovative Construction Solution (ICS), Inc., a state-licensed contractor with hazardous substance removal certification (License No. 764815). Nieto and Sons Trucking, Inc. was subcontracted by ICS to render the USTs inert, cut openings, pressure wash and triple rinse the interior of the USTs, and lift the USTs out of the excavation onto a flatbed truck for transportation and disposal. Methods utilized to excavate, remove, and dispose of the USTs are provided in the following sections.

3.1 HEALTH AND SAFETY PLAN

Prior to initiating the field activities, a site-specific health and safety plan was prepared that:

- Identified and described potentially hazardous substances that could have been encountered during field operations.
- Specified protective equipment and clothing for onsite activities.
- Outlined measures to be implemented in the event of an emergency.

Field personnel were required to review the health and safety plan prior to commencing with field activities. In addition, health and safety briefings were conducted during the course of field activities. A copy of the health and safety plan was kept onsite during field activities and is archived in the project files.

3.2 UTILITY CLEARANCE

In accordance with California Assembly Bill AB 73, Underground Services Alert (USA) was notified of our intent to conduct subsurface excavation at least 48 hours prior to initiation of intrusive field tasks. The proposed location of subsurface excavation was clearly marked with white paint as required by California Code 4216. USA contacted utility owners of record within the vicinity and notified them of our intention to conduct subsurface excavation in proximity to buried utilities. The utility owners of record, or their designated agents, clearly marked the position of their utilities on the ground surface throughout the area designated for excavation.

3.3 SITE SECURITY

The USTs were located on the southeast side of the truck maintenance facility (Figure 2). The Site has restricted access and is secured with fences, gates, and walls in excess of six feet tall and is not accessible to the public. Therefore, barricades and caution tape were used to delineate work zones, soil stockpiles, and open excavations within the secured loading dock area.

3.4 AIR MONITORING

Soil excavation during the UST removal was monitored in accordance with a South Coast Air Quality Management District (SCAQMD) Mitigation Plan (No. 406479) for excavation and handling VOC-impacted soils. Advance notifications were made to the SCAQMD by URS prior to startup. Soil monitoring records were maintained in accordance with AQMD Rule 1166. A copy of the SCAQMD Mitigation Plan and Rule 1166 Soil Monitoring Records are included as Appendix B. Continuous air monitoring was also conducted for worker safety.

3.5 UST EXCAVATION AND REMOVAL

Concrete overlying the UST was saw cut and removed during July 22, 2003. The removed concrete and asphalt was stockpiled onsite and subsequently disposed of as construction waste. Following concrete and asphalt removal, soil overlying the USTs was excavated using an excavator (Photographs 1 and 2). Soil excavation was conducted in accordance with SCAQMD Rule 1166 requirements (Appendix B). Excavated soil was placed on 6-millimeter polyethylene sheeting and were located a minimum distance of 4 feet from the edge of the excavation.

After the USTs were exposed and degassed, openings were cut on the tops of the USTs, and the interior of the USTs were pressure-washed and triple-rinsed (Photographs 3, 4, and 5). Following pressure washing, the USTs were inspected and determined to be non-hazardous for transportation and disposal by a certified marine chemist. A copy of the marine chemist certification is provided as Appendix C. A crane was used to lift the USTs out of the excavation, where they were cleaned of excess soil, and loaded onto a flatbed truck for transport to, and disposal at, Ecology Auto Parts in Santa Fe Springs, CA (Photographs 6 through 9). A copy of the certificate of destruction for the USTs is provided in Appendix D. The USTs appeared to be in good condition with no visible holes observed in the USTs during excavation and removal.

3.5.1 Piping and Dispenser Removal

The product and vent piping associated with the USTs were excavated with a backhoe, rinsed, and removed (Photographs 10, 11, and 12). The piping appeared to be in good condition with no visible holes observed in the piping. The removed piping was disposed with the USTs. Fuel dispensers were also removed from the site (Photograph 13).

3.5.2 Sampling Program

Soil samples were obtained from beneath the removed USTs, product piping, and fuel dispensers using an excavator or backhoe. Soil samples were collected from soil within the center of the excavator or backhoe bucket. Sampling equipment was cleaned using a dilute Alconox solution followed by rinsing with fresh water, final rinsing with distilled water, and air-drying. Soil samples analyzed for volatile organic compounds (VOCs) were collected using Encore™ samplers the current EPA method 5035 protocol required by the Regional Water Quality Control Board, Los Angeles Region (RWQCB).

Soil samples were properly sealed, labeled, and recorded on a chain of custody document (Appendix E). The sample labels affixed to the samples included the following information; sample designation, sample

number, sample depth, date, collector initials, site/client name, and time of collection. The sealed and labeled samples were placed in an ice chest maintained at a temperature of three to seven degrees centigrade and transported, under chain of custody, to Southland Technical Services, Inc. (STS) in Montebello California. STS is a California Department of Health Services accredited laboratory (Cert. No. 1986).

Soil samples were collected from beneath the removed USTs, product piping, and fuel dispensers during July 23, 2003. Six samples and one duplicate sample were collected underneath the former UST tanks at 17 feet bgs. Ten samples and one duplicate sample were collected from beneath the former fuel dispensers at 4 feet bgs with the exception of the sample taken beneath the satellite fuel dispenser #1, which was taken at 3 feet bgs. Three samples were collected from selected locations beneath removed product piping at depths of 3 to 5½ feet bgs. Two composite samples were taken from the excavated soil stockpile. The soil sample locations are shown on Figure 3.

3.5.3 Laboratory Analysis

The soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) and diesel fuel (TPHd), by EPA Method 8015M. The soil samples were also analyzed for volatile fuel constituents benzene, toluene, ethylbenzene, total xylenes (BTEX) and fuel oxygenates Methyl tert-Butyl Ether (MTBE), Di-isopropyl Ether (DIPE), Ethyl tert-butyl Ether (ETBE), tert-Amyl Methyl Ether (TAME) and tert-Butanol (TBA) by EPA Method 8260B.

A summary of soil analytical results is included as Table 1. Laboratory reports and chain-of-custody documentation are included as Appendix E. BTEX, DIPE, ETBE, TAME, and TBA, were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding FD5-4-030723 which contained 0.003 mg/kg of toluene. MTBE was detected in soil samples at concentrations ranging from 0.014 to 0.071 mg/kg at locations FD5-4-030723 and T1A-17-030723, respectively. TPHg was detected in three soil samples at concentrations ranging from 135 mg/kg to 305 mg/kg. TPHd was detected in six soil samples at concentrations ranging from 10 mg/kg to 6,340 mg/kg.

URS conducted a check of data completeness for the analytical laboratory reports. Results indicate "these data are usable, as qualified, for their intended purpose". A copy of URS's Data Validation Memo is included in Appendix F.

3.6 Excavation Of Soil

Additional soil excavation was conducted September 27, 2003 in the area of fuel dispensers 1 and 2, satellite fuel dispensers 2 and 3, and UST T2 (Figure 2) to remove accessible soil affected with petroleum hydrocarbons prior to backfilling and repaving. Soil was removed to a depth of several feet below the previous soil sampling locations. Soil beneath fuel dispensers 1 and 2 was removed to a depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 2 was removed to depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 3 was removed to a depth of approximately 8 feet bgs. Soil beneath removed UST T2 was removed to a depth of approximately 21 feet bgs. The areas of additional excavation are shown on Figure 4.

Following review of laboratory analytical results for soil samples collected September 27, 2003, An additional several feet of soil was removed from the areas of fuel dispenser 1 and 2 on September 28, 2003. Additional soil was removed from the bottom of the excavation to a depth of approximately 11 feet bgs.

Excavated soil was placed on, and covered with 6-millimeter polyethylene sheeting and located a minimum distance of 4 feet from the edge of the excavations. The soil was subsequently transported offsite to an appropriate disposal/recycling facility.

3.6.1 Confirmation Sampling Program

Soil samples were collected from the excavation during August 27 and 28, 2003. Five samples were collected in the vicinity of the former UST tank number 2. Sixteen samples were collected from beneath the former fuel dispensers at various depths. Three composite samples were taken from the excavated soil stockpile for disposal characterization. The soil sample locations for the fuel dispenser and UST excavations are shown on Figure 4.

Soil samples were collected from the sidewalls and bottoms of the excavations using an excavator or backhoe. Soil samples were collected from soil within the center of the excavator or backhoe bucket. Sampling equipment was cleaned using a dilute Alconox solution followed by rinsing with fresh water, final rinsing with distilled water, and air-drying. Soil samples analyzed for VOCs were collected using Encore™ samplers the current EPA method 5035 protocol required by the RWQCB.

Soil samples were properly sealed, labeled, and recorded on a chain of custody document as described in Section 3.5.2. The sealed and labeled samples were placed in an ice chest maintained at a temperature of three to seven degrees centigrade and transported, under chain of custody, to STS laboratories.

3.6.2 Laboratory Analysis

The soil samples were analyzed for TPHg and TPHd, by EPA Method 8015M. The soil samples were also analyzed for BTEX and MTBE by EPA Method 8021. MTBE detections were confirmed by EPA Method 8260B.

A summary of soil analytical results for the confirmation samples is provided as Table 2. Laboratory reports and chain-of-custody documentation are included as Appendix E. BTEX and MTBE were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding T2A-21E-030827 which contained 0.021 mg/kg of MTBE. However, this sample was re-analyzed for MTBE by EPA method 8260B and the MTBE detection was not confirmed and therefore is not considered valid. TPHg was detected in soil sample collected at FD1/2-9.5B-030827 at concentration of 2.3 mg/kg. TPHd was detected in soil samples at concentrations ranging from 11 mg/kg to 481 mg/kg. It should be noted that additional soil was excavated in the area of the 481 mg/kg detection.

Laboratory reports and chain-of-custody documentation are included as Appendix E. URS conducted a check of data completeness for the analytical laboratory reports. Results indicate "these data are usable,

as qualified, for their intended purpose". A copy of URS's Data Validation Memo is included in Appendix F.

3.7 WASTE MANAGEMENT

The USTs, rinseate fluids, and excavated soils were disposed of at appropriate facilities as determined from field observations and waste profiling. Nieto and Sons Trucking, Inc. recovered approximately 750 gallons of water from the UST during the pressure wash and triple rinse. The rinseate water from the USTs and product piping was transported by Nieto and Sons Trucking, Inc. to DeMenno Kerdooon in Compton, California for disposal. A copy of the uniform hazardous waste manifest for the disposal of the rinseate water is provided as Appendix G.

Approximately 46 tons of petroleum hydrocarbon affected soil excavated from the areas of the UST T2 and fuel dispensers 1 and 2 and satellite fuel dispensers 2 and 3 was transported to Thermal Remediation Solutions in Azusa, California for disposal/recycling. The disposal/recycling certificate for the soil is provided as Appendix H.

3.8 BACKFILL AND RESURFACING

The UST and piping excavations were backfilled with stock piled soil from the UST excavation and clean, imported fill. The backfilled soil was compacted to 90% of relative maximum density. The soil compaction data is provided in Appendix I. The excavations were resurfaced with 6-inches of steel reinforced concrete (Photograph 14, 15, and 16).

4.0 DISCUSSION

Three 12,000 gallon USTs historically used to store diesel fuel and unleaded gasoline were removed from the Site July 22, 2003. Analyses results for soil samples collected during the UST removals identified areas beneath UST T2, fuel dispensers 1 and 2, and satellite fuel dispensers 2 and 3 with elevated concentrations of petroleum hydrocarbons. Additional soils were excavated from these areas on September 27 and 28, 2003.

Confirmation samples collected from the excavations indicate the residual concentrations of TPHd remaining in soil do not exceed 15 mg/kg. Residual concentrations of toluene remaining in soil do not exceed 0.003 mg/kg. Residual concentrations of MTBE remaining in soil do not exceed 0.071 mg/kg.

A variety of federal regulations that protect public health and the environment in California are directed by the United States Environmental Protection Agency (USEPA), Region 9. State of California regulations are directed by agencies such as the Department of Health Services (DHS), Department of Toxic Substances Control (DTSC), and the State Water Resources Control Board (SWRCB). USEPA Region 9 has established Preliminary Remediation Goals (PRGs) as tools for evaluating and cleaning up contaminated sites. Furthermore, California state agencies have developed additional cleanup guidance for contaminated soils and groundwater based on human health and ecological risk exposure. Various California cleanup guidance criteria for sites with soil and groundwater contamination typically factor in maximum contaminant levels (MCLs) for drinking water. General guidance criteria such as the USEPA Region 9 PRGs and California drinking water MCLs can be used as a benchmark for evaluating cleanup criteria for a site such as this.

The remaining BTEX and MTBE concentrations detected in soil beneath the former UST and fuel dispensing area of the site and the corresponding regulatory guidance criteria are listed below.

Petroleum Hydrocarbon Constituents Of Concern	Highest Detected Concentration in Soil (mg/kg)	USEPA Region 9 PRGs for Soil				California Drinking Water MCLs (mg/L)
		Health Risk		Protection of Groundwater		
		Res. (mg/kg)	Ind. (mg/kg)	DAF1 (mg/kg)	DAF20 (mg/kg)	
Benzene	<0.005	0.6	1.3	0.002	0.03	0.001
Toluene	0.003	520	520	0.6	12	0.15
Ethylbenzene	<0.005	8.9	20	0.7	13	0.7
Xylenes	<0.010	210	210	10	210	1.75
MTBE	0.071	17	36	--	--	0.013

-- = Not Available

The residual concentrations of toluene detected in soil are below USEPA PRGs and California Drinking Water MCLs. There are no published PRGs or Drinking Water MCLs for TPH. However, the residual concentrations of TPHd remaining in soil are several orders of magnitude below the Maximum Soil Screening Levels for Soils Above Drinking Water Aquifers provided in the *Interim Site Assessment and*

Cleanup Guidebook (RWQCB, 1996). The published soil screening levels for TPH have since been rescinded but are still observed by multiple oversight agencies.

The residual concentrations of MTBE detected in soil are below USEPA PRGs and above drinking water MCLs. Assuming the MTBE detections decrease to below detectable concentrations before 50 feet bgs, and the distance to groundwater is greater than 150 feet from the last MTBE detection, an average attenuation factor (AF) of 19 can be used based on Site lithology of 50% sand and 50% gravel (RWQCB, 1996). A Site specific soil cleanup screening level can be calculated by multiplying the AF by the MCL (19 x 0.013 mg/L). The resulting soil cleanup screening level of 0.247 mg/L is an order of magnitude higher than the residual MTBE concentration detected in soil onsite.

Based on this analysis the residual concentrations of TPHd, toluene, and MTBE are not human health or ecological risk, nor do they pose a threat to drinking water resources beneath the Site. URS recommends that no further regulatory action be required in relation to the removed USTs and fuel dispensing systems on the Site.

5.0 LIMITATIONS

The conclusions presented in this report are professional opinions based solely upon the data described in this report. They are intended exclusively for the purpose outlined herein and the Site location and project indicated. This report was prepared for the sole use and benefit of The Realty Associated Fund, V L.P. The scope of services performed in execution of this project may not be appropriate to satisfy the needs of other users, and any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

Opinions relating to environmental, geologic, and geotechnical conditions are based on limited data and actual conditions may vary from those encountered at the times and locations where data were obtained. No express or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed by The Realty Associated Fund V, L.P. with the customary thoroughness and competence of professionals working in the same area on similar projects.

VARIOUS LOCATIONS
RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your application (A/N 406479)-for the excavation and handling of VOC-contaminated soil at **various locations** within the South Coast Air Quality Management District.

In accordance with Rule 1166 (c), this approved plan is required prior to commencing excavation of any underground storage tank or transfer piping which has previously been used to store or transfer volatile organic compounds (VOC) or during the excavation, handling, or storage of VOC-contaminated soils.

The rights and privileges granted through the issuance of this plan are restricted exclusively to the plan holder to whom it was issued, and are non-transferable, even with the written or expressed consent of the plan holder listed above.

A VARIOUS LOCATIONS PLAN can be used at a site to excavate and remove a maximum of 2000 cubic yards of VOC contaminated soil at the site. Any treatment or additional excavation of VOC contaminated soil at the site will require the issuance of a SITE SPECIFIC plan by the AQMD. Multiple use of VARIOUS LOCATIONS PLANS to excavate over 2000 cubic yards of contaminated soil for the same site is prohibited per Rule 1166.

This excavation and mitigation plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the AQMD and is subject to the following conditions.

THIS PLAN WILL EXPIRE ONE YEAR FROM THE ISSUE DATE.

IF YOU WISH TO MAINTAIN A CURRENT PLAN AFTER THAT DATE, FILE AN APPLICATION FOR A NEW PLAN AT LEAST TWO MONTHS PRIOR TO THE EXPIRATION DATE OF THE CURRENT PLAN.

PLAN CONDITIONS

SECTION I – GENERAL REQUIREMENTS

1. A SIGNED COPY OF THIS PLAN SHALL BE PRESENT AT EACH EXCAVATION SITE AT ALL TIMES AND SHALL BE MADE AVAILABLE TO AQMD PERSONNEL UPON REQUEST.

In the event of any physical or atmospheric adversely affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces, or if any doubt, immediately stop all work and contact the undersigned Marine Chemist.

QUALIFICATIONS: Transfer of ballast of manipulation of valves or closure equipment tending to alter conditions in pipe lines, tanks or compartments subject to gas accumulation, unless specifically approved in this Certificate, requires inspection and endorsement or reissue of Certificate for the spaces so affected. All lines, vents, heating coils, valves, and similarly enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated.

STANDARD SAFETY DESIGNATIONS (partial list, paraphrased from NFPA 306 Subsections 2-3.1 through 2-3.5, and Subsection 6-3.2)

SAFE FOR WORKERS: Means that in the compartment of space so designated: (a) the oxygen content of the atmosphere is at least 19.5 percent by volume; and that, (b) toxic materials in the atmosphere are within permissible concentrations; and that, (c) the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Marine Chemist's Certificate.

NOT SAFE FOR WORKERS: Means that in the compartment of space so designated, the requirements of Safe for Workers have not been met.

ENTER WITH RESTRICTIONS: Means that in any compartment or space so designated, entry for work may be made only if conditions of proper protective equipment, clothing, and time are specified.

SAFE FOR HOT WORK: Means that in any compartment designated: (a) oxygen content of the atmosphere is at least 19.5 percent by volume, with the exception of inerted spaces or where external hot work is to be performed; and that, (b) the concentration of flammable materials in the atmosphere is below 10 percent of the lower flammable limit; and that, (c) the residues are not capable of producing a higher concentration than permitted by (b) above under existing atmospheric conditions in the presence of fire, and while maintained as directed on the Marine Chemist's Certificate; and further, that, (d) all adjacent spaces containing or having contained flammable or combustible materials have been cleaned sufficiently to prevent the spread of fire, or are satisfactorily inerted, or, in the case of fuel tanks or lube oil tanks, or engine room or fire room bilges, have been treated in accordance with the Marine Chemist's requirements.

NOT SAFE FOR HOT WORK: Means that in the compartment so designated, the requirements of Safe for Hot Work have not been met.

CHEMIST'S ENDORSEMENT. This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

The undersigned acknowledges receipt of this Certificate under Section 2-6 of NFPA 306 and understands conditions and limitations under which it was issued.

-07-03

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

LABORATORY REPORTS AND CHAIN OF CUSTODY DOCUMENTS FOR SOIL SAMPLES

Southland Technical Services, Inc.
Environmental Laboratories

07-28-2003

Mr. Scott Rowlands
URS Corporation
2020 E. First Street, Suite 400
Santa Ana, CA 92705

Project: 29868258
Project Site: Irwindale
SSample Date: 07-23-2003
Lab Job No.: UR307147

Dear Mr. Rowlands:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 07-24-2003 and analyzed by the following EPA methods:

EPA 8015M (Diesel)
EPA 8015M (Gasoline)
EPA 8260B (BTEX & Oxygenates by GC/MS)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us the opportunity to serve you. Please feel free to call me at (323) 888-0728 if our laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph. D.
Laboratory Director

Southland Technical Services, Inc.
Environmental Laboratories

08-28-2003

Mr. Joe Liles
URS Corporation
2020 E. First Street, Suit 400
Santa Ana, CA 92705

Project: TA Realty (Former Hughes Facility)
Project Site: Irwindale
SSample Date: 08-27-2003
Lab Job No.: UR308148

Dear Mr. Liles:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 08-27-2003 and analyzed by the following EPA methods:

EPA 8021B (BTEX,MTBE)
EPA 8015M (Gasoline)
EPA 8015M (Diesel)
EPA 8260B (GC/MS Confirmation of MTBE)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us the opportunity to serve you. Please feel free to call me at (323) 888-0728 if our laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph. D.
Laboratory Director

Enclosures

This cover letter is an integral part of this analytical report.

Date Sampled: 7/23/03
TPH-Gasoline= Total petroleum hydrocarbon – gasoline range (C_4-C_{12}), TPH-Diesel= Total petroleum hydrocarbon – diesel range (C_{13}-C_{23})
Fuel Oxygenates = t-butyl alcohol (TBA), t-amyl methyl ether (TAME), di - isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), Methyl t-butyl ether (MTBE), BTEX = Benzene, Toluene, Ethylbenzene, and Xylenes.
STS is certified by California Department of Health Services, Environmental Laboratory Accreditation Program, ELAP Certificate Number 1986

Chain-of-custody (COC)	✓	✓	✓
Sample Receipt	✓	✓	✓
Holding Times	✓	✓	✓
Method Blank	✓	✓	✓
Surrogate Recovery	✓	(2)	✓
Laboratory Control Sample	✓	✓	✓
Matrix Spike	✓(1)	✓(3)	✓(4)
Duplicate or Spike Duplicate	✓(1)	✓(3)	✓(4)
Field Duplicate	✓	✓	✓
Trip Blank	NA	NA	NA

✓ = Quality control evaluation criteria met. NA = Not Applicable or Not Analyzed

Notes:

1. MS/MSD was conducted on sample FD3-4-030723. The results were within acceptance criterion.
2. Surrogate recovery was outside of acceptance limits for TPH-diesel analysis for three samples (FD1-4-030723, FD2-4-030723, SFD2-4-030723). Consequently for these samples the TPH-diesel results were qualified as estimated (J) to reflect the potential of high bias.
3. MS/MSD was conducted on sample T1A-17-030723. The results were within acceptance criterion.
4. MS/MSD was conducted on sample T1B-17-030723. The results were within acceptance criterion.

Summary: Based on this Level III validation covering the QC parameters listed in the table above, these data are considered to be useable for meeting project objectives. However, the data user must evaluate the ultimate usability of the data based on the reporting limits obtained. The table below lists the detection limits obtained for undiluted samples.

Analyte	Detection Limits Obtained
TPH-Diesel	10
TPH-Gasoline	1
Benzene, Toluene, Ethyl Benzene	0.002
Total Xylenes	0.004
MTBE	0.005
TBA	0.02
Other Oxygenates	0.005

Soil units are milligrams per kilogram (mg /kg).

Four samples (T1A-17-030723, FD1-4-030723, FD2-4-030723, SFD2-4-030723) required dilution for the EPA 8260B analysis. For these samples, there are also non-detect BTEX and fuel oxygenates results with elevated reporting limits. The data user must evaluate the utility of non-detect BTEX, and fuel oxygenates results with elevated reporting limits.

SUBJECT: COMPACTION TESTING

REPORT OF TESTS

In compliance with your request, Smith-Emery Laboratories has conducted standard compaction testing for the above refcrenced project.

Field density tests to determine relative compaction were conducted in accordance with ASTM D2922-91, nuclear method.

Test locations and results are presented on the attached Table 1. Laboratory compaction characteristics of soil tests were performed on representative samples in accordance with, ASTM D2922-91, five layer method. Test results are presented on the attached Table 2.

Respectfully submitted,

SMITH-EMERY LABORATORIES

Danny Randall
Operations Manager

NOTE: This report contains a weekly summary of compaction test results **only** and it should **not** be submitted to City or County grading departments as a certified compaction earth fill report.

Executive Summary

The former Hughes Family Markets distribution center and warehouse located at 5305 Rivergrade Road in the City of Irwindale, California, operated a gas station to serve the requirements of company vehicles. Hughes Family Markets was sold to the Ralph's Grocery chain and the assets of Hughes Family Markets integrated into the Ralph's system. The warehouse located at Rivergrade Road was surplus to Ralph's operations and was sold to The Realty Associates Fund V, L.P. (owners). The owners did not need an operational Gas station on their property for their current needs and to comply with State and County regulations a decision was made to remove the three Underground Storage Tanks (UST) and related piping and apply for regulatory closure.

Three 12,000-gallon USTs were removed from the 5305 Rivergrade location (Site) under a permit from the County of Los Angeles Department of Public Works, Environmental Programs Division (LADPW) on July 23, 2003. Two of the three USTs removed were used to store diesel fuel and one was used to store unleaded gasoline. The USTs were "double-walled Plasteel with appropriate alarms, spill containment, and overflow protection devises installed to ensure against spills and leaks from the operating systems. These USTs were reportedly installed in 1992 and were last used in 1997-1998.

All operations related to the removal of the USTs were conducted in the presence of the inspector from LADPW. The USTs were not damaged or otherwise compromised and there were no signs of leakage from the USTs. In addition the soil removed from the excavation did not show any discoloration or significant odor. Groundwater was not encountered in any of the excavations. Based on data from surrounding areas the depth to groundwater beneath the site is estimated to be approximately 200 feet below ground surface.

Per the requirements of the UST closure permit, soil samples were obtained from beneath the removed USTs, product piping, and fuel dispensers using an excavator and/or backhoe. Six samples and one duplicate sample were collected underneath the former USTs at a depth of 17 feet below ground surface (bgs). Ten samples and one duplicate sample were collected from beneath the former fuel dispensers at 4 feet bgs with the exception of the sample taken beneath the satellite fuel dispenser #1, which was taken at 3 feet bgs. Three samples were collected from selected locations beneath removed product piping at depths of 3 to 5½ feet bgs. In addition the soil removed from the UST excavation was staged on the surface. To check the quality of the excavated material two composite samples were taken from the excavated soil stockpile. All soil samples were analyzed for volatile organic compounds (VOCs) and were collected with Encore™ samplers in accordance with the current EPA method 5035 protocol required by the Regional Water Quality Control Board, Los Angeles Region (RWQCB).

The soil samples were analyzed in a fixed laboratory for total petroleum hydrocarbons as gasoline (TPHg) and diesel fuel (TPHd), by EPA Method 8015M, and for volatile fuel constituents benzene, toluene, ethylbenzene, total xylenes (BTEX) and fuel oxygenates Methyl tert-Butyl Ether (MTBE), Di-isopropyl Ether (DIPE), Ethyl tert-butyl Ether (ETBE), tert-Amyl Methyl Ether (TAME) and tert-Butanol (TBA) by EPA Method 8260B.

BTEX, DIPE, ETBE, TAME, and TBA, were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding one sample from dispenser 5 which contained 0.003 mg/kg of toluene. MTBE was detected in soil samples at concentrations ranging from 0.014 to 0.071 mg/kg at locations under dispenser 5 and the tank 1 excavation respectively. TPHg was detected in three soil samples at concentrations ranging from 1 mg/kg to 305 mg/kg. TPHd was detected in six soil samples at concentrations ranging from 10 mg/kg to 6,340 mg/kg.

Following a review of the laboratory data, it was decided to excavate the areas showing signs of petroleum hydrocarbon impacts to reduce the chances of soil remediation in the future. The next round of excavation for impacted soil was conducted on August 27, 2003 in the area of fuel dispensers 1 and 2, satellite fuel dispensers 2 and 3, and UST T2. The objective of this operation was to remove accessible soil affected with petroleum hydrocarbons prior to backfilling and repaving the former UST and fuel dispensing area. Soil was removed to a depth of several feet below the previous soil sampling locations. Specifically the soil beneath fuel dispensers 1 and 2 was removed to a depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 2 was removed to depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 3 was removed to a depth of approximately 8 feet bgs. Soil beneath removed UST T2 was removed to a depth of approximately 21 feet bgs. Following this round of excavation soil samples were taken from the bottom and sides of the excavation to verify soil conditions. All soil sampling were conducted per RWQCB protocols.

A review of laboratory analytical results for soil samples collected August 27, 2003 indicated further excavation was required in selected areas. This led to additional several feet of soil being removed from the areas of fuel dispenser 1 and fuel dispenser 2 on September 28, 2003. Additional soil was removed from the bottom of the excavation to a depth of approximately 11 feet bgs. Following this round of excavation soil samples were taken from the excavation areas to confirm that impacted soil was removed from the area. Five samples were collected in the vicinity of the former UST tank number 2. Sixteen samples were collected from beneath the former fuel dispensers at various depths. Three samples were taken from the excavated soil stockpile for disposal characterization.

Approximately 47 tons of petroleum hydrocarbon affected soil excavated from the areas of the UST T2 and fuel dispensers 1 and 2 and satellite fuel dispensers 2 and 3 was transported to Thermal Remediation Solutions in Azusa, California for disposal/recycling.

Confirmatory sampling provided the following results: BTEX and MTBE were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding one sample from beneath UST T2 which contained 0.021 mg/kg of MTBE. However, this sample was re-analyzed for MTBE by EPA method 8260B and the MTBE detection was not confirmed and therefore is not considered valid. TPHg was detected in one soil sample collected beneath fuel dispensers 1 and 2 at concentration of 2.3 mg/kg. TPHd was detected in soil samples at concentrations ranging from 11 mg/kg to 481 mg/kg. It should be noted that additional soil was excavated in the area of the 481 mg/kg detection, and a second confirmation sample collected from this location yielded a non-detect concentration of TPHd.

Confirmation samples collected from the excavations indicate the residual concentrations of TPHd remaining in soil do not exceed 15 mg/kg. Residual concentrations of toluene remaining in soil do not

exceed 0.003 mg/kg. Residual concentrations of MTBE remaining in soil do not exceed 0.071 mg/kg. During the field work it was decided that the residual concentrations were not high enough to warrant further excavation, especially when the excavation was caving in and undermining the concrete slab adjacent to the excavation.

The residual concentrations of toluene detected in soil are below USEPA Preliminary Remediation Goals (PRGs). There are no published PRGs for TPH. However, the residual concentrations of TPHd remaining in soil are several orders of magnitude below the Maximum Soil Screening Levels for Soils Above Drinking Water Aquifers provided in the *Interim Site Assessment and Cleanup Guidebook* (RWQCB, 1996). The published soil screening levels for TPH have since been rescinded but are still observed by multiple oversight agencies.

Because of its potential effects on groundwater quality, MTBE was further evaluated. The residual concentrations of MTBE detected in soil are below USEPA PRGs and above California Drinking Water Maximum Contaminant Levels (MCLs), *if these concentrations were found dissolved in water*. Based on field observations, the MTBE detections were rapidly decreasing with depth and the residual concentrations left is place are likely below detectable concentrations well before 50 feet bgs. If the distance to groundwater is greater than 150 feet from the last MTBE detection, an average attenuation factor (AF) of 19 can be used based on Site lithology of 50% sand and 50% gravel (RWQCB, 1996). A Site specific soil cleanup screening level can be calculated by multiplying the AF by the MCL (19 x 0.013 mg/L). The resulting soil cleanup screening level of 0.247 mg/L is applicable for soil from ground surface to 50 feet below ground surface and is an order of magnitude higher than the residual MTBE concentration detected in shallow soil onsite.

Based on this analysis the residual concentrations of TPHd, toluene, and MTBE are not human health or ecological risk, nor do they pose a threat to drinking water resources beneath the site. This report recommends that no further regulatory action be required in relation to the removed USTs and fuel dispensing systems on the Site.

1.0 INTRODUCTION

On July 23, 2003, URS Corporation (URS) removed three 12,000-gallon underground storage tanks (USTs) at the above-referenced property (Site). URS personnel conducted the UST removals in accordance with the guidelines and under regulatory oversight of the County of Los Angeles Department of Public Works, Environmental Programs Division (LADPW). A copy of the LADPW UST removal permit is provided in Appendix A. This report, prepared by URS on behalf of The Realty Associated Fund V, L.P., details the field activities and results of analytical data collected during the UST removal and subsequent soil excavation project.

The former Hughes Family Market distribution center and warehouse is located at 5305 Rivergrade Road in the City of Irwindale, California (Figure 1). The Site is bounded by the San Gabriel Riverbed to the northwest, by Rivergrade Road to the south and southeast, by Arrow Highway to the northeast, by the 605 Freeway to the west. The Santa Fe Flood Control Basin is located directly north of the Site.

Harding Lawson Associates (HLA) initially conducted a site reconnaissance as part of an Environmental Site Assessment (ESA) on November 19, 1999 (HLA, January 10, 2000). Site reconnaissance identified the presence of three 12,000-gallon fuel USTs. Two of the USTs were used to store diesel fuel and one was used to store unleaded gasoline. The USTs, dispensers, and associated piping were located to the southeast of the truck maintenance facility (Figure 2). The USTs were reported to be "double-walled Plasteel with appropriate alarms, spill containment, and overflow protection." Per the HLA ESA report, these USTs were installed in 1992 and were last used by Hughes Family Market in 1997 or 1998.

2.0 GEOLOGY AND HYDROGEOLOGY

The former Hughes Family Market distribution center and warehouse is located at 5305 Rivergrade Road in the City of Irwindale, California (Figure 1). The Site is bounded by the San Gabriel Riverbed to the northwest, by Rivergrade Road to the south and southeast, by Arrow Highway to the northeast, by the 605 Freeway to the west. The Santa Fe Flood Control Basin is located directly north of the Site.

The Site is located the northern half of the San Gabriel Valley approximately 3½ miles from the southern flank for the San Gabriel Mountains. Recent alluvium composed of unconsolidated deposits of gravel and sand occurs at ground surface in the area of the Site. Soil encountered in the UST excavations consisted of sands with gravel. Boring log data for the vicinity indicates that primarily gravel or gravel and sand are present to the total depths of 300 to 500 feet below ground surface (bgs) in the site vicinity. Alluvial deposits consisting primarily of gravel, sand, silt, and clay are estimated to extend to depths of 1,000 to 2,000 feet bgs in the Site vicinity. Idealized cross-sections indicate the middle and upper Miocene age Puente and Topanga Formations underlie the alluvial deposits to undetermined depths. The Topanga and Puente Formations are marine deposits consisting of interbedded siltstones, sandstones, conglomerates, and shale (State of California DWR, 1966).

Hydrogeologically, the Site located in the central area of the San Gabriel Valley groundwater basin. The basin is bounded on the north by the San Gabriel Mountains, on the east by uplifted subsurface bedrock between San Dimas and La Verne, on the southeast, south and west by the San Jose, Puente, Merced, and Repetto Hills, and on the northwest by the Raymond fault. The primary water bearing formations within the basin consist of unconsolidated and semi-consolidated Holocene and Pleistocene age sediments (State of California DWR, 1966).

Los Angeles County Well #4239H is located approximately 1700 feet southeast of the site (Figure 1). Depth to groundwater in the well was last measured May 1, 2003 at 214.2 feet bgs (LADPW, September 2003). Based on this data, the depth to groundwater beneath the Site is estimated to be approximately 200 feet bgs. Based on the regional topography the direction of groundwater flow in the Site vicinity is estimated to be south-southwest.

3.0 SCOPE OF WORK

The project was managed and field activities were supervised by URS personnel under the direction of a California Registered Geologist. The UST excavation and removal services were performed by URS subcontractor, Innovative Construction Solution (ICS), Inc., a state-licensed contractor with hazardous substance removal certification (License No. 764815). Nieto and Sons Trucking, Inc. was subcontracted by ICS to render the USTs inert, cut openings, pressure wash and triple rinse the interior of the USTs, and lift the USTs out of the excavation onto a flatbed truck for transportation and disposal. Methods utilized to excavate, remove, and dispose of the USTs are provided in the following sections.

3.1 HEALTH AND SAFETY PLAN

Prior to initiating the field activities, a site-specific health and safety plan was prepared that:

- Identified and described potentially hazardous substances that could have been encountered during field operations.
- Specified protective equipment and clothing for onsite activities.
- Outlined measures to be implemented in the event of an emergency.

Field personnel were required to review the health and safety plan prior to commencing with field activities. In addition, health and safety briefings were conducted during the course of field activities. A copy of the health and safety plan was kept onsite during field activities and is archived in the project files.

3.2 UTILITY CLEARANCE

In accordance with California Assembly Bill AB 73, Underground Services Alert (USA) was notified of our intent to conduct subsurface excavation at least 48 hours prior to initiation of intrusive field tasks. The proposed location of subsurface excavation was clearly marked with white paint as required by California Code 4216. USA contacted utility owners of record within the vicinity and notified them of our intention to conduct subsurface excavation in proximity to buried utilities. The utility owners of record, or their designated agents, clearly marked the position of their utilities on the ground surface throughout the area designated for excavation.

3.3 SITE SECURITY

The USTs were located on the southeast side of the truck maintenance facility (Figure 2). The Site has restricted access and is secured with fences, gates, and walls in excess of six feet tall and is not accessible to the public. Therefore, barricades and caution tape were used to delineate work zones, soil stockpiles, and open excavations within the secured loading dock area.

3.4 AIR MONITORING

Soil excavation during the UST removal was monitored in accordance with a South Coast Air Quality Management District (SCAQMD) Mitigation Plan (No. 406479) for excavation and handling VOC-impacted soils. Advance notifications were made to the SCAQMD by URS prior to startup. Soil monitoring records were maintained in accordance with AQMD Rule 1166. A copy of the SCAQMD Mitigation Plan and Rule 1166 Soil Monitoring Records are included as Appendix B. Continuous air monitoring was also conducted for worker safety.

3.5 UST EXCAVATION AND REMOVAL

Concrete overlying the UST was saw cut and removed during July 22, 2003. The removed concrete and asphalt was stockpiled onsite and subsequently disposed of as construction waste. Following concrete and asphalt removal, soil overlying the USTs was excavated using an excavator (Photographs 1 and 2). Soil excavation was conducted in accordance with SCAQMD Rule 1166 requirements (Appendix B). Excavated soil was placed on 6-millimeter polyethylene sheeting and were located a minimum distance of 4 feet from the edge of the excavation.

After the USTs were exposed and degassed, openings were cut on the tops of the USTs, and the interior of the USTs were pressure-washed and triple-rinsed (Photographs 3, 4, and 5). Following pressure washing, the USTs were inspected and determined to be non-hazardous for transportation and disposal by a certified marine chemist. A copy of the marine chemist certification is provided as Appendix C. A crane was used to lift the USTs out of the excavation, where they were cleaned of excess soil, and loaded onto a flatbed truck for transport to, and disposal at, Ecology Auto Parts in Santa Fe Springs, CA (Photographs 6 through 9). A copy of the certificate of destruction for the USTs is provided in Appendix D. The USTs appeared to be in good condition with no visible holes observed in the USTs during excavation and removal.

3.5.1 Piping and Dispenser Removal

The product and vent piping associated with the USTs were excavated with a backhoe, rinsed, and removed (Photographs 10, 11, and 12). The piping appeared to be in good condition with no visible holes observed in the piping. The removed piping was disposed with the USTs. Fuel dispensers were also removed from the site (Photograph 13).

3.5.2 Sampling Program

Soil samples were obtained from beneath the removed USTs, product piping, and fuel dispensers using an excavator or backhoe. Soil samples were collected from soil within the center of the excavator or backhoe bucket. Sampling equipment was cleaned using a dilute Alconox solution followed by rinsing with fresh water, final rinsing with distilled water, and air-drying. Soil samples analyzed for volatile organic compounds (VOCs) were collected using Encore™ samplers the current EPA method 5035 protocol required by the Regional Water Quality Control Board, Los Angeles Region (RWQCB).

Soil samples were properly sealed, labeled, and recorded on a chain of custody document (Appendix E). The sample labels affixed to the samples included the following information; sample designation, sample

number, sample depth, date, collector initials, site/client name, and time of collection. The sealed and labeled samples were placed in an ice chest maintained at a temperature of three to seven degrees centigrade and transported, under chain of custody, to Southland Technical Services, Inc. (STS) in Montebello California. STS is a California Department of Health Services accredited laboratory (Cert. No. 1986).

Soil samples were collected from beneath the removed USTs, product piping, and fuel dispensers during July 23, 2003. Six samples and one duplicate sample were collected underneath the former UST tanks at 17 feet bgs. Ten samples and one duplicate sample were collected from beneath the former fuel dispensers at 4 feet bgs with the exception of the sample taken beneath the satellite fuel dispenser #1, which was taken at 3 feet bgs. Three samples were collected from selected locations beneath removed product piping at depths of 3 to 5½ feet bgs. Two composite samples were taken from the excavated soil stockpile. The soil sample locations are shown on Figure 3.

3.5.3 Laboratory Analysis

The soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) and diesel fuel (TPHd), by EPA Method 8015M. The soil samples were also analyzed for volatile fuel constituents benzene, toluene, ethylbenzene, total xylenes (BTEX) and fuel oxygenates Methyl tert-Butyl Ether (MTBE), Di-isopropyl Ether (DIPE), Ethyl tert-butyl Ether (ETBE), tert-Amyl Methyl Ether (TAME) and tert-Butanol (TBA) by EPA Method 8260B.

A summary of soil analytical results is included as Table 1. Laboratory reports and chain-of-custody documentation are included as Appendix E. BTEX, DIPE, ETBE, TAME, and TBA, were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding FD5-4-030723 which contained 0.003 mg/kg of toluene. MTBE was detected in soil samples at concentrations ranging from 0.014 to 0.071 mg/kg at locations FD5-4-030723 and T1A-17-030723, respectively. TPHg was detected in three soil samples at concentrations ranging from 135 mg/kg to 305 mg/kg. TPHd was detected in six soil samples at concentrations ranging from 10 mg/kg to 6,340 mg/kg.

URS conducted a check of data completeness for the analytical laboratory reports. Results indicate "these data are usable, as qualified, for their intended purpose". A copy of URS's Data Validation Memo is included in Appendix F.

3.6 Excavation Of Soil

Additional soil excavation was conducted September 27, 2003 in the area of fuel dispensers 1 and 2, satellite fuel dispensers 2 and 3, and UST T2 (Figure 2) to remove accessible soil affected with petroleum hydrocarbons prior to backfilling and repaving. Soil was removed to a depth of several feet below the previous soil sampling locations. Soil beneath fuel dispensers 1 and 2 was removed to a depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 2 was removed to depth of approximately 9½ feet bgs. Soil beneath satellite fuel dispenser 3 was removed to a depth of approximately 8 feet bgs. Soil beneath removed UST T2 was removed to a depth of approximately 21 feet bgs. The areas of additional excavation are shown on Figure 4.

Following review of laboratory analytical results for soil samples collected September 27, 2003, An additional several feet of soil was removed from the areas of fuel dispenser 1 and 2 on September 28, 2003. Additional soil was removed from the bottom of the excavation to a depth of approximately 11 feet bgs.

Excavated soil was placed on, and covered with 6-millimeter polyethylene sheeting and located a minimum distance of 4 feet from the edge of the excavations. The soil was subsequently transported offsite to an appropriate disposal/recycling facility.

3.6.1 Confirmation Sampling Program

Soil samples were collected from the excavation during August 27 and 28, 2003. Five samples were collected in the vicinity of the former UST tank number 2. Sixteen samples were collected from beneath the former fuel dispensers at various depths. Three composite samples were taken from the excavated soil stockpile for disposal characterization. The soil sample locations for the fuel dispenser and UST excavations are shown on Figure 4.

Soil samples were collected from the sidewalls and bottoms of the excavations using an excavator or backhoe. Soil samples were collected from soil within the center of the excavator or backhoe bucket. Sampling equipment was cleaned using a dilute Alconox solution followed by rinsing with fresh water, final rinsing with distilled water, and air-drying. Soil samples analyzed for VOCs were collected using Encore™ samplers the current EPA method 5035 protocol required by the RWQCB.

Soil samples were properly sealed, labeled, and recorded on a chain of custody document as described in Section 3.5.2. The sealed and labeled samples were placed in an ice chest maintained at a temperature of three to seven degrees centigrade and transported, under chain of custody, to STS laboratories.

3.6.2 Laboratory Analysis

The soil samples were analyzed for TPHg and TPHd, by EPA Method 8015M. The soil samples were also analyzed for BTEX and MTBE by EPA Method 8021. MTBE detections were confirmed by EPA Method 8260B.

A summary of soil analytical results for the confirmation samples is provided as Table 2. Laboratory reports and chain-of-custody documentation are included as Appendix E. BTEX and MTBE were not detected at or above laboratory reporting limits in any of the soil samples collected, excluding T2A-21E-030827 which contained 0.021 mg/kg of MTBE. However, this sample was re-analyzed for MTBE by EPA method 8260B and the MTBE detection was not confirmed and therefore is not considered valid. TPHg was detected in soil sample collected at FD1/2-9.5B-030827 at concentration of 2.3 mg/kg. TPHd was detected in soil samples at concentrations ranging from 11 mg/kg to 481 mg/kg. It should be noted that additional soil was excavated in the area of the 481 mg/kg detection.

Laboratory reports and chain-of-custody documentation are included as Appendix E. URS conducted a check of data completeness for the analytical laboratory reports. Results indicate "these data are usable,

as qualified, for their intended purpose". A copy of URS's Data Validation Memo is included in Appendix F.

3.7 WASTE MANAGEMENT

The USTs, rinseate fluids, and excavated soils were disposed of at appropriate facilities as determined from field observations and waste profiling. Nieto and Sons Trucking, Inc. recovered approximately 750 gallons of water from the UST during the pressure wash and triple rinse. The rinseate water from the USTs and product piping was transported by Nieto and Sons Trucking, Inc. to DeMenno Kerdooon in Compton, California for disposal. A copy of the uniform hazardous waste manifest for the disposal of the rinseate water is provided as Appendix G.

Approximately 46 tons of petroleum hydrocarbon affected soil excavated from the areas of the UST T2 and fuel dispensers 1 and 2 and satellite fuel dispensers 2 and 3 was transported to Thermal Remediation Solutions in Azusa, California for disposal/recycling. The disposal/recycling certificate for the soil is provided as Appendix H.

3.8 BACKFILL AND RESURFACING

The UST and piping excavations were backfilled with stock piled soil from the UST excavation and clean, imported fill. The backfilled soil was compacted to 90% of relative maximum density. The soil compaction data is provided in Appendix I. The excavations were resurfaced with 6-inches of steel reinforced concrete (Photograph 14, 15, and 16).

4.0 DISCUSSION

Three 12,000 gallon USTs historically used to store diesel fuel and unleaded gasoline were removed from the Site July 22, 2003. Analyses results for soil samples collected during the UST removals identified areas beneath UST T2, fuel dispensers 1 and 2, and satellite fuel dispensers 2 and 3 with elevated concentrations of petroleum hydrocarbons. Additional soils were excavated from these areas on September 27 and 28, 2003.

Confirmation samples collected from the excavations indicate the residual concentrations of TPHd remaining in soil do not exceed 15 mg/kg. Residual concentrations of toluene remaining in soil do not exceed 0.003 mg/kg. Residual concentrations of MTBE remaining in soil do not exceed 0.071 mg/kg.

A variety of federal regulations that protect public health and the environment in California are directed by the United States Environmental Protection Agency (USEPA), Region 9. State of California regulations are directed by agencies such as the Department of Health Services (DHS), Department of Toxic Substances Control (DTSC), and the State Water Resources Control Board (SWRCB). USEPA Region 9 has established Preliminary Remediation Goals (PRGs) as tools for evaluating and cleaning up contaminated sites. Furthermore, California state agencies have developed additional cleanup guidance for contaminated soils and groundwater based on human health and ecological risk exposure. Various California cleanup guidance criteria for sites with soil and groundwater contamination typically factor in maximum contaminant levels (MCLs) for drinking water. General guidance criteria such as the USEPA Region 9 PRGs and California drinking water MCLs can be used as a benchmark for evaluating cleanup criteria for a site such as this.

The remaining BTEX and MTBE concentrations detected in soil beneath the former UST and fuel dispensing area of the site and the corresponding regulatory guidance criteria are listed below.

Petroleum Hydrocarbon Constituents Of Concern	Highest Detected Concentration in Soil (mg/kg)	USEPA Region 9 PRGs for Soil				California Drinking Water MCLs (mg/L)
		Health Risk		Protection of Groundwater		
		Res. (mg/kg)	Ind. (mg/kg)	DAF1 (mg/kg)	DAF20 (mg/kg)	
Benzene	<0.005	0.6	1.3	0.002	0.03	0.001
Toluene	0.003	520	520	0.6	12	0.15
Ethylbenzene	<0.005	8.9	20	0.7	13	0.7
Xylenes	<0.010	210	210	10	210	1.75
MTBE	0.071	17	36	--	--	0.013

-- = Not Available

The residual concentrations of toluene detected in soil are below USEPA PRGs and California Drinking Water MCLs. There are no published PRGs or Drinking Water MCLs for TPH. However, the residual concentrations of TPHd remaining in soil are several orders of magnitude below the Maximum Soil Screening Levels for Soils Above Drinking Water Aquifers provided in the *Interim Site Assessment and*

Cleanup Guidebook (RWQCB, 1996). The published soil screening levels for TPH have since been rescinded but are still observed by multiple oversight agencies.

The residual concentrations of MTBE detected in soil are below USEPA PRGs and above drinking water MCLs. Assuming the MTBE detections decrease to below detectable concentrations before 50 feet bgs, and the distance to groundwater is greater than 150 feet from the last MTBE detection, an average attenuation factor (AF) of 19 can be used based on Site lithology of 50% sand and 50% gravel (RWQCB, 1996). A Site specific soil cleanup screening level can be calculated by multiplying the AF by the MCL (19 x 0.013 mg/L). The resulting soil cleanup screening level of 0.247 mg/L is an order of magnitude higher than the residual MTBE concentration detected in soil onsite.

Based on this analysis the residual concentrations of TPHd, toluene, and MTBE are not human health or ecological risk, nor do they pose a threat to drinking water resources beneath the Site. URS recommends that no further regulatory action be required in relation to the removed USTs and fuel dispensing systems on the Site.

TPHd = Total Petroleum Hydrocarbonsas diesel range hydrocarbons by EPA Method 8015 (modified).

BTEX, MTBE, ETBE, DIPE, TAME, and TBA by EPA Method 8260B

MTBE - Methyl Tertiary Buthyl Ether

ETBE - Ethyl Tertiary Butyl Ether

DIPE - Di-isopropyl Ether

TAME - Tertiary Amyl Methyl Ether

TBA - Tertiary Butyl Alcohol
